## **Fallout An American Nuclear Tragedy:**

**Fallout** Philip L. Fradkin, 2004 Documents the story behind the story of the nuclear testing in southern Nevada during the 1950s when radioactive fallout drifted into surrounding communities First sheep began dying according to the author and then people The book places blame for the incident on all levels of government from presidents to radiation monitors The author is a Pulitzer Prize winning journalist Annotation copyrighted by Book News Inc Portland OR *A History of U.S. Nuclear Testing and Its Influence on Nuclear Thought, 1945-1963* David M. Blades, Joseph M. Siracusa, 2014-05-01 The story of U S nuclear testing between 1945 and 1963 is a vivid and exciting one but also one of profound importance It is a story of trailblazing scientific progress weapons of mass destruction superpower rivalry accidents radiological contamination politics and diplomacy The testing of weapons that defined the course and consequences of the Cold War was itself a crucial dimension to the narrative of that conflict Further the central question Why conduct nuclear tests was fully debated among American politicians generals civilians and scientists and ultimately it was victory for those who argued in favor of national security over diplomatic and environmental costs that normalized nuclear weapons tests *A History of U S Nuclear Testing and Its Influence on Nuclear Thought 1945 1963* is an examination of this question beginning with the road to normalization and later de normalization of nuclear testing leading to the Nuclear Test Ban Treaty in 1963 As states continue to pursue nuclear weaponry nuclear testing remains an important political issue in the twenty first century *Chernobyl and the Mortality Crisis in Eastern Europe and the Former USSR* José A. Tapia, 2022-09-20 Before the COVID 19 pandemic the mortality crisis which affected Eastern Europe and the republics of the former USSR at the time of the transition to a market economy was arguably the major peacetime health crisis of recent decades *Chernobyl and the Mortality Crisis in Eastern Europe and the Old USSR* discusses the importance of that crisis surprisingly underplayed in the scientific literature and presents evidence suggesting a potential role of the Chernobyl disaster among the causes contributing to it **Bombs in the Backyard** A. Constandina Titus, 2016-04-15 On January 27 1951 the first atomic weapon was detonated over a section of desert known as Frenchman Flat in southern Nevada providing dramatic evidence of the Nevada Test Site s beginnings Fifty years later author A Constandina Titus reviews contemporary nuclear policy issues concerning the continued viability of that site for weapons testing Titus has updated her now classic study of atomic testing with fifteen years of political and cultural history from the mid 1980s Reagan Gorbachev nuclear standoff to the authorization of the Nevada Test Site Research Center a Desert Research Institute facility scheduled to open in 2001 In this second edition of *Bombs in the Backyard* Titus deftly covers the post Cold War transformation of American atomic policy as well as our overarching cultural interest in all matters atomic making this a must read for anyone interested in atomic policy and politics **Transgressing Discourses** Michael Huspek, Gary P. Radford, 1997-07-17 The basic theme of this volume is excellent Readers are treated to fascinating explorations of communication at the boundaries between discourses and selves The essays address important theoretical

issues and do so often by treating significant social issues. Most welcome is the constructive tone that is for the most part maintained throughout the volume demonstrating an effort to understand, engage and critically assess different discourses and selves and others at once without valorizing one over the other. An essential theme running through this volume is the idea that our efforts to engage as well as other's efforts to engage us have been seriously impaired because of problems which are fundamentally communicative in nature. More specifically, there is general agreement among the contributors that the voice of other has not been sufficiently heard and this on account of how discourses of the human sciences as well as other dominant discourses e.g. law have structured our interaction with other. Each of the essays helps to clarify the nature of the communicative failing and to develop an appropriate corrective action.

*Seeing Nature Through Gender* Virginia Scharff, 2003. Environmental history has traditionally told the story of Man and Nature. Scholars have too frequently overlooked the ways in which their predominantly male subjects have themselves been shaped by gender. *Seeing Nature through Gender* here reintroduces gender as a meaningful category of analysis for environmental history showing how women's actions, desires and choices have shaped the world and seeing men as gendered actors as well. In thirteen essays that show how gendered ideas have shaped the ways in which people have represented, experienced and consumed their world, Virginia Scharff and her coauthors explore interactions between gender and environment in history. Ranging from colonial borderlands to transnational boundaries, from mountaintop to marketplace, they focus on historical representations of humans and nature on questions about consumption, environmental politics and on the complex reciprocal relations among human bodies and changing landscapes. They also challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with biologically different destinies. Each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly, often with dire consequences for other people and organisms. Here are considerations of the ways we study sexuality among birds of William Byrd's masking sexual encounters in his account of an eighteenth century expedition, of how the ecology of fire in a changing built environment has reshaped firefighters' own gendered identities. Some are playful as in a piece on the evolution of snow bunnies to shred bunnies. Others are dead serious as in a chilling portrait of how endocrine disruptors are reinventing humans, animals and water systems from the cellular level out. Aiding and adding significantly to the enterprise of environmental history, *Seeing Nature through Gender* bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we've engraved on ourselves and on the planet.

**Science, Geopolitics and Culture in the Polar Region** Professor Sverker Sörlin, 2013-10-28. Throughout the twentieth century, glaciologists and geophysicists from Denmark, Norway and Sweden made important scientific contributions across the Arctic and Antarctic. This research was of acute security and policy interest during the Cold War as knowledge of the polar regions assumed military importance. But scientists also helped make the polar regions Nordic spaces in a cultural and political sense with

scientists from Norden punching far above their weight in terms of population geographical size or economic activity This volume presents an image of Norden that stretches far beyond its conventional limits covering a vast area in the North Atlantic and the Arctic Sea as well as parts of Antarctica Rich in resources scarce in population but critically important in global and regional geopolitics these spaces were contested by major powers such as Russia the United States Canada and in the Antarctic Argentina Australia South Africa and others The empirical focus on Danish Norwegian and Swedish influence in the polar regions during the twentieth century embraces a diverse array of themes from the role of science in policy and diplomacy to the tensions between nationalism and internationalism with clear relevance to the important role science plays in contemporary discussions about Nordic engagement with the polar regions

**The First Atomic Bomb** Janet Farrell Brodie, 2023-06 2024 Southwest Book of the Year On July 16 1945 just weeks before the atomic bombing of Hiroshima and Nagasaki that brought about the surrender of Japan and the end of World War II the United States unleashed the world's first atomic bomb at the Trinity testing site located in the remote Tularosa Valley in south central New Mexico Immensely more powerful than any weapon the world had seen the bomb's effects on the surrounding and downwind communities of plants animals birds and humans have lasted decades In *The First Atomic Bomb* Janet Farrell Brodie explores the history of the Trinity test and those whose contributions have rarely if ever been discussed the men and women who constructed served and witnessed the first test as well as the downwinders who suffered the consequences of the radiation Concentrating on these ordinary people laborers ranchers and Indigenous peoples who lived in the region and participated in the testing Brodie corrects the lack of coverage in existing scholarship on the essential details and everyday experiences of this globally significant event *The First Atomic Bomb* also covers the environmental preservation of the Trinity test site and compares it with the wide range of atomic sites now preserved independently or as part of the new Manhattan Project National Historical Park Although the Trinity site became a significant node for testing the new weapons of the postwar United States it is known today as an officially designated National Historic Landmark Brodie presents a timely important and innovative study of an explosion that carries special historical weight in American memory

**Wastelanding** Traci Brynne Voyles, 2015-05-15 *Wastelanding* tells the history of the uranium industry on Navajo land in the U S Southwest asking why certain landscapes and the peoples who inhabit them come to be targeted for disproportionate exposure to environmental harm Uranium mines and mills on the Navajo Nation land have long supplied U S nuclear weapons and energy programs By 1942 mines on the reservation were the main source of uranium for the top secret Manhattan Project Today the Navajo Nation is home to more than a thousand abandoned uranium sites Radiation related diseases are endemic claiming the health and lives of former miners and nonminers alike Traci Brynne Voyles argues that the presence of uranium mining on Din Navajo land constitutes a clear case of environmental racism Looking at discursive constructions of landscapes she explores how environmental racism develops over time For Voyles the wasteland where toxic materials are excavated exploited and dumped is both a

racial and a spatial signifier that renders an environment and the bodies that inhabit it pollutable Because environmental inequality is inherent in the way industrialism operates the wasteland is the other through which modern industrialism is established In examining the history of wastelanding in Navajo country Voyles provides an environmental justice history of uranium mining revealing how just as civilization has been defined on and through savagery environmental privilege is produced by portraying other landscapes as marginal worthless and pollutable Inventing Los Alamos Jon

Hunner,2014-08-04 A social history of New Mexico s Atomic City Los Alamos New Mexico birthplace of the Atomic Age is the community that revolutionized modern weaponry and science An instant city created in 1943 Los Alamos quickly grew to accommodate six thousand people scientists and experts who came to work in the top secret laboratories others drawn by jobs in support industries and the families How these people as a community faced both the fevered rush to create an atomic bomb and the intensity of the subsequent cold war era is the focus of Jon Hunner s fascinating narrative history Much has been written about scientific developments at Los Alamos but until this book little has been said about the community that fostered them Using government records and the personal accounts of early residents *Inventing Los Alamos* traces the evolution of the town during its first fifteen years as home to a national laboratory and documents the town s creation the lives of the families who lived there and the impact of this small community on the Atomic Age *Desert Wind* Betty

Webb,2024-04-02 When P I Lena Jones s Pima Indian partner Jimmy Sisiwan is arrested in the remote northern Arizona town of Walapai Flats Lena rushes to his aid She finds a town up in arms over a new uranium mine located only ten miles from the magnificent Grand Canyon Jimmy s sister in law founder of Victims of Uranium Mining has been murdered and the opposing side is taking hits too Then Ike Donohue the mine s public relations flack is found shot to death casting suspicion on Jimmy and his entire family Lena finds not only a community decimated by dangerous mining practices but a connection to actor John Wayne and the mysterious deaths tied to the 1953 filming of *The Conqueror* Now it s up to Lena to uncover the decades old tragedy no one in Walapai Flats wants to discuss **Dirty Wars** John Beck,2009-12-01 Since World War II the American

West has become the nation s military arsenal proving ground and disposal site Through a wide ranging discussion of recent literature produced in and about the West *Dirty Wars* explores how the region s iconic landscapes invested with myths of national virtue have obscured the West s crucial role in a post World War II age of permanent war In readings of western particularly southwestern literature John Beck provides a historically informed account of how the military industrial economy established to protect the United States after Pearl Harbor has instead produced western waste lands and waste populations as the enemies and collateral casualties of a permanent state of emergency Beck offers new readings of writers such as Cormac McCarthy Leslie Marmon Silko Don DeLillo Rebecca Solnit Julie Otsuka and Terry Tempest Williams He also draws on a variety of sources in history political theory philosophy environmental studies and other fields Throughout *Dirty Wars* he identifies resonances between different experiences and representations of the West that allow us to think about

internment policies the manufacture of atomic weapons the culture of Cold War security border policing and toxic pollution as part of a broader program of a sustained and invasive management of western space      **Military Power and Popular Protest** Katherine T. McCaffrey, 2002 Katherine T McCaffrey gives a complete analysis of the troubled relationship between the U S Navy and island residents She explores such topics as the history of U S naval involvement in Vieques a grassroots mobilization led by fishermen that began in the 1970s how the navy promised to improve the lives of the island residents and failed and the present day emergence of a revitalized political activism that has effectively challenged naval hegemony

**Building Sustainable Communities** , 2006-01-01 In this inter disciplinary follow up to Future as Fairness Ecological Justice and Global Citizenship edited by Haugestad and Wulfhorst Rodopi 2004 14 chapters explore a variety of conceptual and practical pathways to the building of sustainable communities Five chapters provide different perspectives on sustainable and unsustainable agriculture Other cases explored are wildlife valuations distributional effects of environmental policy the emerging American nuclear power renaissance regulation of care use job losses with a raising GDP cooperation between labour and environmentalists plant biotechnology participatory decision making acoustic ecology decent competition and fractality as a key to global citizenship and ecological justice The introduction sketches a framework for constructive evaluation of the interrelationships between environmental sustainability economic sustainability communities and social interactions      **Proving Grounds** Edwin A. Martini, 2015-05-01 Proving Grounds brings together a wide range of scholars across disciplines and geographical borders to deepen our understanding of the environmental impact that the U S military presence has had at home and abroad The essays in this collection survey the environmental damage caused by weapons testing and military bases to local residents animal populations and landscapes and they examine the military s efforts to close and repurpose bases often as wildlife reserves Together they present a complex and nuanced view that embraces the ironies contradictions and unintended consequences of U S militarism around the world In complicating our understanding of the American military s worldwide presence the essayists also reveal the rare cases when the military is actually ahead of the curve on environmental regulation compared to the private sector The result is the most comprehensive examination to date of the U S military s environmental footprint for better or worse across the globe      Final Report United States. Advisory Committee on Human Radiation Experiments, 1995      Advisory Committee on Human Radiation Experiments United States. Advisory Committee on Human Radiation Experiments, 1995      *Downwind of the Atomic State* James C. Rice, 2025-04 2024 Outstanding Academic Title given by Choice Reviews How the scientific community overlooked ignored and denied the catastrophic fallout of decades of nuclear testing in the American West In December of 1950 President Harry Truman gave authorization for the Atomic Energy Commission to conduct weapons tests and experiments on a section of a Nevada gunnery range Over the next eleven years more than a hundred detonations were conducted at the Nevada Test Site and radioactive debris dispersed across the communities just downwind and through much of the country In

this important work James C Rice tells the hidden story of nuclear weapons testing and the negligence of the US government in protecting public health Downwind of the Atomic State focuses on the key decisions and events shaping the Commission's mismanagement of radiological contamination in the region specifically on how the risks of fallout were defined and redefined or importantly not defined at all owing to organizational mistakes and the impetus to keep atomic testing going at all costs Rice shows that although Atomic Energy Commission officials understood open air detonations injected radioactive debris into the atmosphere they did not understand or seem to care that the radioactivity would irrevocably contaminate these communities The history of the atomic Southwest should be a wake up call to everyone living in a world replete with large complex organizations managing risky technological systems The legacy of open air detonations in Nevada pushes us to ask about the kinds of risks we are unwittingly living under today What risks are we being exposed to by large organizations under the guise of security and science

Rachel Carson Linda Lear, 2009-04-01 The authoritative biography of the marine biologist and nature writer whose book Silent Spring inspired the global environmentalist movement In a career that spanned from civil service to unlikely literary celebrity Rachel Carson became one of the world's seminal leaders in conservation The 1962 publication of her book Silent Spring was a watershed event that led to the banning of DDT and launched the modern environmental movement Growing up in poverty on a tiny Allegheny River farm Carson attended the Pennsylvania College for Women on a scholarship There she studied science and writing before taking a job with the newly emerging Fish and Wildlife Service In this definitive biography Linda Lear traces the evolution of Carson's private professional and public lives from the origins of her dedication to natural science to her invaluable service as a brilliant if reluctant reformer Drawing on unprecedented access to sources and interviews Lear masterfully explores the roots of Carson's powerful connection to the natural world crafting a fine portrait of the environmentalist as a human being Smithsonian Impressively researched and eminently readable Compelling not just for Carson devotees but for anyone concerned about the environment People A combination of meticulous scholarship and thoughtful often poignant writing Science A sweeping analytic first class biography of Rachel Carson Kirkus Reviews

**Inevitably Toxic** Brinda Sarathy, Janet Brodie, Vivien Hamilton, 2018-10-30 Not a day goes by that humans aren't exposed to toxins in our environment be it at home in the car or workplace But what about those toxic places and items that aren't marked Why are we warned about some toxic spaces substances and not others The essays in Inevitably Toxic consider the exposure of bodies in the United States Canada and Japan to radiation industrial waste and pesticides Research shows that appeals to uncertainty have led to social inaction even when evidence e.g the link between carbon emissions and global warming stares us in the face In some cases influential scientists engineers and doctors have deliberately manufactured doubt and uncertainty but as the essays in this collection show there is often no deliberate deception We tend to think that if we can't see contamination and experts deem it safe then we are okay Yet having knowledge about the uncertainty behind expert claims can awaken us from a false sense of security

and alert us to decisions and practices that may in fact cause harm In the epilogue Hamilton and Sarathy interview Peter Galison a prominent historian of science whose recent work explores the complex challenge of long term nuclear waste storage
