Grant Luckhardt, William Bechtel, Grant Luckhardt, 2014-01-02 In the past 15 years a host of critical thinking books have appeared that teach students to find flaws in the arguments of others by learning to detect a number of informal fallacies This book is not in that tradition The authors of this book believe that while students learn to become vicious critics they still continue to make the very mistakes they criticize in others Thus this book has adopted the approach of teaching the construction of good arguments first and then introducing criticism as a secondary skill Moreover the emphasis of the book is not on learning to name fallacies but on being able to identify weaknesses in an argument so as to be able to construct an effective critique of that argument The book is accompanied by a workbook featuring a wealth of examples to help students acquire the material **Exercise Book to Accompany How to Do Things with Logic** C. Philoponus: On Aristotle Posterior Analytics 1.9-18 Philoponus, 2014-04-22 In this part of the Posterior Analytics Aristotle elaborates his assessment of how universal truths of science can be scientifically explained as inevitable in demonstrative proofs But he introduces complications some sciences discuss phenomena that can only be explained by higher sciences and again sometimes we reason out a cause from an effect rather than an effect from a cause Philoponus takes these issues further Reasoning from particular to universal is the direction taken by induction and in mathematics reasoning from a theorem to the higher principles from which it follows is considered particularly valuable It corresponds to the direction of analysis as opposed to synthesis This volume contains an English translation of Philoponus commentary a detailed introduction extensive explanatory notes and a bibliography
