

# Why Heavy Flavor Physics?

- The first flavor of new phenomena often comes from flavor physics
  - Weak decays of light hadrons => existence of charm quark
  - CP violation => 3<sup>rd</sup> quark family
  - B0 oscillation => heavy top quark
- B mesons are especially suitable for beyond SM searches
  - Large mass of b quark – stronger coupling to new particles
  - Abundant production
  - Well developed technique of experimental selection

## Heavy Flavor Physics:

Heavy Flavor Physics - Proceedings Of The Seventh International Symposium Claudio Campagnari, 1999-11-15 The physics of heavy flavors is a very active area of research in experimental and theoretical high energy physics A number of heavy flavor experiments at new or upgraded accelerators are just coming on line to address some of the most fundamental questions of particle physics e g matter anti matter asymmetry CP violation The Seventh International Symposium on Heavy Flavor Physics focused primarily on the physics of bottom and charmed quarks but there were also sessions on the top quark and the tau lepton It presented a great opportunity to take stock of the field on the eve of the new era in heavy flavor physics which will be opened up by the next generation of experiments **Heavy Flavours II** A. J. Buras, Manfred Lindner, 1998

This volume is a collection of review articles on the most outstanding topics in heavy flavour physics All the authors have made significant contributions to this field The book reviews in detail the theoretical structure of heavy flavour physics and confronts the Standard Model and some of its extensions with existing experimental data This new edition covers new trends and ideas and includes the latest experimental information Compared to the previous edition interesting new activities are included and some of the key contributions are updated Particular attention is paid to the discovery of the top quark and the determination of its mass **Heavy Flavor Physics** Anders Ryd, Frank C. Porter, 2002-05-24 The conference covered both the experimental and theoretical progress in the field of heavy quark physics and is of interest to readers who wish to stay current with the forefront of research in this field

Heavy Flavours F. Grancagnolo, F.-L. Navarria, 2016-06-04 Heavy Flavors covers the proceedings of the Third Topical Seminar on Heavy Flavors held in San Miniato Italy on June 17 21 1991 The book focuses on the reactions properties characteristics and transformations of heavy flavors The publication first offers information on flavor factories and monochromatization as the way to maximum luminosity B factories as well as design strategies and parameters requirements luminosity limitations and B factory with monochromatization and vertical separation The book then ponders on theoretical results in heavy quark hadroproduction heavy flavor production at high energies and leptonic decay constants of heavy mesons The book examines heavy baryon transitions and the heavy quark effective theory non universality of nucleon sea distributions probed by neutrinos and muons and heavy flavor physics at hadron colliders The publication is a dependable reference for readers interested in the study of heavy flavors **Heavy**

**Quark, Heavy Flavor Physics And Symmetry Breaking, The - Proceedings Of The Xxiii International Meeting On Fundamental Physics**

Teresa Rodrigo, Antonio Ruiz, 1996-03-31 This meeting discussed the experimental results and theoretical aspects in the field of high energy physics with special reference to the top quark observation heavy flavor physics and symmetry breaking mechanisms The major topics are developed in a series of course lectures *Lectures on Heavy Flavor Physics*, 2002 These lectures are intended as an introduction to flavor physics for graduate students in experimental high energy physics In these four lectures the basic ideas and of the subject and some current issues are presented but no attempt is made to teach calculational techniques and methods **Heavy Flavour Physics Theory and Experimental Results in Heavy Quark Physics** C.T.H Davies, 2019-03-29 This book provides a thorough introduction to the phenomenology of heavy flavour physics those working on the B factories LHCb BTeV HERA and the Tevatron It explains how heavy quark theory could be implemented on the lattice and discusses the status of CP violation in the neutral kaon system

**Heavy Flavor Physics at Hadron Colliders**, 1991 The search for the top quark has dominated heavy flavor physics at hadron colliders For Standard model decay of top the present mass limit in  $m_{\text{sub } t} 89 \text{ GeV } 95\% \text{ C L}$  Bottom production cross sections are quite large at hadron colliders thus providing enough statistics for extensive studies Results on cross sections  $B \rightarrow B$  mixing exclusive channels and rare B decays will be summarized **The Top Quark, Heavy Flavor Physics and Symmetry Breaking** T. Würenlingen; Villigen, 1988 Recent Heavy Flavor Physics Results from Fixed Target Experiments, 1991 Recent results from fixed target experiments in the field of heavy quark flavors as published or otherwise disseminated in the last year are reviewed Emphasis is placed on distilling the main conclusions from these results 35 refs 5 figs 4 tabs *Proceedings of the 5th International Symposium on Heavy Flavour Physics, Montréal, Canada, July 6-10, 1993* D. The Top Quark, Heavy Flavor Physics and Symmetry Breaking T. Rodrigo, A. Ruiz, 1996 QCD and Heavy Flavor Physics at High Energy, 1999 This talk summarizes recent results from the Tevatron Collider and HERA on QCD and Heavy Flavor physics *Flavor Physics and the TeV Scale* George W. S. Hou, 2019-04-13 The second edition of this monograph discusses the usefulness of heavy flavor as a probe of TeV scale physics exploring a number of recently uncovered flavor anomalies that are suggestive of possible TeV scale phenomena The large human endeavor at the Large Hadron Collider has not turned up any New Physics except the last particle of the Standard Model the Higgs boson Revised and updated throughout this book puts the first results from the LHC into perspective and provides an outlook for a new era of flavor physics The author readdresses many questions raised in the first edition and poses new ones As before the experimental perspective is taken with a focus on processes rather than theories or models as a basis for exploration and two thirds of the book is concerned with  $b \rightarrow s$  or  $b \rightarrow s b$  transitions In the face of the advent of Belle II and other flavor experiments this book becomes a part of a dialogue between the energy collider and

intensity flavor frontiers that will continue over the coming decade Researchers with an interest in modern particle physics will find this book particularly valuable Heavy Flavor Physics Beijing Institute of Modern Physics,1989 **Spring School "On Heavy Flavor Physics"** Paul-Scherrer-Institut (Würenlingen; Villigen),Lyceum Alpinum Zuoz,1988 **Heavy Flavor Physics** ,1989 *Heavy Flavour Physics* I. I. Bigi,Luigi Moroni,Società italiana di fisica,1998 The lectures collected in this book present a comprehensive review of the current knowledge of heavy quark physics from the points of view of both theory and experiment Heavy Flavour Physics has accomplished enormous progress during the last few years the last heavy quark has been discovered and the quality of the collected data on the other relatively lighter quarks has dramatically improved On the theory side noticeable progress has been reported on new calculations of decay rates based on various techniques such as QCD sum rules heavy quark mass expansion and lattice QCD The theory of heavy quark production is constantly improving and awaiting new results Nevertheless there are strong reasons to believe that the Standard Model of High Energy Physics is incomplete It exhibits very peculiar patterns for which it offers no explanation The basic constituents of matter are arranged into three seemingly identical generations or families of quarks and leptons differing merely in their masses The pattern in the fermion masses why they are families and why there are three of them is not yet understood Furthermore it is known that at least within the standard model there is an intimate connection between the replication of families and the gateway of CP violation in addition the latter phenomenon is a crucial ingredient in explaining why our universe is made up almost exclusively of matter rather than being more or less matter antimatter symmetric How and to what extent can Heavy Flavour Physics impact on these questions Does it offer novel windows onto New Physics beyond the Standard Model in general and onto new symmetries such as Supersymmetry in particular These questions constitute the central theme of this book The material treated in this publication may serve as reference for the segment of the high energy community actively engaged in heavy quark physics
