    Heights of Polynomials and Entropy in Algebraic Dynamics Graham Everest,Thomas Ward,2014-01-15   *Heights of Polynomials and Entropy in Algebraic Dynamics* Graham Everest,Thomas Ward,2013-06-29 Arithmetic geometry and algebraic dynamical systems are flourishing areas of mathematics Both subjects have highly technical aspects yet both of fer a rich supply of down to earth examples Both have much to gain from each other in techniques and more importantly as a means for posing and sometimes solving outstanding problems It is unlikely that new graduate students will have the time or the energy to master both This book is in tended as a starting point for either topic but is in content no more than an invitation We hope to show that a rich common vein of ideas permeates both areas and hope that further exploration of this commonality will result Central to both topics is a notion of complexity In arithmetic geome try height measures arithmetical complexity of points on varieties while in dynamical systems entropy measures the orbit complexity of maps The con nections between these two notions in explicit examples lie at the heart of the book The fundamental objects which appear in both settings are polynomi als so we are concerned principally with heights of polynomials By working with polynomials rather than algebraic numbers we avoid local heights and p adic valuations   **Geometric Methods in Algebra and Number Theory** Fedor Bogomolov,Yuri Tschinkel,2006-06-22 Contains a selection of articles exploring geometric approaches to problems in algebra algebraic geometry and number theory The collection gives a representative sample of problems and most recent results in algebraic and arithmetic geometry Text can serve as an intense introduction for graduate students and those wishing to pursue research in algebraic and arithmetic geometry   The Arithmetic of Dynamical Systems J.H. Silverman,2010-05-05 This book is designed to provide a path for the reader into an amalgamation oftwo venerable areas ofmathematics Dynamical Systems and Number Theory Many of the motivating theorems and conjectures in the new subject of Arithmetic Dynamics may be viewed as the transposition ofclassical results in the theory ofDiophantine equations to the setting of discrete dynamical systems especially to the iteration theory ofmaps on the projective line and other algebraic varieties Although there is no precise dictionary connecting the two areas the reader will gain a flavor of the correspondence from the following associations Diophantine Equations Dynamical Systems rational and integral rational and integral points on varieties points in orbits torsion points on periodic and preperiodic abelian varieties points ofrational maps There are a variety of topics covered in this volume but inevitably the choice reflects the author s tastes and interests Many related areas that also fall under the heading ofarithmetic or algebraic dynamics have been omitted in order to keep the book to a manageable length A brief list of some of these omitted topics may be found in the introduction Online Resources The reader will find additonal material references and errata at http www math brown ectu jhs ADSHome html Acknowledgments The author has consulted a great many sources in writing this book Every attempt has been made to give proper attribution for all but the most standard results   *From Analysis to Visualization* David H. Brent,Regina S. Burachik,Judy-anne Heather Osborn,Brailey Sims,Qiji J. Zhu,2020-03-16 Students and researchers from all fields of mathematics are invited to read and treasure this special Proceedings A conference was held 25 29 September 2017 at Noah s On the Beach Newcastle Australia to commemorate the life and work of Jonathan M Borwein a mathematician extraordinaire whose untimely passing in August 2016 was a sorry loss to mathematics and to so many members of its community a loss that continues to be keenly felt A polymath Jonathan Borwein ranks among the most wide ranging and influential mathematicians of the last 50 years making significant contributions to an exceptional diversity of areas and substantially expanding the use of the computer as a tool of the research mathematician The contributions in this commemorative volume probe Dr Borwein s ongoing legacy in areas where he did some of his most outstanding work Applied Analysis Optimization and Convex Functions Mathematics Education Financial Mathematics plus Number Theory Special Functions and Pi all tinged by the double prisms of Experimental Mathematics and Visualization methodologies he championed **Noise, Oscillators and Algebraic Randomness** Michel Planat,2008-01-11 Noise is ubiquitous in nature and in man made systems Noise in oscillators perturbs high technology devices such as time standards or digital communication systems The understanding of its algebraic structure is thus of vital importance The book addresses both the measurement methods and the understanding of quantum 1 f and phase noise in systems such as electronic amplifiers oscillators and receivers trapped ions cosmic ray showers and in commercial applications A strong link between 1 f noise and number theory is emphasized The twenty papers in the book are comprehensive versions of talks presented at a school in Chapelle des Bois Jura France held from April 6 to 10 1999 by engineers physisicts and mathematicians **Number Theory and Polynomials** James Fraser McKee,Chris Smyth,2008-05-08 Contributions by leading experts in the field provide a snapshot of current progress in polynomials and number theory *Foliations: Dynamics, Geometry and Topology* Masayuki Asaoka,Aziz El Kacimi Alaoui,Steven Hurder,Ken Richardson,2014-10-07 This book is an introduction to several active research topics in Foliation Theory and its connections with other areas It contains expository lectures showing the diversity of ideas and methods converging in the study of foliations The lectures by Aziz El Kacimi Alaoui provide an introduction to Foliation Theory with emphasis on examples and transverse structures Steven Hurder s lectures apply ideas from smooth dynamical systems to develop useful concepts in the study of foliations limit sets and cycles for leaves leafwise geodesic flow transverse exponents Pesin Theory and hyperbolic parabolic and elliptic types of foliations The lectures by Masayuki Asaoka compute the leafwise cohomology of foliations given by actions of Lie groups and apply it to describe deformation of those actions In his lectures Ken Richardson studies the properties of transverse Dirac operators for Riemannian foliations and compact Lie group actions and explains a recently proved index formula Besides students and researchers of Foliation Theory this book will be interesting for mathematicians interested in the applications to foliations of subjects like Topology of Manifolds Differential Geometry Dynamics Cohomology or Global Analysis Discourses on Algebra Igor R.

Shafarevich,2012-12-06 I wish that algebra would be the Cinderella ofour story In the math ematics program in schools geometry has often been the favorite daugh ter The amount of geometric knowledge studied in schools is approx imately equal to the level achieved in ancient Greece and summarized by Euclid in his Elements third century B C For a long time geom etry was taught according to Euclid simplified variants have recently appeared In spite of all the changes introduced in geometry cours es geometry retains the influence of Euclid and the inclination of the grandiose scientific revolution that occurred in Greece More than once I have met a person who said I didn t choose math as my profession but I ll never forget the beauty of the elegant edifice built in geometry with its strict deduction of more and more complicated propositions all beginning from the very simplest most obvious statements Unfortunately I have never heard a similar assessment concerning al gebra Algebra courses in schools comprise a strange mixture of useful rules logical judgments and exercises in using aids such as tables of log arithms and pocket calculators Such a course is closer in spirit to the brand of mathematics developed in ancient Egypt and Babylon than to the line of development that appeared in ancient Greece and then con tinued from the Renaissance in western Europe Nevertheless algebra is just as fundamental just as deep and just as beautiful as geometry

Number Theory, Analysis and Geometry Dorian Goldfeld,Jay Jorgenson,Peter Jones,Dinakar Ramakrishnan,Kenneth Ribet,John Tate,2011-12-20 In honor of Serge Lang s vast contribution to mathematics this memorial volume presents articles by prominent mathematicians Reflecting the breadth of Lang s own interests and accomplishments these essays span the field of Number Theory Analysis and Geometry *Topics in Algebraic and Noncommutative Geometry* Ruth Ingrid Michler,2003 This book presents the proceedings of two conferences Resolution des singularites et geometrie non commutative and the Annapolis algebraic geometry conference Research articles in the volume cover various topics of algebraic geometry including the theory of Jacobians singularities applications to cryptography and more The book is suitable for graduate students and research mathematicians interested in algebraic geometry **Progress in Approximation Theory and Applicable Complex Analysis** Narendra Kumar Govil,Ram Mohapatra,Mohammed A. Qazi,Gerhard Schmeisser,2017-04-03 Current and historical research methods in approximation theory are presented in this book beginning with the 1800s and following the evolution of approximation theory via the refinement and extension of classical methods and ending with recent techniques and methodologies Graduate students postdocs and researchers in mathematics specifically those working in the theory of functions approximation theory geometric function theory and optimization will find new insights as well as a guide to advanced topics The chapters in this book are grouped into four themes the first polynomials Chapters 1 8 includes inequalities for polynomials and rational functions orthogonal polynomials and location of zeros The second inequalities and extremal problems are discussed in Chapters 9 13 The third approximation of functions involves the approximants being polynomials rational functions and other types of functions and are covered in Chapters 14 19 The last theme quadrature cubature and applications comprises the final three chapters and includes an article

coauthored by Rahman This volume serves as a memorial volume to commemorate the distinguished career of Qazi Ibadur Rahman 1934 2013 of the Universit de Montr al Rahman was considered by his peers as one of the prominent experts in analytic theory of polynomials and entire functions The novelty of his work lies in his profound abilities and skills in applying techniques from other areas of mathematics such as optimization theory and variational principles to obtain final answers to countless open problems *Algebraic Combinatorics* Peter Orlik,Volkmar Welker,2007-07-23 This book is based on two series of lectures given at a summer school on algebraic combinatorics at the Sophus Lie Centre in Nordfjordeid Norway in June 2003 one by Peter Orlik on hyperplane arrangements and the other one by Volkmar Welker on free resolutions Both topics are essential parts of current research in a variety of mathematical fields and the present book makes these sophisticated tools available for graduate students *Research Directions in Number Theory* Alina Bucur,Wei Ho,Renate Scheidler,2024-06-26 This is the fifth proceedings volume published under the Women in Numbers umbrella The WIN workshops and their proceedings volumes are part of the WIN network aimed at highlighting the research of women and gender minorities in number theory as well as increasing their participation and boosting their potential collaborations in number theory and related fields The volume contains research articles in the mathematical area of number theory written by teams of scholars at all levels in the field More information about the network its goals and purpose past and future conferences and past proceedings volumes can be found on the WIN website This volume contains research outcomes and results produced by the collaborative research groups created under the Women in Numbers V workshop the 5th in its series The actual workshop was to take place in 2020 at the Banff International Research Station in Banff Canada but could not take place onsite due to COVID The associated research groups each consisting of 1 2 leaders and 2 4 junior researchers were formed nevertheless and their collaborations went ahead in purely virtual form as well as other papers by author teams for which at least 50% of the authors identify as women or gender minorities These contributions include original research and survey articles in a wide variety of subareas within number theory The former present new cutting edge research that will be of interest to experts in the field to the benefit of their own research The survey articles serve as an accessible introduction for graduate students and other readers to areas of number theory that may be outside their area of expertise *Algebraic Cycles and Motives: Volume 2* Jan Nagel,Chris Peters,2007-05-03 A self contained account of the subject of algebraic cycles and motives as it stands **Dynamical Numbers: Interplay between Dynamical Systems and Number Theory** S. F. Koli□a□da,2010 This volume contains papers from the special program and international conference on Dynamical Numbers which were held at the Max Planck Institute in Bonn Germany in 2009 These papers reflect the extraordinary range and depth of the interactions between ergodic theory and dynamical systems and number theory Topics covered in the book include stationary measures systems of enumeration geometrical methods spectral methods and algebraic dynamical systems *Lectures on Partial Differential Equations* Vladimir I. Arnold,2013-06-29 Choice Outstanding

Title January 2006 Like all of Vladimir Arnold s books this book is full of geometric insight Arnold illustrates every principle with a figure This book aims to cover the most basic parts of the subject and confines itself largely to the Cauchy and Neumann problems for the classical linear equations of mathematical physics especially Laplace s equation and the wave equation although the heat equation and the Korteweg de Vries equation are also discussed Physical intuition is emphasized A large number of problems are sprinkled throughout the book and a full set of problems from examinations given in Moscow are included at the end Some of these problems are quite challenging What makes the book unique is Arnold s particular talent at holding a topic up for examination from a new and fresh perspective He likes to blow away the fog of generality that obscures so much mathematical writing and reveal the essentially simple intuitive ideas underlying the subject No other mathematical writer does this quite so well as Arnold **Postmodern Analysis** Jürgen Jost,2013-03-09 What is the title of this book intended to signify what connotations is the adjective Postmodern meant to carry A potential reader will surely pose this question To answer it I should describe what distinguishes the approach to analysis presented here from what has been called Modern Analysis by its protagonists Modern Analysis as represented in the works of the Bour baki group or in the textbooks by Jean Dieudonne is characterized by its systematic and axiomatic treatment and by its drive towards a high level of abstraction Given the tendency of many prior treatises on analysis to degen erate into a collection of rather unconnected tricks to solve special problems this definitely represented a healthy achievement In any case for the de velopment of a consistent and powerful mathematical theory it seems to be necessary to concentrate solely on the internal problems and structures and to neglect the relations to other fields of scientific even of mathematical study for a certain while Almost complete isolation may be required to reach the level of intellectual elegance and perfection that only a good mathematical theory can acquire However once this level has been reached it might be useful to open one s eyes again to the inspiration coming from concrete ex ternal problems **Sheaves in Topology** Alexandru Dimca,2012-12-06 Constructible and perverse sheaves are the algebraic counterpart of the decomposition of a singular space into smooth manifolds This introduction to the subject can be regarded as a textbook on modern algebraic topology treating the cohomology of spaces with sheaf as opposed to constant coefficients The author helps readers progress quickly from the basic theory to current research questions thoroughly supported along the way by examples and exercises *Option Theory with Stochastic Analysis* Fred Espen Benth,2012-12-06 This is a very basic and accessible introduction to option pricing invoking a minimum of stochastic analysis and requiring only basic mathematical skills It covers the theory essential to the statistical modeling of stocks pricing of derivatives with martingale theory and computational finance including both finite difference and Monte Carlo methods
