The Economics and Policy of Concentrating Solar Power Generation Pere Mir-Artigues, Pablo del Río, Natàlia Caldés, 2019-05-31 This book provides an up to date analysis of state of the art concentrating solar power CSP generation It focuses on the economic analysis of CSP generation technologies as well as the policies that have been and are being used around the globe to support it The book describes the industrial sectors whose products make up the solar field including the traditional manufacturers of turbines and generators The authors provide the main theoretical tools needed to comprehend the costs of CSP technologies compared to other competing technologies both conventional and renewable and discuss the conceptual rationale behind creating public support for these technologies and the costs of various promotional techniques Further the book examines the concepts from different disciplinary traditions in economics including environmental innovation industrial and public which are then combined and integrated for an analysis of the costs and policies of CSP electricity Addressing the main findings and the challenges for future CSP the book is a valuable resource for researchers and practitioners It is also of use to industrial engineers as it identifies the features of the sector s supply chain value rooted in and supported by an industrial economics approach *Renewable Electricity - Generation Technologies* Great Britain: Parliament: House of Commons: Innovation, Universities, Science and Skills Committee, 2008 The European Union s EU common Energy Policy commits the EU to generating 20 per cent of total energy consumption from renewables by 2020 The European Commission proposed national renewable energy targets for each Member State and it was suggested that 15 per cent of UK energy be derived from renewables by 2020 **Technology Options for Electricity Generation** Hadi Dowlatabadi, Michael A. Toman, 2016-03-22 Environmental constraints and market uncertainties create new challenges for electricity generation In this title originally published in 1991 the authors present a simulation model with a capability for highly detailed activity to identify cost minimising investment options under different assumptions about demand costs regulation and other economic and environmental factors Applying the model to two U S regions having sharply different electricity demand and supply characteristics they identify the importance of advanced technologies and augmented electricity trade among regions This title is ideal for students interested in environmental studies [Energy Abstracts for Policy Analysis](#) , 1988 [Hybrid Technologies for Power Generation](#) Massimiliano Lo Faro, Orazio Barbera, Giosue Giacoppo, 2021-10-30 Hybrid Technologies for Power Generation addresses the topics related to hybrid technologies by coupling conventional thermal engines with novel technologies including fuel cells batteries thermal storage and electrolysis and reporting on the most recent advances concerning transport and stationary applications Potential operating schemes of hybrid power generation systems are covered highlighting possible combinations of technology and guideline selection according to the energy demands of end users Going beyond state of the art technological developments for processes devices and systems this book discusses the environmental impact and existing hurdles of moving from a single device to new

approaches for efficient energy generation transfer conversion high density storage and consumption By describing the practical viability of novel devices coupled to conventional thermal devices this book has a decisive impact in energy system research supporting those in the energy research and engineering communities Covers detailed thermodynamic requirements for multiple smart technologies included in hybrid systems i e FC electrolyzers supercapacitors batteries thermal storage etc Features fundamental analysis and modeling to optimize the combination of smart technologies with traditional engines Details protocols for the analysis operation and requirements of large scale production

The Political Economy of Electricity Mark Cooper, 2017-04-24 Providing critical insights that will interest readers ranging from economists to environmentalists policymakers and politicians this book analyzes the economics and technology trends involved in the dilemma of decarbonization and addresses why aggressive policy is required in a capitalist political economy to create a sea change away from fossil fuels The environmental damage across the globe is a result of the success of capitalist industrialism 250 years of carbon pollution resulting from consumption of fossil fuels to drive the economy and the worldwide aspiration to ever increasing levels of economic development But capitalism has also produced the tools to solve the problems it has created in the form of a technological revolution in low carbon renewables distributed resources and intelligent systems to integrate supply and demand This book comprehensively examines the political economy of electricity and analyzes the challenge of transforming today s electricity sector to meet the dual goals of decarbonization and development expressed in the Paris Agreement Author Mark Cooper defines the dilemma of development and decarbonization as the great challenge facing the electricity industry and documents how the economic resources costs of a 100 percent renewable portfolio has declined to the point that decarbonization can pay for itself making the low carbon renewable technologies that enable desired environmental and public health benefits an easy sell He identifies the substantial benefit of increasing use of information communications and advanced control technologies shows how targeted innovation could speed the transition by a decade or two and lower the overall cost of the transition by as much as half and explains why the flexible multi stakeholder approach of the Paris Agreement is the correct approach
