**Electron Microscopy in Forensic, Occupational, and Environmental Health Sciences** Samarendra Basu, James R. Millette, 2012-12-06 Forensic Occupational and Environmental Health Sciences are identification sciences dealing with criminal and delicate societal problems for which scanning electron microscopy SEM with energy dispersive x rays EDAX and analytical transmission electron microscopy TEM are providing increasingly definitive solutions This is particularly true in the area of particulates However electron microscopists working independently in these three related fields are often called upon to identify particulates which have been well characterized by microscopists in one of the other fields of study Exchange of information on particulate identification and techniques for analyzing new unusual samples has been difficult between the three disciplines For example automated search and identification of particulates has become a standard procedure in environmental and occupational health The procedure however has yet to find its way into forensic laboratories for analysis of gunshot residue particles This volume represents a beginning for collaboration and exchange of ideas between such areas of study with diverse interests but similar analytical problems It is virtually certain that this effort will also interest other electron microscopists in some novel scientific problems with criminal and societal relevance The volume presents full length articles of several invited speakers and participants at the Forensic Occupational and Environmental Health Sciences Symposium held as a part of the EMSA MAS Joint Annual Meeting 5 9 August 1985 Louisville Kentucky Extended 2 4 page abstracts of these presentations have been published in the EMSA Proceedings 1985

**A Review of Electron Microscopy in Forensic, Occupational and Environmental Health Sciences** EF. Rhodes, 1988 This book represents a collection of articles based on presentations by the various authors at the Forensic Occupational and Environmental Health Sciences Symposium held as part of the 1985 joint national meetings of the Electron Microscopy Society of America and Microbeam Analysis Society As such the book is comprised of 16 different articles by 13 different authors or groups of authors Extended abstracts of the presentations were previously published by San Francisco Press under the title Proceedings Electron Microscopy of Society of America Forty Third Annual Meeting

Hays,James R. Millette,2018-02-06 Settled Asbestos Dust Sampling and Analysis compiles the most significant data on asbestos in settled dust This ready reference presents an analysis of settled dusts and surface particles of all sizes for

asbestos that is useful for qualitative and quantitative assessment and helps to determine the source of fibers. The main scope of this reference includes sample collection, sample analyses, and interpretation of settled dust data as well as the use of such data for purposes including asbestos abatement projects and in place management programs. Sections on lead and other particulates are also included. EHP, 1993. *Asbestos in the Natural Environment*. H. Schreier, 1989-08-10. Asbestos minerals have novel properties which make them highly desirable for industrial use. While the health hazards of asbestos have long been recognized and are well documented in the medical literature, ecological and environmental research involving asbestos fibers has only been undertaken in the past 25 years, and the significant deleterious effects of asbestos materials on soil and plant ecology has been much less well publicised. This book examines non occupational exposure and environmental effects of asbestos relating to animal and plant growth in the natural environment. Major nutrient imbalances and excess concentrations of trace metals have been identified as main causes for the poor plant response. Given the complexity of the asbestos analysis and the extent of the problem, this book attempts to bring together the multitude of subjects pertaining to asbestos in the natural environment with the aim of contributing to a better understanding of the chemical characteristics of asbestos rich materials and their effect on plant growth. **Crime Laboratory Digest**, 1985.
