**The Economics of Telecommunications Systems** Noel D. Uri,2004 The process of formulating and implementing telecommunications policy in the United States often seems chaotic and disorganised with overlapping responsibility and frequent conflicts among federal and state regulators Congress the Administration and the Federal judiciary There has never been a consensus on what should change and what should remain unaltered Telecommunications policy has evolved gradually over a relatively long period of time resulting in a cumulative major transformation It is still tied however to the Communications Act of 1934 Actions have been taken that have gradually moved policy from traditional public utility regulation of a monopoly to greater reliance on market forces and encouragement of competition The policies are an amalgam incorporating elements from a wide range of political and economic views There is nothing endemic in this transformation process to guarantee that the resulting policies have led to greater economic efficiency or that they are better in some subjective sense than alternatives that are available policies that have been implemented in order to evaluate their impact An objective evaluation of the impact of a policy affords an opportunity to

make adjustments to it based on the realised economic consequences This approach to policy making can be looked upon as a learning by doing exercise In this book a number of objective studies based on data from various telecommunications systems are presented These studies discuss and evaluate policies that have been implemented In a number of instances the policies have been misguided Recommendations to correct the most egregious problems are offered     **U.S. Postal Service Plan for Nine-digit Zip Code** United States.
