Romig Jr., John Armstrong, Patrick Echlin, Charles Fiori, David C. Joy, Eric Lifshin, Klaus-Rüdiger Peters, 2012-12-06 During the last four decades remarkable developments have taken place in instrumentation and techniques for characterizing the microstructure and microcomposition of materials Some of the most important of these instruments involve the use of electron beams because of the wealth of information that can be obtained from the interaction of electron beams with matter The principal instruments include the scanning electron microscope electron probe x ray microanalyzer and the analytical transmission electron microscope The training of students to use these instruments and to apply the new techniques that are possible with them is an important function which has been carried out by formal classes in universities and colleges and by special summer courses such as the ones offered for the past 19 years at Lehigh University Laboratory work which should be an integral part of such courses is often hindered by the lack of a suitable laboratory workbook While laboratory workbooks for transmission electron microscopy have been in existence for
