**Electrochemistry VI** E. Steckhan,1996-12-12 The volume Electrochemistry VI of Topics in Current Chemistry is subtitled Electroorganic Synthesis Bond Formations at the Anode and Cathode It highlights both the current value and the large potential of organic electrochemistry for the selective formation of carbon carbon and carbon heteroatom bonds and for the generation of complex organic molecules using electrochemical key steps The contents range from the synthesis of natural products to the preparation of pharmaceuticals from the generation of unsymmetrical biaryls to the construction of peptide mimetics The pros and cons of the electroorganic procedure as compared to alternative methods are discussed and mechanistic considerations are included Experts in their fields present recent results **Perspectives on Structure and**

**Mechanism in Organic Chemistry** Felix A. Carroll,2023-04-14 PERSPECTIVES ON STRUCTURE AND MECHANISM IN ORGANIC CHEMISTRY Beyond the basics physical organic chemistry textbook written for advanced undergraduates and beginning graduate students Based on the author s first hand classroom experience Perspectives on Structure and Mechanism in Organic Chemistry uses complementary conceptual models to give new perspectives on the structures and reactions of organic compounds with the overarching goal of helping students think beyond the simple models of introductory organic chemistry courses Through this approach the text better prepares readers to develop new ideas in the future In the 3rd Edition the author thoroughly updates the topics covered and reorders the contents to introduce computational chemistry earlier and to provide a more natural flow of topics proceeding from substitution to elimination to addition About 20% of the 438 problems have been either replaced or updated with answers available in the companion solutions manual To remind students of the human aspect of science the text uses the names of investigators throughout the text and references material to original or accessible secondary or tertiary literature as a guide for students interested in further reading Sample topics covered in Perspectives on Structure and Mechanism in Organic Chemistry include Fundamental concepts of organic chemistry covering atoms and molecules heats of formation and reaction bonding models and double bonds Density functional theory quantum theory of atoms in molecules Marcus Theory and molecular simulations Asymmetric induction in nucleophilic additions to carbonyl compounds and dynamic effects on reaction pathways Reactive

intermediates covering reaction coordinate diagrams radicals carbenes carbocations and carbanions Methods of studying organic reactions including applications of kinetics in studying reaction mechanisms and Arrhenius theory and transition state theory A comprehensive yet accessible reference on the subject Perspectives on Structure and Mechanism in Organic Chemistry is an excellent learning resource for students of organic chemistry medicine and biochemistry The text is ideal as a primary text for courses entitled Advanced Organic Chemistry at the upper undergraduate and graduate levels

**Russian Journal of Organic Chemistry**, 1995      Photoinduced Electron Transfer Marye Anne Fox, Michel Chanon, 1988 Electron transfer reactions are of great importance to nearly every subdiscipline of chemistry The simple transfer of a single electron has been shown repeatedly to be a common activating mode for organic inorganic and biological molecules and the very ubiquity of such reactions has guaranteed that their investigation would involve the most fundamental questions of modern chemistry The fact that photoexcitation induces enhanced redox reactivity via electron transfer also provides a convenient method for experimentally testing theoretical predictions regarding structural and energetic effects As can be seen from the very size of this work there is a great deal known about photoinduced electron transfer reactions and the editors have tried to capture the diversity and excitement inherent in this broad field The reader will find contributions from theorists and experimentalists from organic and inorganic chemists from the perspective of the synthetic and mechanistic viewpoint Some contributions are fundamental basic research while others clearly show practical applications of these principles These volumes are intended to serve a joint purpose as a reference resource and an introductory overview to the diverse research accomplished via photoexcitation of electron donor acceptor systems The information is organized in four parts The first deals with the theoretical and conceptual factors which influence electron transfer The second covers experimental methodology and medium effects The third and fourth deal with reactivity with most organic transformation being addressed in Part C and most inorganic reactions covered in Part D Each part thus provides an overview of typical reactions observed for these classes of compounds Part D also provides examples of photoinduced electron transfer in current use in important applications There is of course a significant interdependence between the four parts Subject chemical and author citation indices appear at the end of each of Parts A B and C and comprehensive indices are included in Part D      **The Chemistry of Anilines** Zvi Rappoport, 2007 Aniline is the parent molecule of a vast family of aromatic amines Since its discovery in 1826 it has become one of the hundred most important building blocks in chemistry Aniline is used as an intermediate in many different fields of applications such as isocyanates rubber processing chemicals dyes and pigments agricultural chemicals and pharmaceuticals The understanding of functional groups is key for the understanding of all organic chemistry In the tradition of the Patai Series this volume treats all aspects of this functional group It contains chapters on the theoretical and computational foundations on analytical and spectroscopical aspects with dedicated chapters on Mass Spectrometry NMR IR UV etc on reaction mechanisms on applications in syntheses pub desc
