

Main technical characteristics

- Full automated agarose gel electrophoresis system.
- Designed to automate all the steps of a traditional electrophoresis process.
- Designed to eliminate dead time between electrophoresis process intermediate steps.
- Reduced interaction between user and Machine
- Human error factor is eliminated
- Desktop machine with compact dimensions

Epigenetic Technological Applications Yujun George Zheng, 2015-05-30 Epigenetic Technological Applications is a compilation of state of the art technologies involved in epigenetic research Epigenetics is an exciting new field of biology research and many technologies are invented and developed specifically for epigenetics study With chapters covering the latest developments in crystallography computational modeling the uses of histones and more Epigenetic Technological Applications addresses the question of how these new ideas procedures and innovations can be applied to current epigenetics research and how they can keep pushing discovery forward and beyond the epigenetic realm Discusses technologies that are critical for epigenetic research and application Includes epigenetic applications for state of the art technologies Contains a global perspective on the future of epigenetics *Electrophoresis-technical Application* B. J. Haywood, 1969 Over 1600 abstracts presenting a selective survey of journals monographs and symposia describing electrophoretic techniques Unnumbered citations are arranged by topics and chronologically in 2 sections i e current literature 1965 1969 and background literature pre 1965 No indexes **U.S. Environmental Protection Agency Library System Book Catalog Holdings as of July 1973** United States. Carbon-Based Nanomaterials for Sustainable and Technological Applications Loutfy H. Madkour,2024-10-29 Carbon Based Nanomaterials for Sustainable and Technological Applications covers the fundamentals of carbon based nanomaterials CNMs and their potential for technological and industrial applications Addressing recent advancements in technology and improvement in material synthesis the book outlines how functionalized CNMs are used in nanobiotechnology for active sorbent materials and in pharmaceutical applications Chapters cover macro scale applications biosensors and drug delivery and treatment in cancer and coronavirus diseases Key features Through up to date references this book demonstrates that carbon based nanomaterials are one of the most promising nanomaterials in medical applications such as drug and gene delivery carriers as well as nonmedical environmental applications Discusses the synthesis methods of processing CQDs GQDs CPDs and g C3N4 materials based nanocomposites for biotechnological applications Chapters address various classes of carbon nanomaterials and their innovative technologies Opens up further exploration of environmental nanotechnology bionanotechnology and biomedical applications of novel carbon nanomaterials Full references can be found via the Support Material www.routledge.com/9781032635934 Written by a leading expert this volume provides the reader with thorough coverage of bionanotechnology and biomedical applications of novel carbon nanomaterials

Biofilm Applications to Revolutionize Food Technology Tanmay Sarkar,Dibyajit Lahiri,Moupriya Nag,Debasmita Bhattacharya,2025-05-12 Biofilm Applications to Transform the Food Industry is a sweeping introduction to the world of biofilms illuminating their potential to revolutionize the landscape of both food safety and culinary innovation This groundbreaking work delves into the various methods through which biofilms improve quality and sensory aspects while also enhancing overall safety and sustainability At its core this book addresses the preeminent challenge facing the food industry how to optimize taste enhance safety and extend shelf life without compromising nutritional value It offers a dynamic blueprint for chefs food scientists and industry

professionals to leverage biofilm usage exploring cutting edge techniques that revolutionize fermentation flavor enhancement and waste reduction By decoding the intricate mechanisms of biofilm interactions this work unveils solutions to persistent industry challenges providing practical insights and strategies to elevate culinary experiences while meeting consumer demands for healthier safer and more flavorful foods *Biofilm Applications to Transform the Food Industry* is an indispensable guide for culinary professionals food technologists and enthusiasts seeking to stay ahead in a rapidly evolving industry It equips readers with the tools to navigate the complexities of biofilm applications empowering them to innovate create ethically sound products and contribute to a more sustainable future This title s relevance lies in its ability to bridge the gap between cutting edge science and practical culinary applications making it an essential resource for those passionate about shaping the future of food technology

Immunoassays in Coagulation Testing Z. Parvez,2012-12-06 Rapid progress in analytical methods within the past few decades has led to the widespread applications of newer immunological and radioimmunoassay techniques to the diagnosis and treatment of hemorrhagic and thrombotic disorders Major advances were made to meet the multiple challenges of improving precision accuracy and availability of various measurements These advances have been paralleled by the discoveries of a close relationship between biological activities and the absolute concentration of proteins that were measured by immunological techniques This in turn assured the significance and usefulness of immunological methods in the management of patients Numerous variants of immunological tests now are available which allow us to both determine with precision minute quantities of antigenic proteins in serum and other biological fluids and differentiate the native protein from its genetically altered or degraded forms Methods also have been designed to immunologically evaluate some serine proteases that are in complex with proteolytic inhibitors Due to rapid progress in this field different laboratories unavoidably become experts in one or the other approach In the welter of possible choices the non expert usually is left to follow either the most recent but as yet to be confirmed method or his own anecdotal experience This manual not only brought together various methods in current use but it also set certain standardized criteria for the assessment of various deficiencies and abnormalities in hemostasis

Chromatographic Methods R. Stock,C. B. F. Rice,2013-11-11 Classification of chromatographic methods Chromatography is the name given to a particular family of separation techniques of great effectiveness The original method was described in 1903 by Tswett who used it for the separation of coloured substances and the name chromatog raphy stems from this However the limitation to coloured compounds never really obtained and most chromatographic separations are nowadays performed on mixtures of colourless substances including gases Like fractional distillation chromatography relies on the relative movement of two phases but in chromatography one is fixed and is known as the stationary phase the other is known as the mobile phase Chromatographic methods may be classified first according to the nature of the mobile phase and second according to the nature of the stationary phase The mobile phase may be a liquid or a gas and the stationary phase may be a solid or a liquid There are thus four main sub divisions of the chromatographic process as set out in Table 1 1 The system is called adsorption chromatography if the stationary phase is a solid and partition chromatography if it is a liquid

Plant Proteomics Jozef Samaj,Jay J. Thelen,2007-09-09 Proteomics is the large scale functional analysis of proteins extracted from intact organisms tissues

individual cells or cell compartments at defined timepoints during development or under specific conditions Plant Proteomics highlights the rapid progress in this field in plants with emphasis on recent work in model plant species subcellular organelles and specific aspects of the plant life cycle such as signalling reproduction and stress physiology Diverse integrated approaches including advanced proteomic techniques combined with functional genomics bioinformatics metabolomics and molecular cell biology are presented in several chapters making this book a valuable resource for a broad spectrum of readers ranging from teachers and advanced students to researchers
