

ELECTROSHOCK: THE CASE AGAINST

BY JAMES M. HANCOCK, M.D.

Electroshock therapy is a procedure in which a patient is put under general anesthesia and receives a series of electric shocks to the head.

The procedure is used to treat severe mental illness, such as schizophrenia, bipolar disorder, and major depression.

It is also used to treat some cases of epilepsy and Tourette's syndrome.

Electroshock therapy is a controversial procedure, and its use has declined significantly in recent years.

Some people believe that it is a humane and effective way to treat mental illness, while others believe that it is a cruel and inhumane practice.

There are many arguments for and against the use of electroshock therapy, and the debate continues to this day.

One of the main arguments in favor of electroshock therapy is that it is a safe and effective way to treat mental illness.

Proponents of the procedure claim that it can provide rapid relief of symptoms in some cases of severe mental illness.

They also claim that it is a humane and ethical way to treat mental illness, especially in cases where other treatments have failed.

However, there are many arguments against the use of electroshock therapy.

One of the main arguments against the procedure is that it is a cruel and inhumane practice.
