Abel's Theorem in Problems and Solutions V.B. Alekseev, 2007-05-08 Do formulas exist for the solution to algebraical equations in one variable of any degree like the formulas for quadratic equations The main aim of this book is to give new geometrical proof of Abel's theorem as proposed by Professor V I Arnold The theorem states that for general algebraical equations of a degree higher than 4 there are no formulas representing roots of these equations in terms of coefficients with only arithmetic operations and radicals A secondary and more important aim of this book is to acquaint the reader with two very important branches of modern mathematics group theory and theory of functions of a complex variable This book also has the added bonus of an extensive appendix devoted to the differential Galois theory written by Professor A G Khovanskii As this text has been written assuming no specialist prior knowledge and is composed of definitions examples problems and solutions it is suitable for self study or teaching students of mathematics from high school to graduate
