*Mathematical Models of Hysteresis* I.D. Mayergoyz, 2012-12-06 The purpose of this book is to describe in sufficient detail the mathematical models of hysteresis nonlinearities with nonlocal memories The distinct feature of these nonlinearities is that their future states depend on past histories of input variations It turns out that memories of hysteresis nonlinearities are quite selective Indeed experiments show that only some past input extrema not the entire input variations leave their marks upon future states of hysteresis nonlinearities Thus special mathematical tools are needed to describe nonlocal selective memories of hysteresis nonlinearities The origin of such tools can be traced back to the landmark paper of Preisach The book is primarily concerned with Preisach type models of hysteresis All these models have a common generic feature they are constructed as superpositions of simplest hysteresis nonlinearities rectangular loops The discussion is by and large centered around the following topics various generalizations and extensions of the classical Preisach model with special emphasis on vector generalizations finding of necessary and sufficient conditions for the representation of actual hysteresis nonlinearities by various Preisach type models solution of identification problems for these models and numerical implementation and experimental testing of Preisach type models Although the study of Preisach type models constitutes the main subject of the book some effort is also made to establish some interesting connections between these models and such topics as the critical state model for superconducting hysteresis the classical Stoner Wohlfarth model for vector magnetic hysteresis thermal activation type models for viscosity magnetostrictive hysteresis and neural networks

**Mathematical Modeling for the Scientific Method** David Pravica, Michael Spurr, 2011-08-24 Part of the International Series in Mathematics Mathematical Modeling for the Scientific Method is intended for the sophomore junior level student seeking to be well grounded in mathematical modeling for their studies in biology the physical sciences engineering and or medicine It clarifies the connection between deductive and inductive reasoning as used in Mathematics and Science and urges students to think critically about concepts and applications The authors goal is to be introductory in level while covering a broad range of techniques They unite topics in statistics linear algebra calculus and differential equations while discussing how these subjects are interrelated and utilized Mathematical Modeling for the Scientific Method leaves students with a clearer perspective of the role of mathematics within the sciences and the understanding of how to rationally work through even rigorous applications with ease

**From Models to Simulations** Franck

Varenne, 2018-09-03 This book analyses the impact computerization has had on contemporary science and explains the

origins technical nature and epistemological consequences of the current decisive interplay between technology and science an intertwining of formalism computation data acquisition data and visualization and how these factors have led to the spread of simulation models since the 1950s Using historical comparative and interpretative case studies from a range of disciplines with a particular emphasis on the case of plant studies the author shows how and why computers data treatment devices and programming languages have occasioned a gradual but irresistible and massive shift from mathematical models to computer simulations     Handbook of Research on STEM Education Carla C. Johnson, Margaret J.

Mohr-Schroeder, Tamara J. Moore, Lyn D. English, 2020-04-27 The Handbook of Research on STEM Education represents a groundbreaking and comprehensive synthesis of research and presentation of policy within the realm of science technology engineering and mathematics STEM education What distinguishes this Handbook from others is the nature of integration of the disciplines that is the founding premise for the work all chapters in this book speak directly to the integration of STEM rather than discussion of research within the individual content areas The Handbook of Research on STEM Education explores the most pressing areas of STEM within an international context Divided into six sections the authors cover topics including the nature of STEM STEM learning STEM pedagogy curriculum and assessment critical issues in STEM STEM teacher education and STEM policy and reform The Handbook utilizes the lens of equity and access by focusing on STEM literacy early childhood STEM learners with disabilities informal STEM socio scientific issues race related factors gender equity cultural relevancy and parental involvement Additionally discussion of STEM education policy in a variety of countries is included as well as a focus on engaging business industry and teachers in advocacy for STEM education The Handbook s 37 chapters provide a deep and meaningful landscape of the implementation of STEM over the past two decades As such the findings that are presented within provide the reader with clear directions for future research into effective practice and supports for integrated STEM which are grounded in the literature to date     *Mathematical Modelling from a Cognitive Perspective* Stanislaw Schukajlow, Gabriele Kaiser, Gloria Stillman, 2025-05-16 This edited volume provides readers with a snapshot of some of the current thinking on mathematical modelling education It focuses on the relationship between cognitive and metacognitive activities and student approaches to attempting to solve real world modelling problems This book presents a focused review of some current thinking and research on mathematical modelling education focusing on the relationship between cognitive and metacognitive activities and secondary student approaches to attempting to solve real world modelling problems The results of the review highlight areas where theoretical constructs are well advanced and point to areas where development and empirical confirmation are required Four empirical studies showcase both qualitative and quantitative studies providing recent findings resulting from a cognitive analysis of student modelling activity in classroom settings or under test conditions Solving of data rich modelling tasks using strategic knowledge about drawing during modelling activities connecting metacognitive individual strategies metacognitive group strategies and modelling
