Baecher, John T. Christian, 2005-08-19 Risk and reliability analysis is an area of growing importance in geotechnical engineering where many variables have to be considered Statistics reliability modeling and engineering judgement are employed together to develop risk and decision analyses for civil engineering systems The resulting engineering models are used to make probabilistic predictions which are applied to geotechnical problems Reliability Statistics in Geotechnical Engineering comprehensively covers the subject of risk and reliability in both practical and research terms Includes extensive use of case studies Presents topics not covered elsewhere spatial variability and stochastic properties of geological materials No comparable texts available Practicing engineers will find this an essential resource as will graduates in geotechnical engineering programmes **Reconstruction of Software Component Architectures and Behaviour Models Using Static and Dynamic Analysis** Klaus Krogmann, 2014-07-30 Model based performance prediction systematically deals with the evaluation of software performance to avoid for example bottlenecks estimate execution environment sizing or identify scalability limitations for new usage scenarios Such performance predictions require up to date software performance models This book describes a new integrated reverse engineering approach for the reconstruction of parameterised software performance models software component architecture and behaviour **Statistics by Algebraic and Graphic Methods** Lewis Jerome Johnson, 1908 **Solutions Manual to accompany Modern Engineering Statistics** Thomas P.
