*Handbook of Scheduling* Joseph Y-T. Leung, 2004-04-27. Researchers in management industrial engineering operations and computer science have intensely studied scheduling for more than 50 years resulting in an astounding body of knowledge in this field. *Handbook of Scheduling Algorithms Models and Performance Analysis* the first

handbook on scheduling provides full coverage of the most recent and advanced topics on the subject. It assembles researchers from all relevant disciplines in order to facilitate cross fertilization and create new scheduling insights. The book comprises six major parts each of which breaks down into smaller chapters. Part I introduces materials and notation with tutorials on complexity theory and algorithms for the minimization of makespan, total completion time, dual objectives, maximum lateness, the number of late jobs and total tardiness. Part II is devoted to classical scheduling problems. Part III explores scheduling models that originate in computer science, operations research and management science. Part IV examines scheduling problems that arise in real time systems focusing on meeting hard deadline constraints while maximizing machine utilization. Part V discusses stochastic scheduling and queueing networks highlighting jobs that are not deterministic. Part VI covers applications discussing scheduling problems in airline process and transportation industries as well as in hospitals and educational institutions.

Scheduling in Supply Chains Using Mixed Integer Programming Tadeusz Sawik, 2011-08-08. A unified systematic approach to applying mixed integer programming solutions to integrated scheduling in customer driven supply chains. Supply chain management is a rapidly developing field and the recent improvements in modeling, preprocessing, solution algorithms and mixed integer programming MIP software have made it possible to solve large scale MIP models of scheduling problems, especially integrated scheduling in supply chains. Featuring a unified and systematic presentation, *Scheduling in Supply Chains Using Mixed Integer Programming* provides state of the art MIP modeling and solutions approaches, equipping readers with the knowledge and tools to model and solve real world supply chain scheduling problems in make to order manufacturing. Drawing upon the author's own research, the book explores MIP approaches and examples which are modeled on actual supply chain scheduling problems in high tech industries in three comprehensive sections. *Short Term Scheduling in Supply Chains* presents various MIP models and provides heuristic algorithms for scheduling flexible flow shops and surface mount technology lines, balancing and scheduling of Flexible

Assembly Lines and loading and scheduling of Flexible Assembly Systems Medium Term Scheduling in Supply Chains outlines MIP models and MIP based heuristic algorithms for supplier selection and order allocation customer order acceptance and due date setting material supply scheduling and medium term scheduling and rescheduling of customer orders in a make to order discrete manufacturing environment Coordinated Scheduling in Supply Chains explores coordinated scheduling of manufacturing and supply of parts as well as the assembly of products in supply chains with a single producer and single or multiple suppliers MIP models for a single or multiple objective decision making are also provided Two main decision making approaches are discussed and compared throughout The integrated simultaneous approach in which all required decisions are made simultaneously using complex monolithic MIP models and the hierarchical sequential approach in which the required decisions are made successively using hierarchies of simpler and smaller sized MIP models Throughout the book the author provides insight on the presented modeling tools using AMPL modeling language and CPLEX solver Scheduling in Supply Chains Using Mixed Integer Programming is a comprehensive resource for practitioners and researchers working in supply chain planning scheduling and management The book is also appropriate for graduate and PhD level courses on supply chains for students majoring in management science industrial engineering operations research applied mathematics and computer science
