Electric and Hybrid Vehicles Gianfranco Pistoia, 2010-07-27 *Electric and Hybrid Vehicles Power Sources Models Sustainability Infrastructure and the Market* reviews the performance cost safety and sustainability of battery systems for hybrid electric vehicles HEVs and electric vehicles EVs including nickel metal hydride batteries and Li ion batteries Throughout this book especially in the first chapters alternative vehicles with different power trains are compared in terms of lifetime cost fuel consumption and environmental impact The emissions of greenhouse gases are particularly dealt with The improvement of

the battery or fuel cell performance and governmental incentives will play a fundamental role in determining how far and how substantial alternative vehicles will penetrate into the market. An adequate recharging infrastructure is of paramount importance for the diffusion of vehicles powered by batteries and fuel cells as it may contribute to overcome the so called range anxiety. Thus proposed battery charging techniques are summarized and hydrogen refueling stations are described. The final chapter reviews the state of the art of the current models of hybrid and electric vehicles along with the powertrain solutions adopted by the major automakers. Contributions from the world's leading industry and research experts. Executive summaries of specific case studies. Information on basic research and application approaches.

Gerdes, 2014-08-08 The Pew Group provides one of the thirteen essays here plainly stating that hybrid and electric cars make the United States more competitive so why don't we see these cars everywhere Readers will explore this issue across several topics relating to these cars including what to do with mileage taxes whether the government should subsidize the cars and why China does not embrace these cars Plug-In Electric Vehicles David B. Sandalow, 2009-09-01 Plug in electric vehicles are coming Major automakers plan to commercialize their first models soon while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets No technology has greater potential to end the United States crippling dependence on oil which leaves the nation vulnerable to price shocks supply disruptions environmental degradation and national security threats including terrorism What does the future hold for this critical technology and what should the U S government do to promote it Hybrid vehicles now number more than one million on

America's roads and they are in high demand from consumers. The next major technological step is the plug-in electric vehicle. It combines an internal combustion engine and electric motor just as hybrids do. But unlike their precursors, PEVs can be recharged from standard electric outlets, meaning the vehicles would no longer be dependent on oil. Widespread growth in the use of PEVs would dramatically reduce oil dependence, cut driving costs, and reduce pollution from vehicles. National security would be enhanced as reduced oil dependence decreases the leverage and resources of petroleum exporters.

Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials, private sector analysts, academic experts, and nongovernmental advocates. Together they explain the current landscape for PEVs, the technology, the economics, and the implications for national security and the environment. They examine how the national interest could be served by federal promotion and investment in PEVs. For example, can tax or procurement policy advance the cause of PEVs? Should the public sector contribute to greater research and development? Should the government insist on PEVs to replenish its huge fleet of official vehicles? Plug-in electric vehicles are coming. But how soon, in what numbers, and to what effect?
