Electric Vehicles Socio Economic Prospects And Technological Challenges:

Electric Vehicles Robin Cowan,Staffan Hultén,2000 Electric Vehicles provides a reasoned look at both the history of the choice of automobile technologies and the prospects for changing that choice In particular it addresses the possibility of the electrical vehicle becoming a significant part of the transportation system Its contributors evaluate this question from a variety of perspectives all of which need to be absorbed before a comprehensive understanding of the problems and prospects for the electrical vehicle can be achieved Electric Vehicles Robin Cowan,Staffan Hulten,2017-12-15 This title was first published in 2000 The electric vehicle is an established technology performing the tasks asked of it in predictable ways and at predictable costs But could expanded use of the electric vehicle have an impact in other areas of concern on the environment noise pollution oil dependency sustainability and so on To do so in a noticeable way the electric vehicle would have to become a significant part of the transportation system The goal of this work is to address that issue Whether or not the electric vehicle has technical properties that do respond effectively to these concerns is not central Rather the focus of this volume is the mechanisms whereby the electric vehicle could become a significant part of the transportation system and the prospects of this happening The chapters in this book address the question from a variety of perspectives Handbook of Innovation and Standards Richard Hawkins,Knut Blind,Robert Page,2017-08-25 Innovation and standardization might seem polar opposites but over many years various scholars have noted close connections between the two This Handbook assembles a broad range of thinking on this subject with contributions from several disciplinary perspectives by over 30 leading scholars and experienced practitioners Collectively they summarize and synthesize the existing body of knowledge theory and evidence pertaining to standards and innovation and provide insights into how this knowledge can be useful to scholars industrial strategists policy makers and standards practitioners **The Economics of Climate Change and the Change of Climate in Economics** Kevin Maréchal,2013-05-02 Climate change is without question the single most important issue the world faces over the next hundred years The most recent scientific data have led to the conclusion that the globally averaged net effect of human activities since 1750 has been one of warming and that continued greenhouse gas emissions at or above current rates would cause this process to continue to the severe detriment of our environment This unequivocal link between climate change and human activity requires an urgent world wide shift towards a low carbon economy and coordinated policies and measures to manage this transition The starting point and core idea of this book is the long held observation that the threat of climate change calls for a change of climate in economics Inherent characteristics of the climate problem including complexity irreversibility and deep uncertainty challenge core economic assumptions and mainstream economic theory appears inappropriately equipped to deal with this crucial issue Kevin Mar chal shows how themes and approaches from evolutionary and ecological economics can be united to provide a theoretical framework that is better suited to tackle the problem **Sustainable Transport for Chinese Cities** Roger L. Mackett,Anthony D.

May, Masanobu Kii, Haixiao Pan, 2013-01-16 Based on papers presented at a workshop on the green transport agenda and its implications for Chinese cities organised by the World Conference on Transport Research Society in September 2010 this volume reviews the challenges facing urban transport internationally and in China **Experimenting for Sustainable**

Transport Remco Hoogma, Rene Kemp, Johan Schot, Bernhard Truffer, 2005-06-29 Technological change is a central feature of modern societies and a powerful source for social change There is an urgent task to direct these new technologies towards sustainability but society lacks perspectives instruments and policies to accomplish this There is no blueprint for a sustainable future and it is necessary to experiment with alternative paths that seem promising Various new transport technologies promise to bring sustainability benefits But as this book shows important lessons are often overlooked because the experiments are not designed to challenge the basic assumptions about established patterns of transport choices Learning how to organise the process of innovation implementation is essential if the maximum impact is to be achieved it is here that strategic niche management offers new perspectives The book uses a series of eight recent experiments with electric vehicles carsharing schemes bicycle pools and fleet management to illustrate the means by which technological change must be closely linked to social change if successful implementation is to take place The basic divide between proponents of technological fixes and those in favour of behavioural change needs to be bridged perhaps indicating a third way *Handbook on New Paradigms in Smart Charging for E-Mobility* Abhishek Kumar, Ramesh C.
