- 1) Wear Proper Protective Equipment while performing the electrical-contact task.
- 2) Unplug the wires before repairing any electrical devices.
- 3) Check the contact points of electric circuits are enclosed.
- 4) Use one hand while working where the other hand may be placed at your side or in the pocket to avoid the chance of current passing through your chest.
- 5) Use insulated materials to free from fire hazards.

- 1) Don't try to modify any permanent connections of test equipment without the knowledge of the relevant supervisor
- 2) Don't cross-check the high voltage electric circuit, which is not isolated.
- 3) Don't try to probe or fix electrical equipment with objects like pencils where metallic substance produces the electric shock.
- 4) Don't place any liquids near the switchboard or any electrical devices.
- 5) Don't place the electrical equipment in a very cold place, and try to keep it in a condensed place.
