**Electrically Based Microstructural Characterization**, 1995      **Optoelectronic Materials: Volume 417** Eric D. Jones, Angelo Mascarenhas, Pierre Petroff, 1996-07-02 While the effects of spontaneous ordering or composition modulation on the properties of semiconductors and optoelectronic devices have been studied with great interest over the past several years an understanding of the physics and chemistry of these two related phenomena is still in its infancy This book brings together researchers from around the world to address issues concerning the physics chemistry and growth parameters for spontaneous ordering and composition modulation Developments in the use of artificial patterning to obtain new structured materials on a microscopic scale are featured Advances in characterization techniques are also presented Topics include spontaneous ordering self assembled structures and quantum dots self organized epitaxial structures composition modulation studies and optoelectronic materials

### **Metastable Phases and Microstructures: Volume 400** Rüdiger

Bormann, 1996-07-25 Materials with metastable structures and microstructures have been used with success to create unusual structural and functional properties and property combinations Highly nonequilibrium technologies for creating metastable materials have been devised which allow materials to be prepared far away from the thermodynamic equilibrium Using these methods materials can now be designed to possess specific properties tailored to fit an application rather than fitting an application to the properties of available materials However as these materials are metastable with respect to structural and compositional changes under temperature there is great concern for understanding and controlling their limitations This book features both fundamental as well as applied aspects of the subject by stressing the structure property relationships the conditions for stability of these materials and the requirements for technological applications In addition to the synthesis processing characterization properties and applications of such materials attention is also focused on the modelling of structures phenomena and processes Topics include synthesis and processing thermodynamic and kinetics phase transformations and properties and applications
