

phasors which can also be used in programmable calculators.

Part III (chs. 10, 14, and 15) can be used as a design tool in working with transmission lines and matching networks. Chapter 10 introduces a program for the calculation of characteristic impedances of different line configurations: coaxial, two-wire, single wire (with enclosure or ground), and strip line. Chapter 14 introduces a program to assist the engineer in designing a broadband matching network for antennas; it is used in conjunction with the well-known Smith Chart. (There was recently an article for using the Smith Chart on interactive computers: "Moving the Smith Chart to a Low-Cost Computer," by Mark Felton of INTCOMMEX Corp., in *Microwave Journal*, Oct. 1983.) Chapter 15 is a program for use in single-stub matching to lossless lines. Stub can be either open- or short-circuited.

Part IV of the book (chs. 11-13) is concerned with analog filter design. Noting that in digital filter design much use is made of analog filter design techniques, these programs should be of value to engineers in the signal processing area in both analog and digital domains. Chapter 11 introduces a program to calculate the attenuation characteristics and elements of a Butterworth filter. Chapter 12 is a program for calculating the attenuation characteristics and elements of a Chebyshev filter. Chapter 13 is a program for calculating the attenuation characteristics and elements of a composite constant- k and m -derived filters.

Part V (chs. 16-19 and chs. 22-23) discusses programs to be used in wave propagation and satellite communications. The program in ch. 16 is for calculating a basic transmission loss for a given smooth earth distance in the frequency range of 1 MHz-1 GHz with vertical or horizontal polarizations. In ch. 17 the program introduced will calculate the smooth earth distance for a given basic transmission loss. The program in ch. 18 is used for calculating the maximum usable frequency (MUF) and lowest usable frequency (LUF) for skywave propagation. The program in ch. 22 calculates the distance between two points on the earth's surface and the bearing; it also calculates the distance between a ground station and a satellite, and the zenith and bearing angles at the ground. Chapter 23 is a program for obtaining ground trace and altitude for communications satellites from known satellite ephemeris data.

Part VI (chs. 20-21) introduces basic programs useful for interference work, frequency allocation information, and a Morse-Code tutor. Chapter 20 is a program for calculating the intermodulation order on a given frequency produced by a set of transmit frequencies of a given intermodu-

lation order produced by a maximum of three transmitters. Chapter 24 is a program which provides a self-teaching, computer-aided course on the International Morse Code. It can be used for practice in receiving or copying Morse Code. Chapter 25 is a program which gives the authorized frequency bands and emission types for different United States amateur licenses.

In the course of this review, we encountered the following misprints or typographical errors:

p. 15: arrow head missing in definition of ϕ .

p. 22: ϕ in equation (4-2) should be ϕ (the confusion between ϕ 's appears in several places in ch. 4).

p. 22: the definition of r following equation (4-2) should be corrected to:

$$r = \sqrt{(x-x')^2 + (y-y')^2}$$

p. 25: Fig. 3 from the top should read: where i_1 , i_2 , and i_3 are defined as:

p. 57: the word "azimuth" on the line following the Sample Problem is misspelled.

p. 72: the number "3" is missing from the note to the right of α , in the second figure.

p. 84: the second line following the Sample Problem should read: ... having the colors brown, black, black, silver, brown.

p. 109: the superscript on "A" in the third line above equation (9-26) should be "c".

p. 115: "0" is missing in the diagram relating to equation (10-2); it should be placed on the vertical double-headed arrow shown on that figure.

p. 142: the value " 1μ " is missing for the second capacitor from left shown in the circuit diagram.

p. 162: the " $+$ " in the expression for $z_{in}(0)$ shown in figure 15-3 should be changed to $-$.

p. 162: the " $+$ " sign to the left of " 1 " in equation (15-15) is missing.

p. 175: the word "spherical" is misspelled on the line following equation (16-13).

Subramanian Ganesan is an assistant professor in the Department of Electrical Engineering, Western Michigan University, where this past year he taught courses in computer architecture and digital systems. Dr. Ganesan received the B.E. degree in Electrical Engineering from P.S.G. College, India, in 1968; and the M. Tech. and Ph. D. degrees in Engineering from the Indian Institute of Science in 1971 and 1981, respectively. In 1983 he was a research associate in the Computer Science Department at Concordia University, Montreal, Canada. From 1971-1983 he was with the Systems Engineering Division of the National Aeronautical Laboratory, Bangalore, India, and from 1979-1980 he was a research fellow on a DAAD Fellowship at RWTH University, Bochum, West Germany.

Dr. Ganesan is a Member of the IEEE Computer Society and of the IEEE Personal Computer Technical Committee. In the past five years, he has published extensively in the technical literature.

Sayed Hossein Mousavinezhad was born on February 23, 1947. He received the B.S. from National Taiwan University in 1972, and the M.S. (1973) and Ph. D. (1977) degrees from Michigan State University, all in Electrical Engineering. His areas of specialization include EM theory, antennas and propagation, communications and control, and biomedical applications of microwaves. From 1982 to the present he has been an associate professor of Electrical Engineering at Western Michigan University. From 1980-1982 he was an assistant professor of E.E. at Purdue University, Calumet. From 1979-1980 he was a visiting assistant professor at Southern Illinois University. From 1977-1979 he was an assistant professor at Fordows University, Mashhad, Iran, and previous to that he was with Michigan State from 1973-1977 as a research and teaching assistant.

Electro-Optical Communications Dictionary
Dennis Bodson and Dan Boser, Eds.
Hayden Book Company, 1983.

Wim van Ebben, Reviewer

This "vocabulary" contains approximately 2500 entries in the field of fiber-optic and lightwave communications systems. It attempts to give a listing of terms and definitions associated with these technologies. One wonders whether it makes sense to publish such a dictionary only two years after a dictionary on the same subject has been issued (M.H. Weik's *Fiber Optics and Lightwave Communications Standard Dictionary*, Van Nostrand, 1981). Several definitions given in the book by Bodson and Boser are exactly the same as in Weik's dictionary, including some of the errors.

My critical remarks are subdivided into four categories.

• A few definitions are not fully correct. Examples are:

"**Avalanche gain:** Current gain obtained in avalanche photodiodes. . . . Symbol: M . . . M is the mean square value of the diode's internal gain. . . ." This erroneously suggests that the current gain in APDs and their mean squares are the same or have the same value.

"**Optical dispersion attenuation:** The attenuation of a signal in an optical waveguide, caused by the fact that each frequency component of a launched pulse is attenuated such that higher frequencies are attenuated more than lower frequencies, giving rise to attenuation distortion." For all practical modulation frequencies, an optical waveguide introduces only a negligible quantity of attenuation distortion. The transfer function is mainly determined by the phase distortion.
