**Electrodynamics of Continuous Media** L D Landau, J. S. Bell, M. J. Kearsley, L. P. Pitaevskii, E.M. Lifshitz, J. B. Sykes, 2013-10-22 Covers the theory of electromagnetic fields in matter and the theory of the macroscopic electric and magnetic properties of matter There is a considerable amount of new material particularly on the theory of the magnetic properties of matter and the theory of optical phenomena with new chapters on spatial dispersion and non linear optics The chapters on ferromagnetism and antiferromagnetism and on magnetohydrodynamics have been substantially enlarged and eight other chapters have additional sections

**Electromagnetism of Continuous Media** Mauro Fabrizio, Angelo Morro, 2003-06-05 For graduate students and researchers this self contained text provides a carefully structured coherent and comprehensive treatment of the mathematical modelling in electromagnetism of continuous media The authors provide a systematic review of known subjects along with many original results Part I reviews basic notions and approaches in electromagnetism Maxwell s equations Green s functions harmonic fields dispersive effects and emphasizes the physical motivation for the modelling of non conventional materials The frequency dependent properties such as conductivity polarizability and magnetizability which enter wave diffraction and dispersion are shown and these lead to a discussion of models of materials with fading memory in the time domain Part II develops the thermodynamics of electromagnetic and thermoelectromagnetic materials with memory and provides a systematic account of thermodynamic restrictions Existence uniqueness and stability problems are investigated Also variational formulations and wave propagation solution are established Part III is devoted to more involved models which are motivated by the interest in materials and structures with non conventional properties The mathematical modelling deals with non linearity non locality and hysteresis In non linear materials attention is focussed on the generation of harmonics and in discontinuity waves Non locality is examined in a general way and hence is applied to superconductivity Hysteresis is developed for magnetism A review of known schemes is given along with new results about the modelling of hysteresis loops The wide application of technologies in new mechanical electronic and biomedical systems calls for materials and structures with non conventional properties e g materials with memory Of equal importance is the understanding of the physical behaviour of these materials and consequently developing mathematical modelling techniques for prediction Includes appendices that include some properties of Bessel functions Fourier transforms and Sobolev spaces compact operators and eigenfunctions differential operators in curvilinear coordinates and finite formulation of electromagnetism

**Physics of Continuous Media** Grigory Vekstein, 2013-03-07 Based on the author s many years of lectures and tutorials at Novosibirsk State University and the University of Manchester Physics of Continuous Media Problems and Solutions in Electromagnetism Fluid Mechanics and MHD Second Edition takes a problems based approach to teaching continuous media The book s problems and detailed solutions make it an ideal companion text for advanced physics and engineering courses Suitable for any core physics program this revised and

expanded edition includes a new chapter on magnetohydrodynamics as well as additional problems and more detailed solutions Each chapter begins with a summary of the definitions and equations that are necessary to understand and tackle the problems that follow The text also provides numerous references throughout including Landau and Lifshitz's famous course of theoretical physics and original journal publications
