Biologic Effects of Environmental Electromagnetism H. L. König, A. P. Krüger, S. Lang, W. Sönning, 2012-12-06 ARCHIVE COPY DO NOT REMOVE The public in industrialized countries shows a mounting concern about biological effects of electrical and magnetic fields As a result experimental studies on this subject are being published in increasing numbers throughout the world Prof H L König of the Technical University of Munich West Germany a leading expert and pioneer in this field has written an authoritative text in a lucid style which makes the material also accessible to lay readers The book describes the effects of natural as well as artificial electromagnetic energies covering the entire measurable frequency range from the highest frequencies x rays through microwaves radio waves and finally extremely low frequency ELF waves Citing the evidence from scientific studies in various countries König also appraises the biologic effects of microwaves and high tension power lines which have become controversial issues in recent years Other contributions to the book have been made by Prof Albert P Krueger University of California Berkeley on air ionization effects and by the meteorologist Walter Sönning on biometeorology documenting the influence of atmospheric electrical currents on health and disease Moreover the late Dr Siegfried Lang a former coworker of Dr König has contributed to this book *Electromagnetism, Man, and the Environment*

Environmental and Space Electromagnetics Hiroshi Kikuchi,2012-12-06

This book is based on the updated versions of a lively mixture of tutorials topical papers and scientific and technological contributions collected from the International URSI Symposium on Environmental and Space Electromagnetics held in Tokyo on 4 6 September 1989 It was sponsored by the International Union of Radio Science URSI as an activity of Commission E Chairman present editor preceding the URSI General Assembly in Prague Czechoslovakia in 1990 The aim was an exchange of information and views to highlight the state of the art in radio science and interdisciplinary areas Along this line the editor has attempted to cover quite new novel or unconventional subjects besides more traditional or conventional ones Although a great many subjects have apparently been covered this book has been edited so the reader can find some common concepts or views presented On this basis a group of many subjects can be treated in a unified fashion and new ideas and views can be gained as a most valuable addition to current knowledge This is one of the major features of this volume that cannot be found in any of the monographs or proceedings that cover a narrow range of limited topics Its broad scope does not stand for presentation in a superficial and shallow manner but stands for a strong focus on the search for a common nature in basic concepts or views in apparently diverse subjects and a focus on the advanced or innovative nature of each contribution
