Electronic Nightmare John Wicklein,1981 **Electronic Nightmare** John Wicklein,1981 *Electronic Nightmare* John Wicklein,1982 **The Birth of Digital Human Rights** Rebekah Dowd,2021-11-17 This book considers contested responsibilities between the public and private sectors over the use of online data detailing exactly how digital human rights evolved in specific European states and gradually became a part of the European Union framework of legal protections The author uniquely examines why and how European lawmakers linked digital data protection to fundamental human rights something heretofore not explained in other works on general data governance and data privacy In particular this work examines the utilization of national and European Union institutional arrangements as a location for activism by legal and academic consultants and by first mover states who legislated digital human rights beginning in the 1970s By tracing the way that EU Member States and non state actors utilized the structure of EU bodies to create the new norm of digital human rights readers will learn about the process of expanding the scope of human rights protections within multiple dimensions of European political space The project will be informative to scholar student and layperson as it examines a new and evolving area of technology governance the human rights of digital data use by the public and private sectors **Media in the Digital Age** John Vernon Pavlik,2008 Digital technologies have fundamentally altered the nature and function of media in our society This book critically examines digital innovations and their positive and negative implications *Philosophy and Technology II* Carl Mitcham,Alois Huning,2012-12-06 Until recently the philosophy and history of science proceeded in a separate way from the philosophy and history of technology and indeed with respect to both science and technology philosophical and historical inquiries were also following their separate ways Now we see in the past quarter century how the philosophy of science has been profoundly influenced by historical studies of the sciences and no longer concerned so single mindedly with the analysis of theory and explanation with the relation between hypotheses and experimental observation Now also we see the traditional historical studies of technology supplemented by philosophical questions and no longer so plainly focussed upon contexts of application on invention and practical engineering and on the mutually stimulating relations between technology and society Further alas the neat division of intellectual labor those clearly drawn distinctions between science and technology between the theoretical and the applied between discovery and justification between internalist and externalist approaches all have become muddled Partly this is due to internal revolutions within the philosophy and history of science the first result being recognition of their mutual relevance Partly however this state of muddle is due to external factors science at the least in the last half century has become so intimately connected with technology and technological developments have created so many new fields of scientific and philosophical inquiry that any critical reflection on scientific and technological endeavors must henceforth take their interaction into account The Information Society Jerry L.
