Electronics Pioneer Lee De Forest:

Lee de Forest and the Fatherhood of Radio James A. Hijiya, 1992 This book is not so much an analysis of de Forest's contribution to technology as it is a chronicle of his spiritual quest. Lee de Forest was an important inventor and this biography attempts to explain what moved him to become one. It tries to show how in a universe from which deity had seemingly disappeared, de Forest's devotion to invention was part of his search for a new light. The book is not a study in the history of technology but in the history of the religion of technology. In 1906 de Forest created the Audion, the three electrode vacuum tube which became the foundation of the electronics industry for half a century. He was a pioneer in radio and talking pictures and he worked on projects ranging from television to solar energy. Holder of more than three hundred patents, he was one of the most prolific inventors in American history. But he was more than that. Lee de Forest had an immense curiosity that extended beyond science and engineering to politics, literature, and religion. His active and far-ranging mind became a register for many social and intellectual events during his long life, from Populism to McCarthyism and from Darwinism to agnosticism. But while his interests were diverse, his vision was not. For him, invention was not merely a vocation but a worldview. He represented a technological progressivism that advocated reform, but reform stemming less from social engineering than from real engineering. Although he favored certain improvements in law and education, he did not think that these would be the basis of social transformation. Instead, he believed that inventions ranging from radios to war planes would reform the human condition and that the future was more in the hands of inventors than statesmen. The millennium would be a technical innovation with himself as one of its principal inventors. As a young man, de Forest came to spurn conventional notions of an immortal soul, but he never ceased to seek ways to overcome death, not merely the physical death of the body but also the spiritual death of living without purpose. The fame of his inventions, which he hoped would keep him forever alive in the memory of posterity, moreover, the good that his inventions did for humanity, his contribution to progress would give meaning to his existence. For Lee de Forest, then, invention was a substitute for religion. By helping to build the future, he sought to become an indelible part of it.

Electronics Pioneer: Lee De Forest Israel E. Levine, 1964 Grades 7-10 The 20th Century A-GI Frank N. Magill, 2013-05-13 Each volume of the Dictionary of World Biography contains 250 entries on the lives of the individuals who shaped their times and left their mark on world history. This is not a who's who. Instead, each entry provides an in-depth essay on the life and career of the individual concerned. Essays commence with a quick reference section that provides basic facts on the individual's life and achievements. The extended biography places the life and works of the individual within an historical context, and the summary at the end of each essay provides a synopsis of the individual's place in history. All entries conclude with a fully annotated bibliography.

Characters of the Information and Communication Industry Richard F. Bellaver, 2011-05-06 I have taught a graduate course on the history of the information and communications industry for 20

years The course shows students how the world has moved from primitive communication to the integrated multi media situation we are in today Concentration is on the fields of journalism telecommunications broadcasting and computing Emphasis is placed on the leaders of the areas and the political and cultural surroundings that encouraged or discouraged growth of the industry It is true that technology is a driving force of this industry but it has been the individual people characters impelled by discovery acceptance and marketability of that technology who have taken the next step to improve communication The Journalism field started with Gutenberg and early added Ben Franklin later it got a little yellow with Hearst and Pulitzer I think Henry Luce started the business of media integration but Rupert Murdoch certainly keeps it going The first practical use of electricity was found by Samuel Morse and his telegraph Bell invented the telephone or was it Meucci Theodore Vail invented the Bell System Broadcasting started with Marconis invention or was it Teslas David Sarnoff and William Paley made the medium practical and characters like Edwin R Morrow Walter Cronkite and even Oprah Winfrey gave it credibility Certainly Charles Babbage and Ada Lovelace had something to do with the start of computers but later scientists Vannevar bush and Jon von Neumann added the electronics Then UNIVAC convinced Thomas Watson Junior that IBM better start making them Jobs and Wozniac started the personal computer business but Bill Gates created the software to make them run Tim Berners Lee hooked those computers to a network and then Amazon eBay and Google found a way to make money using the result This book is the story of these people and companies *Silicon Valley* David A.

Electronic Musical Instruments Aaron Sequeira, 2023-06-29 We will address the historical development of the most relevant electronic instruments and explain each one without detailing their operation since many no longer operate today In this sense it is necessary to mention that it is not that the electronic instruments not developed in this volume do not matter but that the importance of those addressed is much greater Therefore we will focus on the analysis of how they were manufactured and where appropriate how they evolved to become modern electronic music instruments Since the design of new musical instruments has been complex the instruments mentioned throughout this volume will not be explained primarily in technical detail Still the most relevant points will be mentioned as an introduction Something that we must consider all the time when reading this volume is that all the instruments discussed have a common factor their design has always been intrinsically linked to the technologies available to their inventor depending on the time in which he lived While many of them may seem somewhat outdated or childish when compared to those that exist today we must never forget that most of these instruments ignored practices aesthetic ideals and industry standards about the time and place in which they were conceived such as the ease of manufacture the telharmonium is an incredible example the sonic predictability and the economy of scale to be able to mass manufacture them For practical reasons I have divided this volume into three sections those developed in the 18th century those produced in the 19th century and finally those manufactured in the 20th century many of which are still in operation today In this way we will realize how most of the electronic instruments that are currently used are not more than a century old after they were manufactured for the first time which is quite surprising On the other hand although a highly considerable number of patents for electronic instruments have been registered especially in the 20th century I have limited myself to mentioning the most relevant of them to have a notion of how it is that we got to the current point in this ambit With this in mind we will inevitably ask ourselves Why have only very few of the electronic instruments discussed in this volume survived to date Part of the answer to this question lies in the fact that those instruments that made it have had the capacity to adjust to the rapid and aggressive change of modernity and because they have been conceived with too much intuition in mind that is they work perfectly or rarely fail they generate familiarity in the consumer at the first contact and their way of producing them has proven to be profitable for the investors behind the project or the company that manufactures them

Whitaker, 2013-04-17 The phrase high technology is perhaps one of the more overused descriptions in our technical vocabulary It is a phrase generally reserved for discussion of integrated circuits fiber optics satellite systems and computers Few people would associate high technology with vacuum tubes The notion that vacuum tube construction is more art than science may have been true 10 or 20 years ago but today it s a different story The demand on the part of industry for tubes capable of higher operating power and frequency and the economic necessity for tubes that provide greater efficiency and reliability have moved power tube manufacturers into the high tech arena Advancements in tube design and construction have given end users new transmit ters and RF generators that allow industry to grow and prosper If you bring up the

subject of vacuum tubes to someone who has never worked on a transmitter you are likely to get a blank stare and a question Do they make those anymore Although receiving tubes have disappeared from the scene power tubes are alive and well and are performing vital functions in thousands of divergent applications Solid state and tube technologies each have their place each with its strengths and weaknesses Tube design and development although accompanied by less fanfare is advancing as are developments in solid state technology Power tubes today are designed with an eye toward high operating efficiency and high gain bandwidth properties Intelligent Problem Solving. Methodologies and Approaches Rasiah

Logananthara, Günther Palm, Moonis Ali, 2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or changing rapidly The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents clear evidence of growing interest in this area
