Chemical Transformations of Polymers R. Rado, 2018-03-05 *Chemical Transformations of Polymers* provides information pertinent to the fundamental structure and aspects of the chemical transformation of polymers This book examines several experiments for the chemical transformation of polymers which start from the assumption that the reactivity of a functional group in a macromolecule has to be similar as one in a low molecular compound Organized into 19 chapters this book begins with an overview of the various photochromic systems that have been used in polymer chemistry This text then examines the three types of stable polymers with unpaired electrons including polyradical ions neutral polyradicals and polymeric charge transfer complexes Other chapters consider the kinetic laws and traits of migration mechanisms of free valence in the process of decay of free radicals in polymers The final chapter deals with the complicated reaction of the degradation of polymers induced by the presence of metal compounds This book is a valuable resource for chemists scientists and physiochemical researchers

Single Pesticide Volume: The Triazine Herbicides Francis A. Gunther, Jane Davies Gunther, 2012-12-06 More and more biologists chemists pharmacologists toxicologists governmental agencies and food control regulatory officials around the world are finding it increasingly difficult to keep abreast of the technical literature in the pesticide field indeed many libraries do not have even a small proportion of the journals and other sources that now regularly contain research development and application information about all aspects of modern chemical pest control As a result a very large number of requests has come to RESIDUE REVIEWS to publish detailed digests of information on single pesticide chemicals so that the interested person in any part of the world could easily be brought up to date with all available important information without having to search probably several hundred literature sources many of them obscure or simply not available except in very large libraries The service and convenience rendered the readership by such a series of volumes on major individual pesticide chemicals would therefore be considerable Type and scope of coverage in this series of single pesticide volumes will of course vary with available information The coverage should be as complete as possible however to be of maximum

value to all interested individuals industries research institutions and governmental agencies concerned with the continuing production of an adequately large yet safe food supply for the world Among the topics bracketed for a single pesticide should ideally be I Introduction II History of development and use including alternate names around the world patent information III

Bioelectrochemistry I G. Milazzo, Martin F. Bach, 2013-03-09 This is the first course devoted to bioelectrochemistry held within the frame work of the International School of Biophysics Although this branch of scientific research is already about two centuries old as a truly independent one it has been in a stage of lively development since only a few decades ago and this is why a first course at the E Majorana Center was devoted to it Since bioelectrochemistry consists of many sub fields it is impossible to include even superficially all of them in a short course lasting just a week and therefore the chapter of redox reactions was chosen for this first course as being most general in character But even restricting the course to redox reactions only a few subjects could be included and therefore the choice among them was made considering the most general

guidelines that could serve as a basis for the further study of individual problems In this way we hope to give a sound basis to the study of and to stimulate further interest in this branch of both biological and physical chemistry This dual interdisciplinary approach is on the other hand unavoidable if a more rigorous and logical attack on biological problems in living bodies is to be carried ahead

Host Guest Complex Chemistry Macrocycles F. Vögtle, E. Weber, 2012-12-06 The scientific and practical interest in coronands crown ethers cryptands podands as complexing agents for cations as well as for anions and neutral low molecular species is undeniable 1 2 The chemistry of crown compounds is steadily increasing About 250 original papers dealing with crown chemistry appeared only in 1980 New molecules with crown ether properties are constantly synthesized and new applications discovered Owing to lack of space only a small number of the original publications is mentioned here Thus in the literature compilation only some but relevant works are selected for each chapter Whenever possible reference is made to reviews or review like articles alone by means of which original works can be consulted The reviews given under ref 1 are considered to be the most relevant The formulae presented in the figures should be understood as representative structures outlining a specific field 2 Classification of Oligo Multidentate Neutral Ligands and of their Complexes Today a distinction is made between the classical ring oligoethers crown ethers and monocyclic coronands oligocyclic spherical cryptands and the acyclic podands with respect to topological aspects 3 This classification and the topology are illustrated in Fig 1 each figure representing the minimum number of donor atoms and chain segments characteristic of each class of compounds Multidentate monocyclic ligands with any type of donor atoms are called coronands crown compounds while the term crown ether should be reserved for cyclic oligoethers exclusively containing oxygen as donor atom
