*The Chemistry of the Actinide and Transactinide Elements (3rd ed., Volumes 1-5)* L.R. Morss, Norman M. Edelstein, Jean Fuger, 2007-12-31 The Chemistry of the Actinide and Transactinide Elements is a contemporary and definitive compilation of chemical properties of all of the actinide elements especially of the technologically important elements uranium and plutonium as well as the transactinide elements In addition to the comprehensive treatment of the chemical properties of each element ion and compound from atomic number 89 actinium through to 109 meitnerium this multi volume work has specialized and definitive chapters on electronic theory optical and laser fluorescence spectroscopy X ray absorption spectroscopy organoactinide chemistry thermodynamics magnetic properties the metals coordination chemistry separations and trace analysis Several chapters deal with environmental science safe handling and biological interactions of the actinide elements The Editors invited teams of authors who are active practitioners and recognized experts in their specialty to write each chapter and have endeavoured to provide a balanced and insightful treatment of these fascinating elements at the frontier of the periodic table Because the field has expanded with new spectroscopic techniques and environmental focus the work encompasses five volumes each of which groups chapters on related topics All chapters represent the current state of research in the chemistry of these elements and related fields

Cu Organocopper Compounds Helmut Bauer, Jürgen Faust, Rolf Froböse, Johannes Füssel, Ulrich Krüerke, Manfred Kunz, Herman M. Somer, 2013-06-29 The present volume finalizes the coverage of organocopper compounds A complete formula and ligand index for the Gmelin organocopper series will appear shortly as Organocopper Compounds 5 The volume describes mononuclear compounds with ligands bonded by two or more carbon atoms as well as all di to octanuclear and polymeric compounds Mononuclear compounds with ligands bonded by one carbon

atom have already been described in Volumes 1 published in 1985 2 published in 1983 and 3 published in 1986 As structural elucidation in organocopper chemistry gained more attention only in the last few years the terms mononuclear dinuclear etc have been used as explained in Organocopper Compounds 1 1985 pp 3 4 all compounds are treated with their smallest formula unit unless a higher nuclearity has been proved As a consequence most of the species treated in volumes 1 to 3 are described there because of insufficient structural information although they are alleged not to be monomeric This way many of the better characterized compounds appear in the present volume which is reflected by the more than eighty X ray structure figures Generally nuclearity and structure are not only determined by the coordination properties of the ligands but also by steric requirements and may therefore widely differ for analogous compounds For abbreviations and dimensions used throughout this volume see p X Frankfurt am Main July 1987 Johannes Fussel Remarks on Abbreviations and Dimensions Most compounds and reagents in this volume are presented in tables

### **Ga Organogallium Compounds**

,2013-06-29 The present volume describes all organogallium compounds i.e. compounds containing at least one gallium carbon bond It covers the literature completely to the end of 1984 and includes many references to the literature up to the end of 1985 The organic chemistry of gallium is largely dominated by compounds of the types GaR<sub>3</sub> Chapter 1 GaR<sub>2</sub>X Chapters 2 to 12 and M GaR<sub>n</sub>X<sub>4-n</sub> M cation Chapter 13 where X<sub>n-3-n</sub> stands for a non carbon atom or any organic or organometallic group bonded to gallium through a non carbon atom The arrangement of GaR<sub>2</sub>X and M GaR<sub>n</sub>X<sub>4-n</sub> compounds by n-3-n the kind of Ga X bond is evident from the table of contents on pp XI to XIV The extensive use of pyrazolyl containing organogallium anions as polydentate donor ligands in transition metal compounds resulted in a particularly voluminous chapter on anions with Ga N bonds 13 6 The volume is concluded by a few low valence organogallium compounds Chapter 14 that I atom and an aromatic ligand in an TjE fashion exhibit bonding interaction between a gallium Due to a free coordination site at the Ga atom neutral compounds form many adducts with Lewis bases symbol D These adducts are described along with the parent substances either in a subsection of the respective chapter or in a common table at the end of the table

**Mn Manganese** Bärbel Sarbas, Wolfgang Töpper, 2013-06-29 The present volume is the first of a series describing Mn minerals There has been no attempt to provide a thorough bibliographically complete coverage of the literature Rather a selection of papers was undertaken to cover especially the various aspects of occurrence and genesis Papers that only mention an occurrence of a mineral species without additional data will not be taken into account except if they represent an unusual type of occurrence The volume starts with a brief outline of the chemical and geo cosmochemical characteristics of Mn its abundance and distribution in the cosmos and on earth and its distribution in minerals The main part describes the native metal its solid solutions with Fe or Al and silicides and carbide the sulfides and related compounds the halogenides and oxyhalogenides and the oxides of type MO The mineral descriptions comprise the following topics occurrence comprising data on paragenesis intergrowths inclusions and alteration chemistry comprising complete analysis formula diadochy and the

relationship between composition and type of geological occurrence or composition and physical properties, crystal form and structure, optical and other physical properties and chemical and thermal behavior. Frankfurt am Main: Wolfgang T. Pöppel, April 1993. Table of Contents, Page 1. Natural Occurrence Minerals. Index. Rainer Bohrer, Uwe Nohl, Paul Kämpf, Bernd Kalbskopf, Hans-Jürgen Richter-Ditten, 2013-03-09. The Gmelin Formula Index and the First and Second Supplement covered the volumes of the Eighth Edition of the Gmelin Handbook which appeared up to the end of 1987. This Third Supplement extends the Gmelin Formula Index and includes the compounds from the volumes until 1992. The publication of the Third Supplement enables to locate all compounds described in the Gmelin Handbook of Inorganic and Organometallic Chemistry since 1924. The basic structure of the Formula Index remains the same as the previous editions. Computer methods were employed during the preparation and the publication of the Third Supplement. Data acquisition, sorting and data handling were performed using a suite of computer programs developed originally by B. Roth, now at Chemplex GmbH. The SGML application for the final data processing for printing was developed in the computer department of the Gmelin Institute and at Universitätsdruckerei H. Stötz AG, Würzburg. Frankfurt am Main, March 1994. U. Nohl, G. Olbrich. Instructions for Users of the Formula Index. First Column Empirical Formula. The empirical formulae are arranged in alphabetical order of the element symbols and by increasing values of the subscripts. Any indefinite subscripts are placed at the end of the respective sorting section. Ions always appear after the neutral species, positive ions preceding negative ones.
