Elements Of Marine Ecology:

Elements of Marine Ecology R. V. Tait, 2012-12-06 The widening interest in marine biology has led to the establishment of an increasing number of school and undergraduate courses in the subject There are many books on various aspects of marine biology which students can read with advantage but few that are suitable as introductory reading at the commencement of studies This book has been compiled primarily as an aid for zoology students at the start of a special course on marine biology The text is an introduction to the author's annual course for undergraduates The aim has been a concise presentation of information and ideas over the general field of marine ecology with guidance on the selection of more advanced reading The sources of further information given at the end of each chapter have been chosen as far as possible from books and journals to which students should have reasonably easy access These lists provide a selection of additional reading which starts at an elementary level and becomes more advanced as the course proceeds Students entering the author's course are usually in their third undergraduate year and a general knowledge of the phyla is therefore assumed

Dynamics and Harmful Algal Blooms Babin, Marcel,Roesler, Collin S.,Cullen, John J.,2008-06-05 The proliferation of harmful phytoplankton in marine ecosystems can cause massive fish kills contaminate seafood with toxins impact local and regional economies and dramatically affect ecological balance Real time observations are essential for effective short term operational forecasting but observation and modelling systems are still being developed This volume provides guidance for developing real time and near real time sensing systems for observing and predicting plankton dynamics including harmful algal blooms in coastal waters The underlying theory is explained and current trends in research and monitoring are discussed Topics covered include coastal ecosystems and dynamics of harmful algal blooms theory and practical applications of in situ and remotely sensed optical detection of microalgal distributions and composition theory and practical applications of in situ biological and chemical sensors for targeted species and toxin detection integrated observing systems and platforms for detection diagnostic and predictive modelling of ecosystems and harmful algal blooms including data assimilation techniques observational needs for the public and government and future directions for research and operations

Fishing for Human Perceptions in Coastal and Island Marine Resource Use Systems, 2nd Edition Annette Breckwoldt,Wen-Cheng Wang,Hans von Storch,Beate M. W. Ratter,2019-06-07 Human perceptions decision making and pro environmental behaviour are closely connected This Research Topic focuses on bringing together perceptions and behaviour for sustainable coastal and island marine resource use systems Management and governance of large and small scale coastal marine resource use systems function in highly complex social and ecological environments which are culturally embedded economically interest led and politically biased Management processes therefore have to integrate multiple perspectives as well as perception driven standpoints on the individual as well as the decision makers levels Consequently the analysis of perceptions has developed not only as part of philosophy and psychology but also of environmental science anthropology and human geography It encompasses intuitions values attitudes thoughts mind sets place attachments and sense of place All of these influence human behavior and action and are collected or are available within the respective marine resource use system which may support the livelihood of a large part of the local population Management and governance are not only about mediating between resource use conflicts or establishing marine protected areas they deal with people and their ideas and perceptions Understanding the related decision making processes on multiple scales and levels hence means much more than economically assessing the available marine resources or existing threats to the associated system Over the past decade there has been a growing inter and transdisciplinary international community becoming interested in research which

integrates perceptions of coastal and inland residents local and regional stakeholder groups as well as resource and environmental managers and decision makers By acknowledging the importance of the individual perspective and interest led personal views it became obvious how valuable and important these sources of information are for coastal research An increase of research effort spent on the link between perceptions and behaviour in marine resource use systems is thus both timely and needed By offering a diversity of inspiring and comprehensive contributions on the link between perceptions and behaviour this Research Topic aspires to critically enlighten the discourse and applicability of such research for finding sustainable locally identified anchored and integrated marine resource use pathways

Trace Metals in the Environment and Living Organisms Philip S. Rainbow, 2018-08-23 Trace metals play key roles in life all are toxic above a threshold bioavailability yet many are essential to metabolism at lower doses It is important to appreciate the natural history of an organism in order to understand the interaction between its biology and trace metals The countryside and indeed the natural history of the British Isles are littered with the effects of metals mostly via historical mining and subsequent industrial development This fascinating story encompasses history economics geography geology chemistry biochemistry physiology ecology ecotoxicology and above all natural history Examples abound of interactions between organisms and metals in the terrestrial freshwater estuarine coastal and oceanic environments in and around the British Isles Many of these interactions have nothing to do with metal pollution All organisms are affected from bacteria plants and invertebrates to charismatic species such as seals dolphins whales and seabirds All have a tale to tell

Volume 2: Marine Ecology Juan M. Molina, Gabriela E. Blasina, 2025-04-17 Marine systems face a multitude of anthropogenic stressors such as climate change recreational and commercial fishing aquaculture practices pollution and coastal urbanization These stressors exert escalating pressure on marine ecosystems leading to noticeable changes in habitat conditions as well as alterations in the abundance and diversity of their communities Understanding the impacts of these stressors proves challenging due to their interactions with various factors such as species richness environmental fluctuations system openness stressor tolerance and the occurrence rate and intensity of each stressor Therefore a comprehensive analysis of the entire ecosystem is crucial It is essential to consider the unique characteristics of each marine environment when assessing the cumulative stress that affects them This book provides insights into the functioning of marine ecosystems and their responses to both natural and human induced drivers within the framework of sustainable marine resource utilization This book will make a valuable contribution to the scientific community serving as a resource to inform decision makers and the general public about the current state of knowledge regarding the marine environment and the human footprints on our seas
