Minerals Yearbook, 2004  
**Portraits of the Earth** Timothy G. Feeman, 2002 Every map is a tool a product of human effort and creativity that represents some aspects of our world or universe This course was powered by the belief that by exploring the mathematical ideas involved in creating and analyzing maps students would see how mathematics could help them to understand and explain their world from the Preface Portraits of the Earth exemplifies the AMS's mission to bring the power and vitality of mathematical thought to the nonexpert It is designed to teach students to think logically and to analyze the technical information that they so readily encounter every day Maps are exciting visual tools that we encounter on a daily basis from street maps to maps of the world accompanying news stories to geologic maps depicting the underground structure of the earth This book explores the mathematical ideas involved in creating and analyzing maps a topic that is rarely discussed in undergraduate courses It is the first modern book to present the famous problem of mapping the earth in a style that is highly readable and mathematically accessible to most students Feeman's writing is inviting to the novice yet also interesting to readers with more mathematical experience Through the visual context of maps and mapmaking students will see how contemporary mathematics can help them to understand and explain the world Topics explored are the shape and size of the earth basic spherical geometry and why one can't make a perfect flat map of the planet The author

discusses different attributes that maps can have and determines mathematically how to design maps that have the desired features. The distortions that arise in making world maps are quantitatively analyzed. There is an in-depth discussion on the design of numerous map projections both historical and contemporary as well as conformal and equal area maps. Feeman looks at how basic map designs can be modified to produce maps with any center and he indicates how to generalize methods to produce maps of arbitrary surfaces of revolution. Also included are end of chapter exercises and laboratory projects. Particularly interesting is a chapter that explains how to use MapleR add on software to make maps from geographic data points. This book would make an excellent text for a basic undergraduate mathematics or geography course and would be especially appealing to the teacher who is interested in exciting visual applications in the classroom. It would also serve nicely as supplementary reading for a course in calculus, linear algebra or differential geometry. Prerequisites include a solid grasp of trigonometry and basic calculus. Waterloo Maple Inc. Ontario, Canada. *World Regional Geography (with Subregions)* Lydia Mihelic Pulsipher, Alex Pulsipher, 2007-09-14. Shows how individuals are affected by and respond to economic, social and political forces at all levels of scale: global, regional and local. It offers an inclusive picture of people in a globalizing world: men, women, children, both mainstream and marginalized citizens, not as seen from a western perspective but as they see themselves. Core topics of physical, economic, cultural and political geography are examined from a contemporary perspective based on authoritative insights from recent geographic theory and examples from countries from around the world. *The Borderlands of the American and Canadian Wests* Sterling Evans, 2006-01-01. *The Borderlands of the American and Canadian Wests* is the first collection of interdisciplinary essays bringing together scholars from both sides of the forty-ninth parallel to examine life in a transboundary region. The result is a text that reveals the diversity, difficulties and fortunes of this increasingly powerful but little understood part of the North American West. Contributions by historians, geographers, anthropologists and scholars of criminal justice and environmental studies provide a comprehensive picture of the history of the borderlands region of the western United States and Canada. *The Borderlands of the American and Canadian Wests* is divided into six parts: Defining the Region, Colonizing the Frontier, Farming and Other Labor Interactions, the Borderlands as a Refuge in the Nineteenth Century, the Borderlands as a Refuge in the Twentieth Century, and Natural Resources and Conservation along the Border. Topics include the borderlands environment, its aboriginal and gender history, frontier interactions and comparisons, agricultural and labor relations, tourism, the region as a refuge for Mormons, far right groups and Vietnam War resisters, and conservation and natural resources. These areas show how the history and geography of the borderlands region has been transboundary, multidimensional and unique within North America. **A World of Difference**, 2009-08-07. Widely regarded as the standard text on development geography, this volume examines the nature and causes of global inequality and critically analyzes contemporary approaches to economic development across the third world. Students gain a deeper understanding of the interacting dynamics of culture, gender, race and class, biophysical factors

such as climate population and natural resources and economic and political processesa all of which have led to the present day disparities between the first and third worlds Numerous examples sidebars and figures illustrate how people in the global South are experiencing and contesting the forces of globalization New to This Edition Updated to reflect a decade of economic political and social changes Extensively revised more fully integrates postcolonial and feminist perspectives Broadens the prior edition s focus on Africa with examples from around the world A chapter on the promises and pitfalls of sustainable development *World Regional Geography (without Subregions)* Lydia Mihelic Pulsipher,Alex
