   Elements of the Topology of Plane Sets of Points ,1954   Elements of the topology of plane sets of points Maxwell H. Newman,1961   *Elements of the topology of plane sets of points* M. H. A. Newman,1954   *Elements of the Topology of Plane Sets of Points* Maxwell Herman Alexander Newman (mathématicien).),1961   **Elements of the Topology of Plane Sets of Points** Maxwell Herbert Alexander Newman,1951   **Graphs, Surfaces and Homology** Peter Giblin,2010-08-12 Homology theory is a powerful algebraic tool that is at the centre of current research in topology and its applications This accessible textbook will appeal to mathematics students interested in the application of algebra to geometrical problems specifically the study of surfaces sphere torus Mobius band Klein bottle In this introduction to simplicial homology the most easily digested version of homology theory the author studies interesting geometrical problems such as the structure of two dimensional surfaces and the embedding of graphs in surfaces using the minimum of algebraic machinery and including a version of Lefschetz duality Assuming very little mathematical knowledge the book provides a complete account of the algebra needed abelian groups and presentations and the development of the material is always carefully explained with proofs given in full detail Numerous examples and exercises are also included making this an ideal text for undergraduate courses or for self study   *Selected Works of Oded Schramm* Itai Benjamini,Olle Häggström,2011-08-12 This volume is dedicated to the memory of the late Oded Schramm 1961 2008 distinguished mathematician Throughout his career Schramm made profound and beautiful contributions to mathematics that will have a lasting influence In these two volumes Editors Itai Benjamini and Olle H ggstr m have collected some of his papers supplemented with three survey papers by Steffen Rohde H ggstr m and Cristophe Garban that further elucidate his work The papers within are a representative collection that shows the breadth depth enthusiasm and clarity of his work with sections on Geometry Noise Sensitivity Random Walks and Graph Limits Percolation and finally Schramm Loewner Evolution An introduction by the Editors and a comprehensive bibliography of Schramm s publications complete the volume The book will be of especial interest to researchers in probability and geometry and in the history of these subjects   Combinatorial Topology Pavel S. Aleksandrov,1998-01-01 Clearly written well organized 3 part text begins by dealing with certain classic problems without using the formal techniques of homology theory and advances to the central concept the Betti groups Numerous detailed examples   **Advances in the Complex Variable Boundary Element Method** Theodore V. Hromadka,Robert J. Whitley,2013-03-14 Since its inception by Hromadka and Guymon in 1983 the Complex Variable Boundary Element Method or CVBEM has been the subject of several theoretical adventures as well as numerous exciting applications The CVBEM is a numerical application of the Cauchy Integral theorem well known to students of complex variables to two dimensional potential problems involving the Laplace or Poisson equations Because the numerical application is analytic the approximation exactly solves the Laplace equation This attribute of the CVBEM is a distinct advantage over other numerical techniques that develop only an inexact approximation

of the Laplace equation In this book several of the advances in CVBEM technology that have evolved since 1983 are assembled according to primary topics including theoretical developments applications and CVBEM modeling error analysis The book is self contained on a chapter basis so that the reader can go to the chapter of interest rather than necessarily reading the entire prior material Most of the applications presented in this book are based on the computer programs listed in the prior CVBEM book published by Springer Verlag Hromadka and Lai 1987 and so are not republished here   Classical Topics in Complex Function Theory Reinhold Remmert,2013-03-14 An ideal text for an advanced course in the theory of complex functions this book leads readers to experience function theory personally and to participate in the work of the creative mathematician The author includes numerous glimpses of the function theory of several complex variables which illustrate how autonomous this discipline has become In addition to standard topics readers will find Eisenstein s proof of Euler s product formula for the sine function Wielandts uniqueness theorem for the gamma function Stirlings formula Isssas theorem Besses proof that all domains in C are domains of holomorphy Wedderburns lemma and the ideal theory of rings of holomorphic functions Estermanns proofs of the overconvergence theorem and Blochs theorem a holomorphic imbedding of the unit disc in C3 and Gausss expert opinion on Riemanns dissertation Remmert elegantly presents the material in short clear sections with compact proofs and historical comments interwoven throughout the text The abundance of examples exercises and historical remarks as well as the extensive bibliography combine to make an invaluable source for students and teachers alike   General Theory of Functions and Integration Angus Ellis Taylor,1985-01-01 Uniting a variety of approaches to the study of integration a well known professor presents a single volume blend of the particular and the general of the concrete and the abstract 1966 edition   **Geometry of Digital Spaces** Gabor T. Herman,2012-12-06 La narraci6n literaria es la evocaci6n de las nostalgias Literary narration is the evocation of nostalgia G G Marquez interview in Puerta del Sol VII 4 1996 A Personal Prehistory In 1972 I started cooperating with members of the Biodynamics Research Unit at the Mayo Clinic in Rochester Minnesota which was under the direction of Earl H Wood At that time their ambitious and eventually realized dream was to build the Dynamic Spatial Reconstructor DSR a device capable of collecting data regarding the attenuation of X rays through the human body fast enough for stop action imaging the full extent of the beating heart inside the thorax Such a device can be applied to study the dynamic processes of cardiopulmonary physiology in a manner similar to the application of an ordinary cr computerized tomography scanner to observing stationary anatomy The standard method of displaying the information produced by a cr scanner consists of showing two dimensional images corresponding to maps of the X ray attenuation coefficient in slices through the body Since different tissue types attenuate X rays differently such maps provide a good visualization of what is in the body in those slices bone which attenuates X rays a lot appears white air appears black tumors typically appear less dark than the surrounding healthy tissue etc However it seemed to me that this display mode would not be appropriate for the DSR   An Introduction to Group Representation

Theory ,1975-11-05 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation andmethods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory ant its particularbranches such as optimal filtering and information compression Best operator approximation Non Lagrange interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering

Classical Complex Analysis I-Hsiung Lin,2011 Classical Complex Analysis provides an introduction to one of the remarkable branches of exact science with an emphasis on the geometric aspects of analytic functions This volume begins with a geometric description of what a complex number is followed by a detailed account of algebraic analytic and geometric properties of standard complex valued functions Geometric properties of analytic functions are then developed and described In detail and various applications of residues are Included analytic continuation is also introduced Book Jacket **An Introduction to Teichmüller Spaces** Yoichi Imayoshi,Masahiko Taniguchi,2012-12-06 This book offers an easy and compact access to the theory of TeichmA1 4ller spaces starting from the most elementary aspects to the most recent developments e g the role this theory plays with regard to string theory TeichmA1 4ller spaces give parametrization of all the complex structures on a given Riemann surface This subject is related to many different areas of mathematics including complex analysis algebraic geometry differential geometry topology in two and three dimensions Kleinian and Fuchsian groups automorphic forms complex dynamics and ergodic theory Recently TeichmA1 4ller spaces have begun to play an important role in string theory Imayoshi and Taniguchi have attempted to make the book as self contained as possible They present numerous examples and heuristic arguments in order to help the reader grasp the ideas of TeichmA1 4ller theory The book will be an excellent source of information for graduate students and reserachers in complex analysis and algebraic geometry as well as for theoretical physicists working in quantum theory **Classical Complex Analysis: A Geometric Approach (Volume 2)** I-hsiung Lin,2010-09-09 Classical Complex Analysis available in two volumes provides a clear broad and solid introduction to one of the remarkable branches of exact science with an emphasis on the geometric aspects of analytic functions Volume 2 begins with analytic continuation The Riemann mapping theorem is proved and used in solving Dirichlet s problem for an open disk and hence a class of general domains via Perron s method Finally proof of the

uniformization theorem of Riemann surfaces is given The book is rich in contents figures examples and exercises It is self contained and is designed for a variety of usages and motivations concerning advanced studies It can be used both as a textbook for undergraduate and graduate students and as a reference book in general *Topology Design of Robot Mechanisms* Ting-Li Yang,Anxin Liu,Huiping Shen,LuBin Hang,Yufeng Luo,Qiong Jin,2018-01-02 This book focuses on the topology theory of mechanisms developed by the authors and provides a systematic method for the topology design of robot mechanisms The main original theoretical contributions of this book include A Three basic concepts The geometrical constraint type of axes is introduced as the third element of the topological structure of a mechanism When it is combined with the other two elements the kinematic pair and the connection of links the symbolic expression of the topological structure is independent of the motion positions except for the singularity positions and the fixed coordinate system Chapter 2 The position and orientation characteristic POC set is used to describe the POC of the relative motion between any two links The POC set derived from the unit vector set of the velocity of a link is only depend on the topological structure of a mechanism Therefore it is also independent of the motion positions and the fixed coordinate system Chapter 3 The single open chain SOC unit is the base unit of the topological structure used to develop the four basic equations of the mechanism topology Chapters 2 4 6 B The mechanism composition principle based on the SOC units This book proposes a mechanism composition principle based on the SOC units to establish a systematic theory for the unified modeling of the topology kinematics and dynamics of mechanisms based on the SOC units Chapter 7 C Four basic equations The POC equation of serial mechanisms with 10 symbolic operation rules Chapter 4 The POC equation of parallel mechanisms with 14 symbolic operation rules Chapter 5 The general DOF formula for spatial mechanisms Chapter 6 The coupling degree formula for the Assur kinematic chain Chapter 7 D One systematic method for the topology design of robot mechanisms Chapters 8 10 Based on the three basic concepts and the four basic equations addressed above this book puts forward a systematic method for the topology design of parallel mechanisms which is fundamentally different from all existing methods Its main characteristics are as follows The design process includes two stages the first is structure synthesis which derives many structure types the second involves the performance analysis classification and optimization of structure types derived from the first stage The design operation is independent of the motion positions and the fixed coordinate system Therefore the proposed method is essentially a geometrical method which ensures the full cycle DOF and the generality of geometric conditions of mechanism existence Each individual design step follows an explicit formula or the guidelines for design criteria making the operation simple feasible and reproducible In addition the topology design of the SCARA PMs is studied in detail to demonstrate the proposed method Chapter 10 *Visual Saliency: From Pixel-Level to Object-Level Analysis* Jianming Zhang,Filip Malmberg,Stan Sclaroff,2019-01-21 This book provides an introduction to recent advances in theory algorithms and application of Boolean map distance for image processing Applications include modeling what humans find salient or

prominent in an image and then using this for guiding smart image cropping selective image filtering image segmentation image matting etc In this book the authors present methods for both traditional and emerging saliency computation tasks ranging from classical low level tasks like pixel level saliency detection to object level tasks such as subitizing and salient object detection For low level tasks the authors focus on pixel level image processing approaches based on efficient distance transform For object level tasks the authors propose data driven methods using deep convolutional neural networks The book includes both empirical and theoretical studies together with implementation details of the proposed methods Below are the key features fordifferent types of readers For computer vision and image processing practitioners Efficient algorithms based on image distance transforms for two pixel level saliency tasks Promising deep learning techniques for two novel object level saliency tasks Deep neural network model pre training with synthetic data Thorough deep model analysis including useful visualization techniques and generalization tests Fully reproducible with code models and datasets available For researchers interested in the intersection between digital topological theories and computer vision problems Summary of theoretic findings and analysis of Boolean map distance Theoretic algorithmic analysis Applications in salient object detection and eye fixation prediction Students majoring in image processing machine learning and computer vision This book provides up to date supplementary reading material for course topics like connectivity based image processing deep learning for image processing Some easy to implement algorithms for course projects with data provided as links in the book Hands on programming exercises in digital topology and deep learning   Complex Analysis and Dynamical Systems VI Lawrence Zalcman,2016-05-19 This volume contains the proceedings of the Sixth International Conference on Complex Analysis and Dynamical Systems held from May 19 24 2013 in Nahariya Israel in honor of David Shoikhet s sixtieth birthday The papers range over a wide variety of topics in complex analysis quasiconformal mappings and complex dynamics Taken together the articles provide the reader with a panorama of activity in these areas drawn by a number of leading figures in the field They testify to the continued vitality of the interplay between classical and modern analysis The companion volume Contemporary Mathematics Volume 653 is devoted to partial differential equations differential geometry and radon transforms

Handbook of Spatial Logics Marco Aiello,Ian Pratt-Hartmann,Johan van Benthem,2007-09-04 The aim of this handbook is to create for the first time a systematic account of the field of spatial logic The book comprises a general introduction followed by fourteen chapters by invited authors Each chapter provides a self contained overview of its topic describing the principal results obtained to date explaining the methods used to obtain them and listing the most important open problems Jointly these contributions constitute a comprehensive survey of this rapidly expanding subject
