Elementary Science Methods A Constructivist Approach:

Elementary Science Methods David Jerner Martin, 2003 This text's unique approach guides students in learning by doing. Access to InfoTrac College Edition will enhance student understanding.

Elementary Science Methods: A Constructivist Approach David Jerner Martin, 2008-01-31 As the groundbreaking text that pioneered a constructivist approach to elementary science teaching **ELEMENTARY SCIENCE METHODS A CONSTRUCTIVIST APPROACH** Fifth Edition is based on two fundamental and complementary ideas: it is more important for children to learn how to do science than to learn about science and elementary science teachers do not need to know a great deal of science but rather should be co-inquirers with their students. This text features a wealth of exercises including open-ended inquiry activities that help teacher candidates construct their own personal conceptualizations about science content and teaching methods. More than 170 process-oriented open-ended activities organized by grade level are suggested to encourage children to develop and perform their own investigations. The Book Companion DVD available separately provides valuable tools and resources such as additional activities and video clips that students can use both in their college course and later in elementary science classrooms. All activities and much of the text content are clearly linked to National Science Education Standards (NSES) for content, professional development, assessment, and teaching, and they contain suggestions of appropriate children's literature to encourage interdisciplinary learning. Elementary Science Methods: A Constructivist Approach David Martin, 2005-07-22 In this pioneering text, Martin uses a constructivist approach to guide students in learning how to teach in a constructivist manner. Grounded in the belief that it is more important for children to learn how to do science than it is for them to learn about science, this text is predicated on the reality that teachers of elementary science do not need to know a great deal of science to be good science teachers but need to be co-inquirers with their students. To facilitate your students' learning, this text features a wealth of exercises for teacher candidates; the book includes open-ended inquiry activities that help them to construct their own personal conceptualizations about science content and teaching science in the elementary school, and it contains over 170 process-oriented open-ended activities that teachers can use to encourage children to develop and perform their own investigations. The Book Companion CD-ROM included with each new copy provides tools and resources such as additional activities and video which students can use both in their college course and later in elementary science classrooms. All activities are linked to National Science Education Standards for content, professional development, assessment, and teaching, and the activities contain suggestions of appropriate children's literature. Elementary Science Methods Andrew Martin, David Jerner Martin, 2002-07

This popular text is the first science methods book to truly practice what it preaches using a constructivist approach to guide students in learning how to teach in a constructivist manner. The text includes a wealth of open ended inquiry activities such as Constructing Your Ideas for students to complete in class. These activities help students to construct their own personal conceptualizations about teaching science in the elementary school. This text also features over 170 process oriented activities for children including Constructing Science in the Classroom and In the Schools each keyed to grade levels and each open ended so teachers can encourage children to develop and perform their own investigations. All activities are linked to National Science Education Standards for appropriate content professional development assessment and teaching and the activities contain suggestions of appropriate accompanying children's literature. Martin's text takes the approach that it is more important for children to learn how to do science than it is for them to learn about science. Children learn how to do science by mastering the scientific processes and applying them in inquiries into scientific questions. Employing the constructivist approach teachers help children form personally constructed meanings from their own experience and thought. The text is predicated on the reality that teachers of elementary science do not need to know a great deal of science to be good science teachers but need to be co inquirers with their students.

This scholarly and practical guide for science teacher educators outlines the theory, principles, and strategies needed and provides classroom examples anchored to those principles. The theoretical and empirical foundations are supported by scholarship in the field, and the practical examples are derived from activities, lessons, and units field tested in the authors' elementary science methods courses. *Designing and Teaching the Elementary Science Methods Course* is grounded in the theoretical framework of pedagogical content knowledge (PCK) which describes how teachers transform subject matter knowledge into viable instruction in their discipline. Chapters on science methods students as learners, the science methods course curriculum, instructional strategies, methods course assessment, and the field experience help readers develop their PCK for teaching prospective elementary science teachers. *Activities that Work and Tools for Teaching the Methods Course* provide useful examples for putting this knowledge into action in the elementary science methods course.
