William R. Moser,1996-10-18 Linear models normally presented in a highly theoretical and mathematical style are brought down to earth in this comprehensive textbook Linear Models examines the subject from a mean model perspective defining simple and easy to learn rules for building mean models regression models mean vectors covariance matrices and sums of squares matrices for balanced and unbalanced data sets The author includes both applied and theoretical discussions of the multivariate normal distribution quadratic forms maximum likelihood estimation less than full rank models and general mixed models The mean model is used to bring all of these topics together in a coherent presentation of linear model theory Provides a versatile format for investigating linear model theory using the mean model Uses examples that are familiar to the student Design of experiments analysis of variance regression and normal distribution theory Includes a review of relevant linear algebra concepts Contains fully worked examples which follow the theorem proof presentation *A Biologist's Guide to Mathematical Modeling in Ecology and Evolution* Sarah P. Otto,Troy Day,2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available Elementary and Intermediate Algebra Marvin L.
