Portraits of White Racism David T. Wellman, 1993-09-24 Challenging the notion that racism consists simply of prejudice in the minds of individuals this book argues instead that racism is a set of culturally acceptable beliefs that defend the advantages whites have obtained in American society The book is based on five chapters of interviews The second edition is updated with a new preface introduction and epilogue that take into account both the recent sociological theorizing about racism and new research by Wellman

Extreme Nonlinear Optics Martin Wegener, 2005 Following the birth of the laser in 1960 the field of nonlinear optics rapidly emerged Today laser intensities and pulse durations are readily available for which the concepts and approximations of traditional nonlinear optics no longer apply In this regime of extreme nonlinear optics a large variety of novel and unusual effects arise for example frequency doubling in inversion symmetric materials or high harmonic generation in gases which can lead to attosecond electromagnetic pulses or pulse trains Other examples of extreme nonlinear optics cover diverse areas such as solid state physics atomic physics relativistic free electrons in a vacuum and even the vacuum itself This book starts with an introduction to the field based primarily on extensions of two famous textbook examples namely the Lorentz oscillator model

and the Drude model Here the level of sophistication should be accessible to any undergraduate physics student Many graphical illustrations and examples are given The following chapters gradually guide the student towards the current state of the art and provide a comprehensive overview of the field Every chapter is accompanied by exercises to deepen the reader's understanding of important topics with detailed solutions at the end of the book

Physics Of Nonlinear Optics Guang S He, Song-hao Liu, 1999-12-29 Nonlinear optics has been a rapidly growing field in recent decades It is based on the study of effects and phenomena related to the interaction of intense coherent light radiation with matter Physics of Nonlinear Optics describes various major nonlinear optical effects including physical principles experimental techniques up to date research achievements and current or potential applications This book features clear conceptual descriptions concise formulations and emphasizes both theoretical and experimental aspects of nonlinear optics The readability of this book is particularly enhanced by a series of color photographs showing the spectacular appearances of various nonlinear optical effects Both authors of this book are outstanding research scientists renowned in their professional areas Their major research achievements in nonlinear optics include the pioneering studies of two wave coupled refractive index change Raman enhanced self focusing optical frequency Pockels effect stimulated Kerr scattering optical phase conjugation via backward stimulated emission and two photon absorption based optical limiting stabilization and reshaping
