Rose,1972 **Bibliography of the Edwards Aquifer, Texas, Through 1993** ,1995 *Hydrogeologic Framework of the Edwards-Trinity Aquifer System, West-central Texas* René A. Barker,Ann F. Ardis,1996 **Hydrogeologic Framework and Geochemistry of the Edwards Aquifer Saline-water Zone, South-central Texas** G. E. Groschen,Paul M. Buszka,1997 **Geology and Hydrology of the Edwards Aquifer in the San Antonio Area, Texas** Robert W. Diagenesis is a highly developed interdisciplinary field of study It is reciprocal in that it borrows from numerous scientific or technological specialties and then in turn repays them with useful results Too often however the information gained and concepts developed remain unintegrated instead of being utilized quickly by several related earth science fraternities This volume the second of a multi volume work attempts to bring together such information thereby assisting the individual and the research group in keeping up with the data explosion There is no end in sight to diagenetic research because of its wide practical and intellectual appeals Consequently periodic reviews such as presented in this volume are greatly needed

Carbonate Facies in Geologic History J.L. Wilson,2012-12-06 Since 1950 geologists have learned more about the origin and lithification of carbonate sediments than in all the previous years of the history of science This is true in all the diverse fields of carbonate geology the study of Recent environments marine zoology and botany organic geochemistry trace element and isotope geochemistry mineralogy microfacies of depositional environments and trace fossil and sedimentary structure investigation A synthesis of this new knowledge is just beginning to be formulated The purpose of this volume is to introduce the advanced student and petroleum explorationist principally to one important aspect of this study to some of the principles of carbonate geology which may serve to interpret the depositional environments of ancient strata and to better define their sequences and patterns Chapter I is a brief review of principles of carbonate sedimentation For a full discussion of the mineralogy geochemistry and diagenesis of carbonates along with a review of Holocene sediments one may refer to Bathurst s 1971 and Milliman s 1974 texts Chapter II reviews stratigraphic and paleotectonic concepts and discusses a general model for carbonate deposition Chapter III offers an outline of carbonate petrography concentrating on lithologic description for the purposes of environmental interpretation For a further review of this subject and excellent photomicrographs Horowitz and Potter 1971 and Majewske 1969 may be used **DRASTIC** ,1987 *Integration of Outcrop and Modern Analogs in Reservoir Modeling* G. Embrey,1988

Water-resources Investigations Report ,2000 *Carbonate Reservoir Characterization: A Geologic-Engineering Analysis, Part II* S.J. Mazzullo,H.H. Rieke,G.V. Chilingarian,1996-11-22 This second volume on carbonate reservoirs completes the two

volume treatise on this important topic for petroleum engineers and geologists Together the volumes form a complete modern reference to the properties and production behaviour of carbonate petroleum reservoirs The book contains valuable glossaries to geologic and petroleum engineering terms providing exact definitions for writers and speakers Lecturers will find a useful appendix devoted to questions and problems that can be used for teaching assignments as well as a guide for lecture development In addition there is a chapter devoted to core analysis of carbonate rocks which is ideal for laboratory instruction Managers and production engineers will find a review of the latest laboratory technology for carbonate formation evaluation in the chapter on core analysis The modern classification of carbonate rocks is presented with petroleum production performance and overall characterization using seismic and well test analyses Separate chapters are devoted to the important naturally fractured and chalk reservoirs Throughout the book the emphasis is on formation evaluation and performance This two volume work brings together the wide variety of approaches to the study of carbonate reservoirs and will therefore be of value to managers engineers geologists and lecturers

Trace Fossils as Indicators of Sedimentary Environments Dirk Knaust, Richard G. Bromley, 2012-12-31 Integration of ichnological information into sedimentological models and vice versa is one of the main means by which we can improve our understanding of ancient depositional environments Mainly intended for sedimentologists this book aims to make ichnological methods as part of facies interpretation more popular providing an analytical review of the ichnology of all major depositional environments and the use of ichnology in biostratigraphic and sequence stratigraphic analysis It starts with an introduction to the historical aspect of ichnology introducing common concepts and methods and then continues with parts treating the main depositional systems from continental shallow marine and deep marine siliciclastics and marine carbonates The last part is dedicated to the ichnology in hydrocarbon reservoir and aquifer characterization First overview in 25 years of the status of ichnological studies in facies reconstructions of all major depositional environments Written by a selected well experienced and specialized international authorship Provides easy access to the comprehensive and widespread literature

Zapfe,2012-12-06 The geologic term Tethys introduced by Eduard Suess 1893 into science was originally a paleogeographic one Since its original description it has been used in various ways One of them is Tethys as a paleo biogeographic concept This concept was adopted for IGCP Project 262 Tethyan Cretaceous Correlation It was proposed by G Czaszar and Heinz A Kollmann and has been approved by the IGCP Board in February 1987 The project has its aims primarily in the improvement of the stratigraphic correlation between the heterogenous facies of the Tethyan realm The requests to paleontology in this programme are of various kinds The delimitation of the Tethyan realm in space and time needs clear statements on the composition of Tethyan faunal or floral assemblages Biozones based on various fossil groups have to be established for biostratigraphic correlation Finally Tethyan bioprovinces have to be established These problems have been discussed in a special meeting of the paleontological group of the project which was held on January 25 27 1988 in Vienna Papers presented at this meeting are published in this volume *Dinosaur Tracks and Traces* David D.
