Effects On The Atmosphere Of A Major Nuclear Exchange:

The Effects on the Atmosphere of a Major Nuclear Exchange National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Committee on the Atmospheric Effects of Nuclear Explosions, 1985-02-01 Most of the earth's population would survive the immediate horrors of a nuclear holocaust but what long term climatological changes would affect their ability to secure food and shelter This sobering book considers the effects of fine dust from ground level detonations of smoke from widespread fires and of chemicals released into the atmosphere The authors use mathematical models of atmospheric processes and data from natural situations e g volcanic eruptions and arctic haze to draw their conclusions This is the most detailed and comprehensive probe of the scientific evidence published to date The Effects on the Atmosphere of a Major Nuclear Exchange Stati Uniti. National Research Council. Commission on Physical Sciences, Mathematics and Resources. Committee on the Atmospheric Effects of Nuclear Explosions, 1985 Bulletin of the Atomic Scientists, 1985-03 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world **Induced Critical Condition In The Atmosphere - Europhysics Study Conference** A Tartaglia, M Vadacchino, 1990-11-30 **Environmental Consequences of Nuclear War, Physical and Atmospheric Effects** A. Congress. House. Committee on Science and Technology. Subcommittee on Investigations and Oversight, 1983 *Hazards Due to Comets and Asteroids* Tom Gehrels, 2021-11-30 In 1993 the U S Department of Defense declassified information dealing with frequent explosions in the upper atmosphere caused by meteoric impact It is estimated that impacts have occurred of a magnitude equivalent to the atomic bomb detonated at Hiroshima Not all such space voyagers meet their end in the atmosphere however huge craters attest to the bombardment of earth over millions of years and a major impact may have resulted in the extinction of dinosaurs An impact in Siberia near the beginning of this century proves that such events are not confined to geologic time *Hazards Due to Comets and Asteroids* marks a significant step in the attempt to come to grips with the threats posed by such phenomena It brings together more than one hundred scientists from around the world who draw on observational and theoretical research to focus on the technical problems related to all aspects of dealing with these hazards searching for and identifying

hazardous comets and asteroids describing their statistics and characteristics intercepting and altering the orbits of dangerous objects and applying existent technologies rocket boosters rendezvous and soft landing techniques instrumentation to such missions The book considers defensive options for diverting or disrupting an approaching body including solar sails kinetic energy impacts nuclear explosives robotic mass drivers and various propulsion systems A cataclysmic impact posing a threat to life on Earth is a possibility that tomorrow's technology is capable of averting This book examines in depth the reality of the threat and proposes practical measures that can be initiated now should we ever need to deal with it

O. El-Kholy, 2012-12-06 Our planet is under siege Assaults on the atmosphere the greenhouse effect the depletion of the ozone layer and increasing air pollution pose a still unquantified threat to human life The dumping of hazardous wastes and land based sources of pollution present a similar threat to the oceans On land we are destroying a tropical forest the size of Austria every year and more than a hundred species of wild plants and animals are lost forever each day When the General Assembly of the United Nations established UNEP it charged us with reporting on the changing state of the world's environment tracking the underlying causes of change and working with governments to develop responses to those changes Every year since 1974 UNEP has produced a State of the Environment report focusing on one or more emerging environmental issues and always stressing the human factor the impact of environmental quality on people and society Three times since its inception 1982 1987 and 1992 UNEP has undertaken a more wide ranging study The results of the present study are the most disturbing of the three However not all the signs are negative Throughout the 1970s and into the 1980s UNEP was able to report progress in some important areas Environmental monitoring capacity was being rapidly improved in many parts of the world and Ministries of the Environment were being set up in an attempt to deal with environmental threats in a more coherent way
