Energy Efficient Electric Motor Selection Handbook Gilbert A. McCoy, 1996

Energy Efficient Electric Motor Selection Handbook A. Bhatia, 2014-12-15 The majority of electrical energy consumed in most industrial facilities is used to run electric motors By incorporating energy efficient electric motors during new construction or replacement can increase productivity while achieving substantial energy and dollar savings The efficiency gains are obtained through the use of refined design better

materials and improved construction This 4 hour online course provides an overview of the characteristics economics and benefits of standard versus high efficiency motors It covers the economic and operational factors to be considered when motor purchase decisions are being made This course is fully based on the US Department of Energy and the Bonneville Power Administration s Report Number DOE BPA 34623 3 titled Energy Efficient Electric Motor Selection Handbook This course is aimed at electrical engineers energy auditors plant managers plant engineers and others interested in energy management or preventative maintenance programs Learning ObjectiveAt the conclusion of this course the reader will understand When to buy energy efficient motors Energy efficient motor performance and price Determining and comparing motor efficiencies How much one can save on energy efficient motor Obtaining motor efficiency data Energy efficient motor selection guidelines Speed Design Voltage Enclosure Part load Efficiency and Power Factor Motor operation under abnormal conditions Motor selection considerations Additional benefits of energy efficient motors

Energy Efficiency Improvements in Electric Motors and Drives Anibal de Almeida, Paolo Bertoldi, Werner Leonhard, 2012-12-06 The reduction of energy consumption through improvements in energy efficiency has become an important goal for all countries in order to improve the efficiency of the economy to increase energy supply security and to reduce the emissions of CO and other pollutants caused by power generation 2 Electric motors use over half of all electricity consumed in developed countries Typically 60 80% of the electricity which is used in the industrial sector and about 35% of the electricity used in the commercial sector in the European Union is consumed by motors In industry a motor consumes an annual quantity of electricity which corresponds to approximately 5 times its purchase price throughout its whole life of around 12 to 20 years Motors are by far the most important type of electric load They are used in all sectors and in a wide range of applications namely the following fans compressors pumps mills winders elevators transports home appliances and office equipment etc It is their wide use that makes motor drive systems one of the main targets to achieve significant energy savings As motors are the largest Users of electrical energy even small efficiency improvements will produce very large energy savings
