Dennis, 2003-02-28 This volume represents a collection of contributions from the 6th International Conference on Eicosanoids and Other Bioactive Lipids in Cancer Inflammation and Related Diseases held in Boston from September 12 15 1999 The mission of this meeting was to bring together senior and junior investigators to both announce and examine their recent advancements in cutting edge research on the roles and actions of lipid mediators and their impact in human physiology and disease pathogenesis The meeting focused on new concepts in these areas of interest to both clinicians and researchers The program included several outstanding plenary lectures and presentations by leading experts in the fields of cancer and inflammation In addition the Boston meeting presented three Young Investigator awards one in each of the major focus areas The meeting was exciting and proved to be very memorable The program was developed with an emphasis on recent advances in molecular and of lipid mediators relevant in cellular mechanisms involved in the formation and actions inflammation and cancer Plenary lectures were presented by Prof Bengt Samuelsson Karolinska Institute Stockholm 1982 Nobel Laureate in Physiology or Medicine and Prof E 1 Corey Harvard University 1990 Nobel Laureate in Chemistry Both of these plenary lectures were held on Day 1 which set an exciting tone for this meeting Immediately following these plenary lectures three simultaneous breakout sessions were held one of inflammation a second on cancer and synthesis of novel inhibitors and a third on enzymes lipoxygenases cyclooxygenases and inhibitors

Marnett, Thomas Walden Jr., 2012-12-06 In recent decades eicosanoids have been attracting an increasing amount of attention as a result of their important physiological roles in many areas of biology and medicine The eicosanoids comprise the prostaglandins thromboxanes and leukotrienes and are products of arachidonic acid an essential polyunsaturated fatty acid stored in tissue phospholipids Disturbances of eicosanoids and their metabolic products play a regulatory role in many types of cell injuries and diseases One of the most exciting areas of eicosanoid research pinpoints their participation in the control of cell proliferation and differentiation Eicosanoids form a link between different fields of research into such areas as cancer inflammation and radiation induced injury This link provided the impetus for the development of the conference series

of which the present volume represents the proceedings of the Second International Conference held in Berlin in October 1991

**Eicosanoids and Other Bioactive Lipids in Cancer, Inflammation, and Radiation Injury 4** Kenneth V. Honn, 1999 Since their discovery over sixty years ago eicosanoids have come to represent a diverse family of bioactive lipid modulators including prostaglandins thromboxanes leukotrienes lipoxins isoprostanes hepoxilins hydroxy acids epoxy and hydroxy fatty acids This book contains conference presentations regarding the regulation of eicosanoid enzymes and in particular cyclooxygenases lipoxygenases and phospholipases In addition recent evidence over the last seven years has led to the identification of a number of receptors for these bioactive lipids The new field of isoprostanes is also represented It has become increasingly evident that eicosanoids play a critical role in signal transduction both in normal cells and in pathological processes These aspects are discussed in relation to cellular events such as apoptosis angiogenesis and cancer prevention and treatment

*Eicosanoids and Other Bioactive Lipids in Cancer, Inflammation, and Radiation Injury 2* Kenneth V. Honn, Santosh Nigam, Lawrence J. Marnett, 1998-02-28 Over one hundred contributions detail advances in the molecular and cellular biology of eicosanoid production as well as their role in signal transduction One of the most exciting developments explored within this collection of articles is the expression of the novel isoform of cyclooxygenase cox 2 which may play a large role in the development of anti inflammatory drugs

*Mechanisms in the Pathogenesis of Enteric Diseases 2* Prem S. Paul, David H. Francis, 2012-12-06 This book Mechanisms in the Pathogenesis of Enteric Diseases 2 is an out come of the Second International Rushmore Conference on Mechanisms in the Pathogenesis of Enteric Diseases held September 3D October 3 1998 in Rapid City South Dakota USA Its chapters represent many of the reviews and papers presented at the conference The meeting was organized by members of the North Central Regional Research Committee NC 62 a consortium of researchers of bovine and swine enteric diseases from land grant institutions supported by the United States Department of Agriculture The Rushmore Conferences were conceived as a forum for an interdisciplinary discussion of mechanisms of infectious enteric diseases It was intended that such a discussion would stimulate cross pollination of ideas and nurture synergistic collaborations among scientists who might otherwise not interact Enteric diseases are caused by widely divergent pathogens and parasites in broadly different settings and affect multiple organ systems Some enteric diseases affect a single species while others may affect multiple species perhaps including human beings Some enteric diseases were present in antiquity while others have recently emerged Knowledge regarding a particular disease or pathogen has

frequently proven useful in understanding another disease or pathogen because common themes in pathogenesis exist As this knowledge base grows strategies in the prevention and control of various enteric diseases often converge Cross disciplinary discussions and collaborations facilitate growth of this knowledge base as well as development of tools for disease

Tsacopoulos,2012-12-06 Thirty five years ago when Stephen Kuffler and his colleagues at Harvard initiated a new era of research on the properties and functions of neuroglial cells very few neuro scientists were impressed at the time with the hypothesis that neuroglial cells could have another though more subtle role to play in the nervous system than to provide static support to neurons Today very few neuroscientists are unaware of the fact that multiple interactions between neurons and glial cells have been described and that they constitute the basis for understanding the function and the pathology of the nervous system Glial cells outnumber neurons and make up about one half of the bulk of the nervous system They are divided into two major classes first the macroglia which include astrocytes and oligodendrocytes in the central nervous system and the Schwann cells in the peripheral nervous system and second the microglial cells These different classes of glial cells have different functions and contribute in different ways in the development function and the pathology of the nervous system
