Foundations Of Space Time Theories Relativistic Physics And Philosophy Of Science New:

Foundations of Space-Time Theories Michael Friedman, 2014-07-14 This book explores the conceptual foundations of Einstein's theory of relativity the fascinating yet tangled web of philosophical mathematical and physical ideas that is the source of the theory's enduring philosophical interest Originally published in 1983 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Foundations of Space-Time Theories John Earman, Clark N. Glymour, John J. Stachel, 1977-11-25 Foundations of Space Time Theories was first published in 1977 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions The essays in this volume are based on the papers given at a conference on the philosophical aspects of the space time theory held under the auspices of the Minnesota Center for Philosophy of Science

Philosophy Beyond Spacetime Christian Wüthrich, Baptiste Le Bihan, Nick Huggett, 2021-08-26 Quantum gravity seeks a unified theory in which quantum matter is dynamically related to generally relativistic spacetime Although a continuing work in progress research programmes in the field such as string theory loop quantum gravity and causal set theory make it clear that a successful theory of quantum gravity will raise important challenges to our conceptions of space time and matter perhaps abolishing them altogether as fundamental entities But just as important there is good reason to think that some of the problems in finding a theory of quantum gravity are themselves conceptual in need of philosophical analysis Philosophy Beyond Spacetime Implications from Quantum Gravity assembles original papers from philosophers and one physicist establishing a definitive statement of the current state of play on which future research into this area can build Aiming to expand knowledge and understanding of the philosophy of quantum gravity it emphasizes how debates in metaphysics regarding emergence composition or grounding for example shed light on the conceptual questions of quantum gravity And conversely how quantum theories of space and time call into question philosophical views grounded in classical spacetime Furthermore the philosophy of quantum gravity raises methodological questions for instance concerning the relation between physics and metaphysics The essays have been chosen to demonstrate to a wide range of philosophers the significance of the subject as well as making novel contributions to it

The Oxford Handbook of Philosophy of Science Paul Humphreys, Anjan Chakravartty, Margaret Morrison, Andrea Woody, 2016 This Handbook combines coverage of traditional areas in the philosophy of science such as causation explanation and theory structure with chapters on new areas such as philosophy of astronomy data complexity theory and emergence The articles are accessible to scientifically educated non philosophers as well as to philosophers *The*

Bloomsbury Companion to Analytic Philosophy Barry Dainton, Howard Robinson, 2015-10-22 Featuring chapters on the latest developments in fifteen core subjects in analytic philosophy The Bloomsbury Companion to Analytic Philosophy is an essential guide for all those working in the field today Introducing its history and looking ahead to new research directions this companion brings together a team of internationally renowned philosophers to explore the major concepts thinkers and areas of inquiry in the analytic tradition With an extensive glossary an annotated bibliography a timeline of major events and publications and a guide to further resources this comprehensive companion is ideal for use on courses Broken down into three parts it covers The history of analytic philosophy from Frege Moore and Russell to Wittgenstein the Vienna Circle and beyond the more recent work of four influential American philosophers Quine Davidson Putnam and Kripke Current analytic philosophy in action in subjects such as philosophy of mind and language moral and political philosophy metaphysics epistemology and the philosophy of science mathematics perception free will and personal identity Recent trends and developments such as the rise of specialisation and science self consciousness and analytic metaphysics Broaching the controversial question of what analytical philosophy is explaining how it differs from Continental Philosophy and exploring the extent to which it is in a state of crisis The Bloomsbury Companion to Analytic Philosophy presents an authoritative introduction to the origins and future of Anglo America's dominant philosophical tradition Now available in paperback this edition includes updated references and a chapter on Ethics and the problem of overdemandingness

Towards a Theory of Spacetime Theories Dennis Lehmkuhl, Gregor Schiemann, Erhard Scholz, 2017-01-05 This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world wide experts from physics philosophy and history in order to address a set of questions first posed in the 1950s How do we compare spacetime theories How do we judge objectively which is the best theory Is there even a unique answer to this question The goal of the workshop and of this book is to contribute to the development of a meta theory of spacetime theories Such a meta theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences deliver a framework for a class of theories that could be helpful as a blueprint to build other meta theories and provide a higher level viewpoint for judging which theory most accurately describes nature But rather than drawing a map in broad strokes the focus is on particularly rich regions in the space of spacetime theories This work will be of interest to physicists as well as philosophers and historians of science working with or interested in General Relativity and or Space Time and Gravitation more generally

The World According to Kant Anja Jauernig, 2021 The distinction between appearances and things in themselves lies at the heart of Kant's critical philosophy and has been the focus of fierce debate among scholars for centuries Anja Jauernig offers an interpretation of Kant's critical idealism as an ontological position as developed in the Critique of Pure Reason and associated texts

Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical

Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem's work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations

Persistence and Spacetime Yuri Balashov, 2010-04-29 How do material objects persist through time and survive change Are they three dimensional entities extended in space or are they four dimensional spacetime worms Balashov shows how the theory of relativity supports four dimensionalism and in so doing illuminates a wide range of metaphysical issues

Non-Euclidean Geometries András Prékopa, Emil Molnár, 2006-06-03 From nothing I have created a new different world wrote János Bolyai to his father Wolfgang Bolyai on November 3 1823 to let him know his discovery of non Euclidean geometry as we call it today The results of Bolyai and the co discoverer the Russian Lobachevskii changed the course of mathematics opened the way for modern physical theories of the twentieth century and had an impact on the history of human culture The papers in this volume which commemorates the 200th anniversary of the birth of János Bolyai were written by leading scientists of non Euclidean geometry its history and its applications Some of the papers present new discoveries about the life and works of János Bolyai and the history of non Euclidean geometry others deal with geometrical axiomatics polyhedra fractals hyperbolic Riemannian and discrete geometry tilings visualization and applications in physics

Background Independence in Classical and Quantum Gravity James Read, 2024-02 It is often claimed that any quantum theory of gravity needs its defining equations to be independent of a particular spacetime geometry James Read illuminates our understanding of background independence by mapping its possible definitions and assessing how various classical and quantum theories of gravity fare on these criteria

General Theory of Relativity S. P. Puri, 2013 General Theory of Relativity is the generalization of special relativity to include gravitation It emphasizes that the law of Physics must be same for all observers and thereby extended it to non inertial frames This text is intended as a textbook for the students of Physics at the undergraduate and postgraduate level It gives equal importance to the mathematical and physical aspects of general theory of relativity and hence strengthening the foregrounds

Science and Hypothesis Henri Poincaré, 2017-11-16 Science and Hypothesis is a classic text in history and philosophy of science Widely popular since its original publication in 1902 this first new translation of the work in over a century features unpublished material missing from earlier editions Addressing errors introduced by Greenstreet and Halsted in their early 20th century translations it incorporates all the changes corrections and additions Poincaré made over the years Taking care to update the writing for a modern audience Poincaré's ideas and arguments on the role of hypotheses in mathematics and in science become clearer and closer to his original meaning while David J Stump's introduction gives fresh insights into Poincaré's philosophy of science By approaching Science and Hypothesis from a contemporary perspective it presents a better understanding of Poincaré's hierarchy of the sciences with arithmetic as the foundation geometry as the science of space then mechanics and the rest of physics For philosophers of science and scientists working on problems of space time and relativity this is a much needed translation of a ground breaking work which demonstrates why Poincaré is still relevant today

Beauty and Revolution in Science James W. McAllister, 2018-09-05 Explaining why he embraced the theory of relativity the Nobel Prize winning theoretical physicist P A M Dirac stated It is the essential beauty of the theory which I feel is the real reason for believing in it How reasonable and rational can science be when its practitioners speak of revolutions in their thinking and extol certain theories for their beauty James W McAllister addresses this question with the first systematic study of the aesthetic evaluations that scientists pass on their theories Using a wealth of other examples McAllister explains how scientists' aesthetic preferences are influenced by the empirical track record of theories describes the origin and development of aesthetic styles of theorizing and reconsiders whether simplicity is an empirical or an aesthetic virtue of theories McAllister then advances an innovative model of scientific revolutions in opposition to that of Thomas S Kuhn Three detailed studies demonstrate the interconnection of empirical performance beauty and revolution One examines the impact of new construction materials on the history of architecture Another reexamines the transition from the Ptolemaic system to Kepler's theory in planetary astronomy and the third documents the rise of relativity and quantum theory in the twentieth century

Creative Understanding Roberto Torretti, 2010-12-15 A pleasure to read Gracefully written by a scholar well grounded in the relevant philosophical historical and technical background a helpfully clarifying review and analysis of some issues of importance to recent philosophy of science and a source of some illuminating insights Burke Townsend

Philosophy of Science **Toward a Directionalist Theory of Space** H. Scott Hestevold, 2020-07-02 In Toward a Directionalist Theory of Space On Going Nowhere H Scott Hestevold formulates a new relationalist theory of space by

appealing to the view that the universe is directioned in the sense that there exist directional relations a class of spatial relations that Leibniz overlooked Extending the directionalist relationalist theory of space to the problem of when it is that discrete objects compose a whole Hestevold revisits his answer to the Special Composition Question He also uses the directionalist relationalist theory to formulate reductivist theories of boundaries and holes theories that may allow one to resist the view that boundaries and holes are ontologically parasitic entities Finally he explores directionalism relationalism vis vis spacetime After noting findings of modern physics that favor substantivalist spacetime and then developing metaphysical concerns that favor instead directionalist relationalist spacetime Hestevold notes the ontological benefit of endorsing spatiotemporal directional relations even if spacetime substantivalism is the winning theory *Research and the Quality of Science Education* Kerst Boersma, Martin Goedhart, Onno de Jong, Harrie Eijkelhof, 2006-02-23 In August 2003 over 400 researchers in the field of science education from all over the world met at the 4th ESERA conference in Noordwijkerhout The Netherlands During the conference 300 papers about actual issues in the field such as the learning of scientific concepts and skills scientific literacy informal science learning science teacher education modeling in science education were presented The book contains 40 of the most outstanding papers presented during the conference These papers reflect the quality and variety of the conference and represent the state of the art in the field of research in science education *Cosmology in the Early Modern Age: A Web of Ideas* Paolo Bussotti, Brunello Lotti, 2023-01-05 This volume addresses the history and epistemology of early modern cosmology The authors reconstruct the development of cosmological ideas in the age of scientific revolution from Copernicus to Leibniz taking into account the growth of a unified celestial and terrestrial mechanics The volume investigates how in the rise of the new science cosmology displayed deep and multifaceted interrelations between scientific notions stemming from mechanics mathematics geometry astronomy and philosophical concepts These were employed to frame a general picture of the universe as well as to criticize and interpret scientific notions and observational data This interdisciplinary work reconstructs a conceptual web pervaded by various intellectual attitudes and drives It presents an historical epistemological unified itinerary which includes Copernicus Kepler Galileo Descartes Huygens Newton and Leibniz For each of the scientists and philosophers a presentation and commentary is made of their cosmological views and where relevant outlines of their most relevant physical concepts are given Furthermore the authors highlight the philosophical and epistemological implications of their scientific works This work is helpful both as a synthetic overview of early modern cosmology and an analytical exposition of the elements that were intertwined in early modern cosmology This book addresses historians philosophers and scientists and can also be used as a research source book by post graduate students in epistemology history of science and history of philosophy *The Temporal Mechanics of the Fourth Gospel* Douglas Charles Estes, 2008-03-31 Spiritual but broken theological but flawed these are the words critics use to describe the Gospel of John Compared to the Synoptics John s version of the life of Jesus seems scrambled especially in

the area of time and chronology But what if John's textual and temporal flaws have more to do with our implicit assumptions about time than a text that is truly flawed This book responds to that question by reinventing narrative temporality in light of modern physics and applying this alternative temporal lens to the Fourth Gospel From the singularity in the epic prologue to the narrative warping of event like objects this work explodes the elemental temporalities simmering below the surface of a spiritual yet superior Gospel text **Rereading Russell [electronic resource]** C.
