**Real Estate Law** Peter E. Smirniotopoulos, 2016-11-18 Unlike existing textbooks written for law students on specific subjects impacting real estate transactions, Real Estate Law: Fundamentals for The Development Process uses The Development Process as a framework for understanding how the U.S. legal system regulates, facilitates and generally impacts real estate transactions and their outcomes. This book not only addresses the nature of specific legal issues directly relating to real estate transactions but also how those issues may best be identified and addressed in advance. This book breaks down the myriad of laws influencing the selection, acquisition, development, financing, ownership and management of real estate and presents them in context. Readers of Real Estate Law will gain a practical understanding from the perspective of a real property developer or real estate executive, investor or lender of how to identify potential legal issues before they arise, when to involve a real estate attorney, how to select an attorney with the appropriate relevant experience and how to efficiently and economically engage and manage legal counsel in addressing real estate issues. Written as a graduate level text book, Real Estate Law comes with numerous useful features including a glossary of terms, chapter summaries, discussion questions, further reading and a companion website with instructor resources. It is a resource of great

value to real estate and finance professionals both with and without law degrees engaged in one aspect or another of real estate development and finance who want to become more conversant in the legal issues impacting these transactions

Graaskamp: Ten Years After**

James R. DeLisle, Elaine Worzala, 2012-12-06 As the title indicates *Essays in Honor of James A. Graaskamp Ten Years After* is a collection of essays written to honor Graaskamp's major contributions to the field of real estate education and practice over the course of three decades. Upon his death in 1988, the industry lost a major influence for advancing the real estate discipline both as an academic field and a professional field. The authors in this volume seek to extend Graaskamp's contributions and move the real estate discipline forward. The papers address the challenges posed by the market to return our attention to real estate fundamentals and to strike a proper balance between Main Street and Wall Street. The authors and editors hope that this book will influence the industry to incorporate many of Graaskamp's ideas into mainstream real estate education and practice. Over the course of his career, Graaskamp made many noteworthy contributions to real estate theory and practice ideas that if resurrected could offset some of the pressure in the industry to move away from market fundamentals. The authors try to capture the essence of Graaskamp's messages and intend that the papers serve as a point of departure for discussing the future role and nature of real estate education. Part I focuses on the major contributions to the real estate discipline made by Graaskamp and the Wisconsin Real Estate Program. Part II contains some personal recollections and photos of Graaskamp and also a summary of the groups that make up the Wisconsin Real Estate Program, a major co-sponsor of this volume. The rest of the book's three main parts are structured around major topics that reflect the multidisciplinary nature of real estate as espoused by Graaskamp. Part III treats real estate feasibility and development. Part IV concentrates on real estate valuation, and Part V discusses institutional economics.

Benchmarking as a Foundation of the Future Economy Berezhin Artiom Andreevich, 2020-09-02 This book explores how to increase the efficiency of decision making for enterprise management and increase its competitiveness based on mathematical modeling of the benchmarking process, predictive modeling of the dynamics of economic performance indicators, and the synthesis and selection of development strategies using software tools. It argues that instead of mutually devouring competition, which is common in the modern world, the model of friendly cooperative benchmarking on the principle of win-win is proposed for consideration. The advantage of this principle over the classic competitiveness one is proved through mathematical modeling and implementation of this approach in the activities of real companies, banks, and industrial enterprises.
