**Space, Time and Gravitation** Sir Arthur Stanley Eddington, 1920

**General Relativity** Robert Geroch, 2013-02-25 Robert Geroch's lecture notes on general relativity are unique in three main respects First the physics of general relativity and the mathematics which describes it are masterfully intertwined in such a way that both reinforce each other to facilitate the understanding of the most abstract and subtle issues Second the physical phenomena are first properly explained in terms of spacetime and then it is shown how they can be decomposed into familiar quantities expressed in terms of space and time which are measured by an observer Third Geroch's successful pedagogical approach to teaching theoretical physics through visualization of even the most abstract concepts is fully applied in his lectures on general relativity by the use of around a hundred figures Although the book contains lecture notes written in 1972 it is and will remain an excellent introduction to general relativity which covers its physical foundations its mathematical formalism the classical tests of its predictions its application to cosmology a number of specific and important issues such as the initial value formulation of general relativity signal propagation time orientation causality violation singularity theorems conformal transformations and asymptotic structure of spacetime and the early approaches to quantization of the gravitational field Geroch's Differential Geometry 1972 Lecture Notes can serve as a very helpful companion to this book

**Spacetime and Geometry** Sean M. Carroll, 2019-08-08 Spacetime and Geometry is an introductory textbook on general relativity specifically aimed at students Using a lucid style Carroll first covers the foundations of the theory and mathematical formalism providing an approachable introduction to what can often be an intimidating subject Three major applications of general relativity are then discussed black holes perturbation theory and gravitational waves and cosmology Students will learn the origin of how spacetime curves the Einstein equation and how matter moves through it the geodesic equation They will learn what black holes really are how gravitational waves are generated and detected and the modern view of the expansion of the universe A brief introduction to quantum field theory in curved spacetime is also included A student familiar with this book will be ready to

tackle research level problems in gravitational physics
