Fragmented Forest:

The Fragmented Forest Larry D. Harris, 2013-02-28 In this pioneering application of island biogeography theory Harris presents an alternative to current practices of timber harvesting Harris pulls together many threads of biological thinking about islands and their effect on plant and animal survival and evolution He weaves these threads into a model for managing forest lands in a manner that might serve both our short term economic and social needs as well as what some people feel is our ancient charge to be steward of all parts of creation American Forests Winner of the 1986 Wildlife Society Publication Award

Biodiversity Loss and Conservation in Fragmented Forest Landscapes Adrian C. Newton, 2007-01-01 This book is the result of an international collaborative research effort focusing on the tropical montane forests of Mexico and the temperate rain forests of southern South America The over all aim of the research was to investigate the impact of human activity on the key processes influencing biodiversity in fragmented forest landscapes and to use the research results to develop practical tools for evaluating land use decisions thereby indicating how sustainable forest management might be achieved in practice

Forest Fragmentation James Arthur Rochelle, Leslie A. Lehmann, Joe Wisniewski, 1999-01-01 The book contains 15 chapters and provides an overview and synthesis of forest fragmentation and its influences on key ecological processes and vertebrate productivity Land use practices and their effects on vertebrate populations and productivity are discussed and examples of several planning approaches to address landscape level management effects are described

Global Forest Fragmentation Chris J Kettle, Lian Pin Koh, 2014-09-12 Forest fragmentation will inevitably continue over the coming years especially in developing economies This book provides a cutting edge review of the multi disciplinary sciences related to studies of global forest fragmentation It specifically addresses cross cutting themes from both an ecological and a social sciences perspective The ultimate goal of Global Forest Fragmentation is to provide a detailed scientific base to support future forest landscape management and planning to meet global environmental and societal needs

Lessons from Amazonia Richard O. Bierregaard, Claude Gascon, Thomas E. Lovejoy, Rita Mesquita, 2001-12-11 Deforestation is occurring at an alarming rate in many parts of the world causing destruction of natural habitat and fragmentation of what remains Nowhere is this problem more pressing than in the Amazon rainforest which is rapidly vanishing in the face of enormous pressure from humans to exploit it This book presents the results of the longest running and most comprehensive study of forest fragmentation ever undertaken the Biological Dynamics of Forest Fragments Project BDFFP in central Amazonia the only experimental study of tropical forest fragmentation in which baseline data are available before isolation from continuous forest took place A joint project of Brazil's National Institute for Research in Amazonia and the U S Smithsonian Institution the BDFFP has investigated the many effects that habitat fragmentation has on plants invertebrates and vertebrates The book provides an overview of the BDFFP reports on its case studies looks at forest ecology and tree genetics and considers what issues are involved in establishing conservation and management guidelines

Forests and Insects Allan D. Watt, Nigel E. Stork, Mark D. Hunter, 1997-09-30 This book covers the full breadth of forest entomology. It combines the work of forest entomologists working on the impact and management of forest pests with those involved in diversity assessment and conservation of insects in forests. *Forests and Insects* demonstrates that both these disciplines demand an understanding of population and community biology. The book covers such topics as colonization of trees by insects, population dynamics of forest insects, insect natural enemies, the effects of climate change and pollution on forest pests, spatial variation in the abundance of insects, the mineralization of carbon by termites, the impact of herbivorous insects and the conservation of forest insect diversity including the effects of forest fragmentation and deforestation. This Royal Entomological Society Symposium volume will be of great interest to all agricultural and forest entomologists, population and community biologists, pest management specialists and anyone concerned with the conservation of forest biodiversity.

Forests, Water and People in the Humid Tropics M. Bonell, L. A. Bruijnzeel, 2009-12-17 *Forests, Water and People in the Humid Tropics* is a comprehensive review of the hydrological and physiological functioning of tropical rain forests, the environmental impacts of their disturbance and conversion to other land uses and optimum strategies for managing them. The book brings together leading specialists in such diverse fields as tropical anthropology and human geography, environmental economics, climatology and meteorology, hydrology, geomorphology, plant and aquatic ecology, forestry and conservation agronomy. The editors have supplemented the individual contributions with invaluable overviews of the main sections and provide key pointers for future research. Specialists will find authenticated detail in chapters written by experts on a whole range of people, water, land use issues; managers and practitioners will learn more about the implications of ongoing and planned forest conversion while scientists and students will appreciate a unique review of the literature.

Primates in Fragments Laura K. Marsh, 2013-06-29 This volume was created initially from a symposium of the same name presented at the International Primatological Society's XVIII Congress in Adelaide, South Australia, 6-12 January 2000. Many of the authors who have contributed to this text could not attend the symposium, so this has become another vehicle for the rapidly growing discipline of Fragmentation Science among primatologists. Fragmentation has quickly become a field separate from general ecology, which underscores the severity of the situation since we as a planet are rapidly losing habitat of all types to human disturbance. Getting ecologists, particularly primatologists, to admit that they study in fragments is not easy. In the field of primatology, one studies many things but rarely do those things: genetics, behavior, population dynamics get called out as studies in fragmentation. For some reason, fragmentation, primatologists fear that our work is somehow not as good as those

who study in continuous habitat We worry that perhaps our subjects are not demonstrating as robust behaviors as they should given fragmented or disturbed habitat conditions I had a colleague openly state that she did not work in fragmented forests that she merely studied behavior when it was clear that her study sites everyone of them was isolated habitat Our desire to be just another link in the data chain for wild primates is so strong that it makes us deny what kinds of habitats we are working in However **Idaho Panhandle National Forest (N.F.), Savant Sage** ,1994 **Fort McClellan (Main Post) Disposal and Reuse** ,1998 Tropical Ecology John C. Kricher,2011-02-28 A comprehensive introduction to tropical ecology This full color illustrated textbook offers the first comprehensive introduction to all major aspects of tropical ecology It explains why the world s tropical rain forests are so universally rich in species what factors may contribute to high species richness how nutrient cycles affect rain forest ecology and how ecologists investigate the complex interrelationships among flora and fauna It covers tropical montane ecology riverine ecosystems savanna dry forest and more Tropical Ecology begins with a historical overview followed by a sweeping discussion of biogeography and evolution and then introduces students to the unique and complex structure of tropical rain forests Other topics include the processes that influence everything from species richness to rates of photosynthesis how global climate change may affect rain forest characteristics and function how fragmentation of ecosystems affects species richness and ecological processes human ecology in the tropics biodiversity and conservation of tropical ecosystems and species Drawing on real world examples taken from actual research Tropical Ecology is the best textbook on the subject for advanced undergraduates and graduate students Offers the first comprehensive introduction to tropical ecology Describes all the major kinds of tropical terrestrial ecosystems Explains species diversity evolutionary processes and coevolutionary interactions Features numerous color illustrations and examples from actual research Covers global warming deforestation reforestation fragmentation and conservation The essential textbook for advanced undergraduates and graduate students Suitable for courses with a field component Leading universities that have adopted this book include Biola University Bucknell University California State University Fullerton Colorado State University Fort Collins Francis Marion University Michigan State University Middlebury College Northern Kentucky University Ohio Wesleyan University St Mary s College of Maryland Syracuse University Tulane University University of California Santa Cruz University of Central Florida University of Cincinnati University of Florida University of Missouri University of New Mexico University of North Carolina at Chapel Hill University of the West Indies *Conservation Biology* Peggy L. Fiedler,2012-12-06 John Harper Nature conservation has changed from an idealistic philosophy to a serious technology Ecology the science that underpins the technology of conservation is still too immature to provide all the wisdom that it must It is arguable that the desire to conserve nature will in itself force the discipline of ecology to identify fundamental problems in its scientific goals and methods In return ecologists may be able to offer some insights that make conservation more practicable Harper 1987 The idea that nature species or communities is worth preserving rests on

several fundamental arguments particularly the argument of nostalgia and the argument of human benefit and need Nostalgia of course is a powerful emotion With some notable exceptions there is usually a feeling of dismay at a change in the status quo whether it be the loss of a place in the country for walking or rambling the loss of a painting or architectural monument or that one will never again have the chance to see a particular species of bird or plant *Biodiversity Loss and Conservation in Fragmented Forest Landscapes* Adrian C. Newton, 2007-01-01 Based on a field research on the changing montane and temperate rainforests of Mexico and South America By concentrating on these largely overlooked environments this work allows for comparative analysis across areas and helps identify how human disturbance has impacted the biodiversity of all forest types *Comparative Breeding Biology of the Ovenbird in Large Vs. Fragmented Forests* Sharon Ann Wander, 1985 **Lessons from Amazonia** R. O. Bierregaard Jr., 2001 Forest ecology and genetics Fragmentation effects on plant communities Fragmentation effects on invertebrate and vertebrate communities Management guidelines

Owl Monkeys Eduardo Fernandez-Duque, 2023-09-13 This book integrates three decades of owl monkey research conducted since 1994 when the first and only book focused on the genus *Aotus* was published Owl monkeys were one of the least understood primates then knowledge from wild populations was only beginning to emerge and there had been some substantial research in colonies of captive individuals The situation is very different today Research on captive owl monkeys has continued to develop with valuable contributions to the health and medical sciences And there is now enough information on the behavior ecology conservation and biogeography of the genus that merits a synthesis The book synthesizes new field data on the biogeography behavioral ecology circadian biology population biology and demography spanning their entire continental range from Panama to Argentina It includes theoretical perspectives drawn from evolutionary biology biological anthropology anatomy morphology and physiology genetics endocrinology and conservation biology to examine a specific set of adaptations that have allowed owl monkeys to exploit the nocturnal niche while functioning in a pair living sexually monogamous system with remarkable patterns of paternal care The author with 30 years of research experience with both captive and wild primates has directed the longest project on any owl monkey species and has conducted extensive original research on their biology adaptive radiation and behavioral ecology His expertise and published record on both wild populations and laboratory colonies makes this book one of a kind it presents information from both captive and wild primates and explores questions through the integration of both approaches The volume offers some additional features that make it novel in its approach 1 brings together a combination of senior researchers who during four decades have established captive owl monkeys as a system of study with a new generation of younger scientists who have for the last 10 20 years been spearheading their study in the wild 2 presents the work of a remarkably diverse range of authors representing all countries where owl monkeys are present as well as researchers from the U S and Europe and 3 offers synthesis chapters in doing so it will surely become a reference book for those specifically drawn to owl monkeys as well as for those interested
