Halogenated Organic Containing Wastes Treatment Technologies:

Technical Resource Document United States. Environmental Protection Agency. Office of Research and Development, 1987 *Technical Resource Document Treatment Technologies for Halogenated Organic Containing Wastes* N. F. Surprenant, T. Nunno, Mike Kravett, Marc Breton, Alliance Technologies Corp, 1987 This halogenated organics technical resource document TRD is one of a series of five TRDs that are being prepared by the Hazardous Waste Engineering Research Laboratory It provides information that can be used by environmental regulatory agencies and others as a source of technical information describing alternatives to the land disposal of nonsolvent halogenated wastes These alternatives include waste minimization recover treatment and disposal of waste streams Although emphasis is placed on the presentation of performance data for proven technologies information dealing with the applicability of other emerging technologies is presented as well Abstract page iv Innovative Treatment Technologies, 1991 Halogenated-Organic Containing Waste N. F. Surprenant, 1988 Halogenated Organic Containing Waste Technical Resource Document, 1988 Halogenated Solvent Cleaners: Emission Control Technologies and Cost Analysis, 1990-12-31 This book discusses the halogenated cleaning systems currently in use and how to control emissions through specific technologies and the costs involved in using these techniques *Technology Transfer*, 1988 **Technical Resource Document**, 1987 **Treatment Technologies for Solvent Containing Wastes** M. Breton, 1988-12-31 Unit Operations in Environmental Engineering Robert Noyes, 1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows 1 Biological Technology 2 Chemical Technology 3 Containment and Barrier Technology 4 Immobilization Technology 5 Membrane Technology 6 Physical Technology 7 Radiation and Electrical Technology 8 Thermal Destruction Technology Traditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance However such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies The HUD Lead-based Paint Abatement Demonstration (FHA), 1991 **Physical/chemical treatment of hazardous waste sites**, 1990 Monthly Catalog of United States Government Publications United States. Superintendent of Documents, 1990 *Approaches for the Remediation of Federal Facility Sites Contaminated with Explosive Or Radioactive Wastes* Edwin Barth, 1994-12 Provides an overview of technical issues related to remediating soil applications at the laboratory bench pilot or field scale advantages limitations of the technology Over 100 charts tables

drawings *Resources and References* Donna S. Kocurek, Bayle Woodside, 1995-12-31 This guide book provides references and resources for the complex field of hazardous waste and hazardous materials management The book is divided into general topics such as air quality industrial wastewater pollution prevention and risk assessment under hazardous waste management and chemical hazards emergency planning and hazard communication under hazardous materials management Each individual section includes a list of annotated bibliographies of the most recent books by major publishers as well as established standard references Following the annotated titles are additional references of books and documents by publishers technical associations and governmental agencies primarily the U S Environmental Protection Agency In general only references from 1986 onward are included since the technology and regulations affecting hazardous waste and materials are constantly evolving Additional resources included in the book are video tapes for training and instruction information services and databases libraries agency contacts technical journals and a list of publishers and ordering information This book will be a useful reference to professionals in the environmental field who need an extensive but concise source of technical information and contacts The book will be a valuable addition to individual libraries and will fill a current reference void in university libraries and technical libraries in industry and government At present there are very few technical bibliographies in the field and none has covered topics related to hazardous materials and hazardous waste as extensively as this book **Federal Register** ,1991 **Advances in Soil Science** ,2012-12-06 Soil degradation is clearly one of the most pressing problems facing man kind A continuation of soil degradation will eventually lead to a loss in crop productivity even though fertilizers and other inputs often result in increased yields in the short term Soil degradation also leads to environmental pollution A decrease in soil quality invariably leads to a decrease in water quality and often in air quality While there is a clear consensus that soil degradation is a major problem the literature on this subject leaves numerous baffling questions If statistics on land degradation are correct there is a definite cause for concern and present a mammoth challenge for agricultural scientists There are those that say the scientific community has over dramatized this issue and created a credibility problem Consequently Volume 11 of *Advances in Soil Science* was organized by Dr Rattan Lal who is recognized as a leading authority on the subject The objective of Volume 11 was to assess the types and processes of soil degradation and establish some of the major cause effect relationships Volume II documented the seriousness of soil degradation in many parts of the world Therefore it seemed immediately important to devote a volume to the principles and technologies for restoring degraded soils to a productive status While the land resources are limited world population is rapidly increasing particularly in developing countries Dr *The ...
