The Action Plan for Australian Birds 2020 Stephen T. Garnett, G Barry Baker, 2021-12 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted The latest in a series of action plans for Australian birds that have been produced every decade since 1992 it is also the largest The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans This volume also includes accounts of over 60 taxa that are no longer considered threatened mainly thanks to sustained conservation action over many decades This extensive book covers key themes that have emerged in the last decade including the increasing impact of climate change as a threatening process most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains However the effects are also indirect as happened in the catastrophic fires of 2019-20 Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population But there are good news stories too especially on islands where there have been spectacular successes with predator control Such uplifting results demonstrate that when action plans are followed by action on the ground threatened species can indeed be recovered and threats alleviated **Climate Change Adaptation Plan for Australian Birds** Stephen Garnett, Donald Franklin, 2014-05-30 This is the first climate change adaptation plan produced for a national faunal group anywhere in the world It outlines the nature of threats related to climate change for the Australian bird taxa most likely to be affected by climate change and provides recommendations on what might be done to assist them and approximate costs of doing so It also features an analysis of how climate change will affect all Australian birds explains why some species are likely to be more exposed or sensitive to it than others and explores the theory and practice of conservation management under the realities of a changing climate Species profiles include maps showing current core habitat and modelled climatic suitability based on historical records as well as maps showing projected climatic suitability in 2085 in relation to current core habitat Climate Change Adaptation Plan for Australian Birds is an important reference for policy makers conservation scientists land managers climate change adaptation biologists as well as bird watchers and advocacy groups Queensland's Threatened Animals Lee K Curtis, 2012-02-01 Queensland is home to 70% of Australia's native mammals 226 species over 70% of native birds 630 species just over half of the nation's native reptiles 485 and native frogs 127 and more than 11 000 native plant species Hundreds of these have a threatened status in Queensland In order for Queensland to maintain and recover a healthy biodiversity we must address the serious problems faced by our natural environment habitat loss inappropriate land management change in fire regimes pollution of natural resources proliferation

of invasive species and climate change This book features up to date distribution data photos and maps for most of Queensland s threatened animals It also includes a comprehensive list of resources with key state national and international organisations involved in the recovery and management of threatened species Queensland s Threatened Animals will provide vital information to scientists educators business entities government agencies students community groups environmental NGOs regional NRMs and potential volunteers

Animal Behavior Victor S. Lamoureux,2016-04-19 This title includes a number of Open Access chapters This comprehensive volume looks at a range of topics covering the habits of a variety of animals including how macaques teach their offspring how rats transmit avoidance behavior how supplementary feeding of tree frogs affects their breeding behavior and more Studies in animal behavior can

Bird Minds Gisela Kaplan,2015-08-03 In her comprehensive and carefully crafted book Gisela Kaplan demonstrates how intelligent and emotional Australian birds can be She describes complex behaviours such as grieving deception problem solving and the use of tools Many Australian birds cooperate and defend each other and exceptional ones go fishing by throwing breadcrumbs in the water extract poisonous parts from prey and use tools to crack open eggshells and mussels The author brings together evidence of many such cognitive abilities suggesting plausible reasons for their appearance in Australian birds *Bird Minds* is the first attempt to shine a critical and scientific light on the cognitive behaviour of Australian land birds In this fascinating volume the author also presents recent changes in our understanding of the avian brain and links these to life histories and longevity Following on from Gisela s well received books on the Australian Magpie and the Tawny Frogmouth as well as two earlier titles on birds *Bird Minds* contends that the unique and often difficult conditions of Australia s environment have been crucial for the evolution of unusual complexities in avian cognition and behaviour

Cooperative Breeding in Vertebrates Walter D. Koenig,Janis L. Dickinson,2016-01-07 Cooperative breeders are species in which individuals beyond a pair assist in the production of young in a single brood or litter Although relatively rare cooperative breeding is widespread taxonomically and continues to pose challenges to our understanding of the evolution of cooperation and altruistic behavior Bringing together long term studies of cooperatively breeding birds mammals and fish this volume provides a synthesis of current studies in the field The chapters are organised by individual studies of particular species or in the case of mole rats two closely related cooperatively breeding species Each focuses not only on describing behavior and ecology but also on testing evolutionary hypotheses for the form and function of the diverse and extraordinary cooperative breeding lifestyles that have been discovered This unique and comprehensive text will be of interest to graduate students and researchers of behavioral ecology and the evolution of cooperation

Carnivores of Australia Alistair Glen,Christopher Dickman,2014-11-05 The Australian continent provides a unique perspective on the evolution and ecology of carnivorous animals In earlier ages Australia provided the arena for a spectacular radiation of marsupial and reptilian predators The causes of their extinctions are still the subject of debate Since European settlement Australia has seen the extinction of one large marsupial predator the

thylacine another the Tasmanian devil is in danger of imminent extinction and still others have suffered dramatic declines By contrast two recently introduced predators the fox and cat have been spectacularly successful with devastating impacts on the Australian fauna Carnivores of Australia Past Present and Future explores Australia s unique predator communities from pre historic historic and current perspectives It covers mammalian reptilian and avian carnivores both native and introduced to Australia It also examines the debate surrounding how best to manage predators to protect livestock and native biodiversity Readers will benefit from the most up to date synthesis by leading researchers and managers in the field of carnivore biology By emphasising Australian carnivores as exemplars of flesh eaters in other parts of the world this book will be an important reference for researchers wildlife managers and students worldwide **Temperate Woodland**

Conservation and Management David Lindenmayer, Andrew F. Bennett, Richard J. Hobbs, 2010 This book summarizes the main discoveries management insights and policy initiatives in the science management and policy arenas associated with temperate woodlands in Australia More than 60 of Australia s leading researchers policy makers and natural resource managers have contributed to the volume It features new perspectives on the integration of woodland management and agricultural production including the latest thinking about whole of paddock restoration and carbon farming as well as financial and social incentive schemes to promote woodland conservation and management Temperate Woodland Conservation and Management will be a key supporting aid for farmers natural resource managers policy makers and people involved in NGO landscape restoration and management **KEY FEATURES** High quality chapters from the nation s leading researchers managers and policy makers in temperate woodlands New perspectives on the integration of woodland management and agricultural production Easy to follow format that distills key new insights and lessons for future conservation and management initiatives **Imitation and Social Learning in Robots, Humans and Animals**

Chrystopher L. Nehaniv, Kerstin Dautenhahn, 2009-04-09 Mechanisms of imitation and social matching play a fundamental role in development communication interaction learning and culture Their investigation in different agents animals humans and robots has significantly influenced our understanding of the nature and origins of social intelligence Whilst such issues have traditionally been studied in areas such as psychology biology and ethnology it has become increasingly recognised that a constructive approach towards imitation and social learning via the synthesis of artificial agents can provide important insights into mechanisms and create artefacts that can be instructed and taught by imitation demonstration and social interaction rather than by explicit programming This book studies increasingly sophisticated models and mechanisms of social matching behaviour and marks an important step towards the development of an interdisciplinary research field consolidating and providing a valuable reference for the increasing number of researchers in the field of imitation and social learning in robots humans and animals **Biotremology: Studying Vibrational Behavior** Peggy S. M. Hill, Reinhard Lakes-Harlan, Valerio Mazzoni, Peter M. Narins, Meta Virant-Doberlet, Andreas Wessel, 2019-11-29 This volume is a self

contained companion piece to *Studying Vibrational Communication* published in 2014 within the same series. The field has expanded considerably since then and has even acquired a name of its own: biotremology. In this context, the book reports on new concepts in this fascinating discipline and features chapters on state-of-the-art methods for studying behavior tied to substrate-borne vibrations as well as an entire section on applied biotremology. Also included are a historical contribution by pioneers in the field and several chapters reviewing the advances that have been made regarding specific animal taxa. Other new topics covered are vibrational communication in vertebrates, multimodal communication, and biotremology in the classroom as well as in art and music. Given its scope, the book will appeal to all those interested in communication and vibrational behavior but also to those seeking to learn about an ancient mode of communication.

Ecology and Evolution of Cooperative Breeding in Birds Walter D. Koenig, Janis L. Dickinson, 2004-04-22. Cooperative breeders are species in which more than a pair of individuals assist in the production of young. Cooperative breeding is found in only a few hundred bird species world-wide, and understanding this often strikingly altruistic behaviour has remained an important challenge in behavioural ecology for over 30 years. This book highlights the theoretical, empirical, and technical advances that have taken place in the field of cooperative breeding research since the publication of the seminal work *Cooperative Breeding in Birds: Long-term Studies of Behavior and Ecology* 1990, HB ISBN 0521 372984, PB ISBN 0521 378907. Organized conceptually, special attention is given to ways in which cooperative breeders have proved fertile subjects for testing modern advances to classic evolutionary problems, including those of sexual selection, sex ratio manipulation, life history, evolution, partitioning of reproduction, and incest avoidance. It will be of interest to both students and researchers interested in behaviour and ecology.

The Action Plan for Australian Birds 2010 Stephen Garnett, Judit Szabó, Guy Dutson, Guy C. L. Dutson, 2011. The Action Plan for Australian Birds 2010 is the third in a series of action plans that have been produced at the start of each decade. The book analyzes the International Union for Conservation of Nature (IUCN) status of all the species and subspecies of Australia's birds, including those of the offshore territories. For each bird, the size and trend in their population and distribution has been analyzed using the latest iteration of IUCN Red List Criteria to determine their risk of extinction. The book also provides an account of all those species and subspecies that are or are likely to be extinct. Each categorization is justified on the basis of the latest research, including much unpublished material that has been made available during workshops conducted with leading ornithologists and conservation biologists around the country as well as phone interviews and correspondence. The result is the most authoritative account yet of the status of Australia's birds. In this completely revised edition, each account covers not only the 2010 status but provides a retrospective assessment of the status in 1990 and 2000 based on current knowledge, taxonomic revisions, and changes to the IUCN criteria, and then reasons why the status of some taxa has changed over the last two decades. Maps have been created specifically for the Action Plan based on vetted data drawn from the records of Birds Australia, its members, and its partners in many government departments. The book

contains some surprises some alarming some encouraging The status of some birds has improved over the last two decades as a result of dedicated conservation management Some may not have changed status but at least they are holding their own Many however are continuing to decline and a distressing number are new to the list There is also an increasing number of birds for which captive insurance populations need not only to be considered as a future option but actively pursued before it is too late But this is not a book of lost causes It is a call for action to keep the extraordinary biodiversity we have inherited and pass the legacy to our children Every one of Australia s threatened taxa can be saved This book describes the populations of species at greatest risk and outlines ways we can turn them around

KEY FEATURES Readily accessible status information with reasons for listing Synopsis of principal features that influence listing List of actions needed for conservation Includes specially commissioned distribution maps

Invasion Biology and Ecological Theory Herbert H. T. Prins, Iain J. Gordon, 2014-01-23 A critical appraisal of ecosystem theory using case studies of plant and animal invasions in Australasia

Biogeography and Evolution in New Zealand Michael Heads, 2016-10-04 Biogeography and Evolution in New Zealand provides the first in depth treatment of the biogeography of New Zealand a region that has been a place of long enduring interest to ecologists evolutionary scientists geographers geologists and scientists in related disciplines It serves as a key addition to the contemporary discussion on regionalization how is New Zealand different from the rest of the world With what other areas does it share its geology history and biota Do new molecular phylogenies show that New Zealand may be seen as a biological parallel universe within global evolution

Wildlife of the Otways and Shipwreck Coast Grant Palmer, 2019-04-01 The Otways and Shipwreck Coast is known for its natural beauty and attracts millions of visitors each year particularly along the Great Ocean Road The value of the region s rich biodiversity is recognised at the national and global level and its wildlife is markedly different to other regions including eastern Victoria which supports similar vegetation types Wildlife of the Otways and Shipwreck Coast is a photographic field guide to the vertebrate wildlife of Victoria s south west It covers all the mammals birds reptiles and frogs that occur in the region including on land and in coastal waters Each of the 288 species profiles includes a description and information on identification range conservation status habitat use and ecology and is complemented by an exquisite colour photograph and a detailed distribution map The book also includes chapters on habitat types conservation and management and on 14 key places in the region to view wildlife This book will allow those interested in wildlife including residents and visitors to identify vertebrate animals found in the region Readers will also become more familiar with the distinct role the Otways has in conserving Australia s biodiversity

Advances in Reintroduction Biology of Australian and New Zealand Fauna Doug Armstrong, Matthew Hayward, Dorian Moro, Philip Seddon, 2015-05-15 The publication of Reintroduction Biology of Australian and New Zealand Fauna nearly 20 years ago introduced the new science of reintroduction biology Since then there have been vast changes in our understanding of the process of reintroductions and other conservation driven translocations and corresponding changes in regulatory frameworks

governing translocations *Advances in Reintroduction Biology of Australian and New Zealand Fauna* is a timely review of our understanding of translocation from an Australasian perspective ensuring translocation becomes an increasingly effective conservation management strategy in the future Written by experts including reintroduction practitioners researchers and policy makers the book includes extensive practical advice and example case studies identifies emerging themes and suggests future directions Topics include key questions in reintroduction biology population establishment prey naivety disease management dispersal the roles of trials and experiments modelling projections assisted colonisation population interchange genetic diversity disease management metapopulation dynamics reintroduced species as ecological engineers the contributions of sanctuary networks and zoos and extensive insights from reintroduction programs This book is aimed at conservation practitioners and researchers as well as conservation management agencies and NGOs Although it is based on Australasian examples it will be of interest globally due to synergies with reintroduction programs throughout the world

Our Australian Feathered Friends ,2007 *Extinct Birds* Julian P. Hume,2017-08-24 A comprehensive review of the hundreds of bird species that have become extinct over the last 1 000 years of habitat degradation over hunting and rat introduction *Extinct Birds* has become the standard text on this subject covering both familiar icons of extinction as well as more obscure birds some known from just one specimen or from travellers tales This second edition is expanded to include dozens of new species as more are constantly added to the list either through extinction or through new subfossil discoveries The book is the result of decades of research into literature and museum drawers as well as caves and subfossil deposits which often reveal birds long gone that disappeared without ever being recorded by scientists while they lived From Great Auks Carolina Parakeets and Dodos to the amazing yet almost completely vanished bird radiations of Hawaii and New Zealand via rafts of extinction in the Pacific and elsewhere this book is both a sumptuous reference and astounding testament to humanity s devastating impact on wildlife
