Environmental Health Perspectives ,1993 Methods for Developing Spacecraft Water Exposure Guidelines National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on Spacecraft Water Exposure Guidelines, 2000-10-18 The National Aeronautics and Space Administration NASA maintains an active interest in the environmental conditions associated with living and working in spacecraft and identifying hazards that might adversely affect the health and well being of crew members Despite major engineering advances in controlling the spacecraft environment some water and air contamination appears to be inevitable

Several hundred chemical species are likely to be found in the closed environment of the spacecraft and as the frequency complexity and duration of human space flight increase identifying and understanding significant health hazards will become more complicated and more critical for the success of the missions NASA asked the National Research Council NRC Committee on Toxicology to develop guidelines similar to those developed by the NRC in 1992 for airborne substances for examining the likelihood of adverse effects from water contaminants on the health and performance of spacecraft crews In this report the Subcommittee on Spacecraft Water Exposure Guidelines SWEGs examines what is known about water contaminants in spacecraft the adequacy of current risk assessment methods and the toxicologic issues of greatest concern

McClellan, Frank Welsch, 1999-10-05 Toxicology is a comprehensive text for researchers and graduate students in toxicology and public health It addresses every aspect of the field starting with the fundamentals and incorporating such areas as organ toxicology applications and environmental toxicology In addition to covering the traditional subject matter of toxicology special emphasis has been placed on recent areas of interest such as risk assessment apoptosis and methodical developments Key Features Comprehensive text covering all aspects of the field of toxicology Analyzes the importance of toxicokinetics and metabolism as well as cellular targets for the mechanisms of toxic effects Identifies the various classes of chemical compounds responsible for the toxic effects Describes the approaches and methods used by various disciplines which investigate toxic effects and their prevention Adapted from a very successful German text this edition is completely revised and expanded The text is well illustrated with diagrams charts and tables **Spacecraft Maximum Allowable**

Concentrations for Selected Airborne Contaminants National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on Spacecraft Maximum Allowable Concentrations, 2000-04-02 The National Aeronautics and Space Administration NASA is aware of the potential toxicological hazards to crew members that might be associated with prolonged spacecraft missions Despite major engineering advances in controlling the atmosphere within spacecraft some contamination of the air appears inevitable NASA has measured numerous airborne contaminants during space missions As the missions increase in duration and complexity ensuring the health and well being of astronauts traveling and working in this unique environment becomes increasingly difficult As part of its efforts to promote safe conditions aboard spacecraft NASA requested the National Research Council NRC to develop guidelines for establishing spacecraft maximum allowable concentrations SMACs for contaminants and to review SMACs for various spacecraft contaminants to determine whether NASA's recommended exposure limits are consistent with the guidelines recommended by the subcommittee In response to this request the NRC first developed criteria and methods for preparing SMACs for spacecraft contaminants published in its 1992 report Guidelines for Developing Spacecraft Maximum

Allowable Concentrations for Space Station Contaminants Since then the NRC's Subcommittee on Spacecraft Maximum Allowable Concentrations has been reviewing NASA's documentation of chemical specific SMACs This report is the fourth volume in the series Spacecraft Maximum Allowable Concentrations for Space Station Contaminants The first volume was published in 1994 and the second and third in 1996 Spacecraft Maximum Allowable Concentrations for Selected Airborne Contaminants Volume 4 has been reviewed in draft form by individuals chosen for their technical expertise and diverse perspectives in accordance with procedures approved by the NRC's Report Review Committee for reviewing NRC and Institute of Medicine reports The purpose of that Independent review was to provide candid and critical comments to assist the NRC in making the published report as sound as possible and to ensure that the report meets institutional standards for objectivity evidence and responsiveness to the study charge The review comments and draft manuscript remain confidential to protect the integrity of the deliberative process
