**Disorders of the Monocyte Macrophage System** F. Schmalzl,D. Huhn,H. E. Schaefer,2012-12-06 The origin and function of normal monocytes and macrophages have been clearly defined by extensive investigations in human and in animal models The central importance of this cell system for the biological defense mechanisms is well established phagocytosis inactivation and destruction of organic and inorganic materials an important role in the initiation of humoral and cell mediated immunological responses and the secretion of a variety of chemical mediator and effector substances are the most important features of this ontogenetically ancient cell system However the data on this cellular system are rather recent and this may explain why relatively little attention has been paid to the pathology of the monocyte macrophage system MMS until now In addition this monograph should focus attention on the secondary physiological implications of the MMS in disorders not primarily originating from this system Several techniques are available to identify even abnormal individuals of this cell system and therefore can be employed for the study of severely altered or neoplastic monocytic cells

as MHC proteins and T cell receptors Summarizes growing data on immunoglobulin binding sites responsible for the reaction of immunoglobulins with molecules other than antigens Explores the rapid advance of recent biotechnological methods used for the construction of antibody molecules and their fragments with new properties Presents extensive references and is lavishly illustrated

**Macrophages** ,2000-09-14 Macrophages are an important part of the immune response and are characterized by their ability to phagocytose foreign matter However the difficulties involved in macrophage isolation mean they are some of the body s least explored cells Macrophage Methodology describes how to isolate moderate to high yields of viable cells from a variety of specific tissue sites under both normal and pathological conditions and then goes on to give protocols for macrophage purification The third chapter covers techniques used to identify and measure endocytic and phagocytic capabilities using immunochemistry and fluorescent analysis Chapter four identifies the key issues relating to the study of macrophages as antigen presenting cells and has protocols for the major assays used to measure antigen processing and presentation Also covered are the theoretical and practical issues related to the processing and presentation of intracellular pathogens for which macrophages are the major host cell The methods described for measuring macrophage secretory products concentrate on bioassays for molecules where no ELISA is available The next two chapters cover measuring macrophage activity in vitro and in vivo Finally methods are described for the analysis of gene expression in macrophages A variety of broad techniques have been brought together in one affordable volume to make Macrophage Methodology an essential buy for anyone studying macrophages
