**Handbook of Growth Factors** Enrique Pimentel,1994

*Handbook of Growth Factors* Enrique Pimentel,1994-06-02

Volume II of Handbook of Growth Factors presents a stimulating discussion of the best characterized polypeptide growth factors including insulin insulin like growth factors epidermal growth factor fibroblast growth factors neurotrophic growth factors and transforming growth factors The structure and function of each growth factor is discussed as well as its receptor and postreceptor mechanism of action and its role in neoplastic processes Regulatory peptides with growth factor like properties such as bombesin angiotensin endothelin atrial natriuretic factor vasoactive intestinal peptide and bradykinin are examined in depth Factors related to the growth of organs such as the prostate the heart and the mammary gland are also covered

**Peptide Growth Factors and Their Receptors I** Michael B. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone person to stay informed on this subject by reading the primary literature At the same time it is becoming increasingly apparent that these substances are of universal importance in biology and medicine and that the original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research This treatise is divided into four main sections After three introductory chapters its principal focus is the detailed description of each of the major peptide growth factors in 26 individual chapters

**Insulin-like Growth Factors** Derek LeRoith, 1991-05-28 During the past decade the continued interest in insulin related growth factors has been documented by a plethora of research programs and publications focused on these growth factors Both molecular and cellular biological techniques have improved and enabled investigators to study the properties of the growth factors in depth This volume covers the molecular genetic aspects of the growth factors their binding proteins and receptors as well as those factors affecting their gene transcription and translation In addition aspects of the cellular action of these growth factors through their receptors and how this impacts normal cellular function are discussed The book will provide valuable information for researchers in physiology biology endocrinology and metabolism

Growth Factors, Peptides, and Receptors Terry W. Moody, 2012-12-06 The Twelfth Annual Washington Spring Symposium on Health Sciences attracted over 300 scientists from 20 countries It was held at the Lisner Auditorium of the George Washington University in Washington D C during June 1 5 1992 The theme of the meeting was Growth Factors Peptides and

Receptors and speakers emphasized both basic and clinical research in these areas The seven plenary sessions emphasized Peptides Growth Factors Peptide Receptors Growth Factor Receptors Second Messengers Proliferation and Clinical Correlations The chapters in this volume are derived from each of these scientific sessions plus the poster and special sessions The Abraham White Distinguished Scientist Award was presented to Dr Solomon H Snyder for his numerous contributions to the field of neurochemistry He presented the keynote address Nitric Oxide A Novel Neuronal Messenger Dr Snyder discussed the pathway of nitric oxide NO synthesis by the enzyme NO synthase Released NO may be responsible for the neuronal toxicity associated with NMDA an excitatory amino acid analogue Dr Snyder noted that NO may be the first of a new class of transmitters with carbon monoxide being another candidate The Distinguished Public Service Award was presented to Senator Fritz Hollings in of his leadership and outstanding achievements in the United States Senate recognition and for his legislative support for biomedical research and education In the symposium banquet address Senator Hollings stressed the need for continued support of research to combat serious diseases such as cancer

**Growth Factors, Differentiation Factors, and Cytokines** Andreas Habenicht, 2012-12-06 Leading international experts contribute to this selection of reviews covering the merging fields of growth factors differentiation factors and cytokines These appear to play fundamental roles in a wide variety of physiological and pathophysiological processes that include the regulation of growth in normal and malignant cells embryogenesis the immune response wound healing inflammation and atherogenesis The major aspects of recent research and development are discussed providing an important update in this pioneering field

**Human Cancer in Primary Culture, A Handbook** John Masters, 2012-12-06 Growing human cancer cells in primary culture requires patience intuition care and experience This is one of the few areas where the wrinkled senior scientist can be more productive than the bright young post doc There are few mechanical aids no automated procedures and kits are unheard of There is no right way to do it and every tumour is different But this book will make it easier Chapter 1 on characterization is essential reading Much published work is useless because of the failure to take two simple steps to characterise the cells The first step is to fully record all the clinical data the absence of this information can render the work valueless The second step is to confirm the origin of the tissue to exclude cross contamination The wastage of years of work can be avoided with the use of a simple DNA preparation with a couple of commercially available probes Chapter 2 describes the development of serum free media This is a goal many would like to achieve particularly if someone else does it as it is laborious and empirical Defined serum free medium is essential for studies of growth factors and has major advantages in the commercial preparation of cell products and other applications

Handbook of Growth Factors Enrique Pimentel, 1994-06-02 Volume II of Handbook of Growth Factors presents a stimulating discussion of the best characterized polypeptide growth factors including insulin insulin like growth factors epidermal growth factor fibroblast growth factors neurotrophic growth factors and transforming growth factors The structure and function of each growth factor is discussed as well as its receptor and

*Molecular and Cellular Biology of Neuroprotection in the CNS* Christian Alzheimer, 2012-12-06 Given the very limited capacity of regeneration in the brain protecting neurons that are on the brink of death is a major challenge for basic and clinical neuroscience with implications for a broad spectrum of acute and chronic neurological and psychiatric diseases This book brings together leading experts from neurobiology neurophysiology neuropharmacology neuroimmunology and clinical neuroscience to highlight the most recent milestones in this rapidly evolving field The book will serve as a reference for both basic neuroscientists and clinicians interested in an authoritative update on the molecular and cellular biology of neuroprotection and its promises for new therapeutic strategies

**High-Grade Gliomas** Gene H. Barnett,2007-11-21 This is truly an exciting time in the field of neuro oncology particularly in the area of hi grade gliomas The management of patients with high grade gliomas has historically been one of the most challenging and disheartening fields in medicine where failure is the rule and longevity is the exception The jaded often state that despite purported advances in surgical and radiotherapeutic techniques and a myriad of clinical trials of medical therapies the s vival statistics for glioblastoma have not changed in the last three decades The nihilism associated with these tumors is such that some practitioners still advise against treatment or even biopsy recommending palliative care with the diagnosis based only on history and an MRI scan If the current state of the art in the diagnosis and management of high grade gliomas was truly so bleak there would be no reason to compile and publish a monograph on the subject The fact is that we have recently entered an era where real progress is being made in our understanding and treatment of high grade gliomas that is directly benefiting some patients We are slowly but surely chipping away at this problem One approach has exploited correlations between particular molecular markers and therapeutic response The first such breakthrough in high grade glioma was the observation that loss of chromosomes 1p and 19q uniformly predict chemosensitivity in anaplastic oligodendrogliomas 1

**Dermal Immune System** Brian J. Nickoloff,2019-06-04 First published in 1992 Dermal Immune System discusses the structural and functional characterizations of the dermal immune system including dermal dendritic cells monocyte macrophages microvascular endothelial cells pericytes veil cells fibroblasts mast cells dermal T lymphocytes and peripheral nerve endings This information is invaluable for gaining an understanding of how multicellular complex networks interface within the dermis and between the exogenous environment and endogenous milieu Specific examples are provided that document the involvement of the dermal immune system in the pathophysiology of several skin diseases that result from perturbation of normal cutaneous homeostasis Dermal Immune System is an excellent reference volume that should always be close at hand for immunologists cell biologists investigative dermatologists pathologists and clinicians involved in the care of patients with skin disease
