Handbook Of Aggressive And Destructive Behavior In Psychiatric Patients:

Handbook of Aggressive and Destructive Behavior in Psychiatric Patients Robert T. Ammerman, Michel Hersen, L.A. Sisson, 2012-12-06 Scarcely a day passes without the media detailing some form of human aggression whether it be on its grandest scale in the form of war random bombings and shootings in the streets torture in a prison camp murder by gangs wife abuse resulting in the murder of the husband or the physical abuse of children sometimes resulting in their death Frequently perpetrators of human aggression when arrested and tried in court resort to a psychiatric defense But are all such aggressors indeed appropriately psychiatric patients And if so what are their particular diagnoses and how do these relate to aggression Also of concern is aggression directed against self as evidenced in the rising incidence of suicide among young people or the self mutilation of patients suffering from certain personality disorders Both violence directed outward and aggression toward oneself pose considerable challenges to clinical management whether in the therapist's office or in the inpatient unit Although we have not been able to find successful deterrents to aggression a sizeable body of evidence does exist certainly of a descriptive nature Such data for psychiatric patients are scattered however and can be found in literatures as diverse as the biological ethological epidemiological legal philosophical psychological psychiatric and criminological Therefore given the increased frequency with which mental health professionals encounter cases of violence in their day to day work we believed it important that existing data be adduced in one comprehensive volume [Handbook of Psychological Approaches with Violent Offenders](#) Vincent B. Van Hasselt, Michel Hersen, 2013-11-11 The past quarter century has witnessed a dramatic upsurge of violent crime in the United States and abroad In this country the rise in violent criminal activity has been consistently documented in such published accounts as the Uniform Crime Reports and the Statistical Handbook on Violence in America published by the FBI and the Violence Research Group respectively Further social scientists particularly those working in the fields of sociology and psychology have provided a convergence of findings attesting to the magnitude of one of today's most significant social problems domestic violence e.g. spouse child and elder abuse Such efforts have served as the impetus for heightened clinical and investigative activity in the area of violent behavior Indeed a wide range of mental health experts such as psychologists psychiatrists social workers counselors and rehabilitation specialists have endeavored to focus on strategies and issues in research and treatment for violent individuals and their victims The purpose of this book is to provide a comprehensive and timely examination of current psychological approaches with violent criminal offenders Despite the fact that we continue to have much to learn about perpetrators of violent acts in recent an increasingly large body of empirical data have been adduced about this year's issue However these data generally have appeared in disparate journals and books That being the case it is our belief that such a handbook now is warranted **Handbook of Prescriptive Treatments for Adults** Robert T. Ammerman, Michel Hersen, 2013-11-11 This book could not have been conceptualized or published 20 years ago Indeed it is doubtful that we could have organized the

material for this handbook 10 years ago Over the last 20 years however the painstaking efforts of many clinical researchers working with a variety of resistive psychopathologies have resulted in specific psychotherapies and pharmacotherapies that are effective with a significant proportion of patients at least for some of the disorders Much clinical research remains to be carried out in the forthcoming decades But now that we are nearing the 21st century at least some statement about efficacy can be made In 1967 Gordon Paul succinctly stated that the ultimate goal of treatment outcome research is to determine What treatment by whom is most effective for this individual with that specific problem and under which set of circumstances p 111 At that time empirical evaluations of psychosocial and pharmacologic treatments were few and far between Methodological strategies for determining treatment effectiveness were also in the formative stage as exemplified by introduction of control groups that received inactive interventions i e placebo and the relatively recent practice of comparing two or more treatments in addition to placebo In the almost three decades since Paul's oft quoted dictum both the quantity and the quality of treatment outcome research with adults have increased dramatically

Beers,2013-06-29 In this volume of the series *Human Brain Function Assessment and Rehabilitation* we cover the area of how brain function is assessed with behavioral or neuropsychological instruments These assessments are typically conducted by clinical neuropsychologists or behavioral neurologists and so we made an effort to present the somewhat differing approaches to these two related disciplines Clinical neuropsychologists are psychologists who typically utilize standardized tests while behavioral neurologists are physicians who generally assess brain function as part of the clinical neurological evaluation Both approaches have much to offer The basic assumption of neuropsychological assessment is that the brain is the organ of behavior and therefore the condition of the brain may be evaluated with behavioral measures Neuropsychological tests are those measures found by research to be particularly sensitive to alterations in brain function An adequate neuropsychological test is a procedure that can be related to some objective measure of alteration in brain function Over the years these objective measures have changed but generally involve documentation through direct observation of brain tissue or through histological pathological neuroimaging
