Resnick,H.W. Schoenberg,J.E. Susset,N.R. Zinner,2012-12-06 For more than 60 years the Californian Family Hinman has exercised a very considerable influence on the development and practice of the highest grade of urology not only in the

American West but worldwide The leitmotiv of the Hinman School has been honest and thoughtful consideration of the problems of the genitourinary system gone awry Character is the quintessence of the Hinmans This virtue distinguishes the present volume on benign prostatic hypertrophy assembled and edited by Frank Hinman Jr I first came under the spell of Frank Hinman Sr via his classic studies of renal counterbalance In brief in an experimental animal the ureter of one kidney was ligated and the subsequent renal hypertrophy of its contralateral mate was studied quantitatively from anatomic and functional stand points There were two central questions in the Hinman study How does a normal kidney of an experimental animal recognize that its load has been doubled abruptly What is the signal for renal hypertrophy Benign hypertrophy of the prostate is quite different from compensatory hypertrophy of the kidney It is now known that benign prostatic hypertrophy BPH is not a hypertrophy but a benign tumor consisting of a collection of spheroids of micro and macrodimensions In technical terms BPH is an adenofibromyoma Perusal of the present volume will reveal many fascinating facets of BPH of particular interest to urologists and others with an investigative bent of BPH does not occur in children BPH occurs as a medical rarity in mind

Immunodiagnosis and Immunotherapy of Malignant Tumors H.-D. Flad, C. Herfarth, M. Betzler, 2012-12-06 The concept of immunologic responses against tumors is currently under intense scrutiny throughout the world The evidence for the existence of tumor specific transplantation antigens TSTA and specific immune reactions to them in experimental animals is overwhelming The available data concerning human tumors are controversial The reason for this is partially that antigens detectable on human tumors by in vitro assays have not been biologically characterized In other words we do not know if the antigens on human tumors are acting as the targets for immunologically mediated rejection processes in vivo It was the purpose of this workshop to bring experimental tumor immunologists and clinical oncologists together in order to disclose facts and limits in tumor immunology Clinicians were to learn how shaky the ground becomes once the experimentalist looks beyond the edge of the mouse cage Tumor biologists heard the clinicians urgent cry for controlled randomized trials of immunotherapy which thus reflects clearly that immunotherapy in its present form without knowledge of dose effect

relationship does not work Nobody would deny that the problem of human cancer smells of immunology but since we are just about to taste it the essential ingredient might be different In other words one might look at present rather at immunological epiphenomena than at mechanisms of tumor immunity operating in vivo This problem was among others a central issue of this workshop Integrating Complementary Medicine into Veterinary Practice Paula Jo Broadfoot, Richard E.

Palmquist, Karen Johnston, Jiu Jia Wen, Barbara Fougere, 2009-03-03 Integrating complementary treatment options with traditional veterinary practice is a growing trend in veterinary medicine Veterinarians and clients alike have an interest in expanding treatment options to include alternative approaches such as Western and Chinese Herbal Medicine Acupuncture Nano Pharmacology Homotoxicology and Therapeutic Nutrition along with conventional medicine Integrating Complementary Medicine into Veterinary Practice introduces and familiarizes veterinarians with the terminology and procedures of these complementary treatment modalities in a traditional clinical format that facilitates the easy integration of these methods into established veterinary practices **Advances in Cryogenic Engineering** K.D.
