Dickersin, 2006-04-28 This text atlas now in its second edition presents in simplest form the basic diagnostic criteria used by the electron microscopist in studying neoplasms and other diseases encountered in the routine practice of pathology Every field of electron microscopy is covered and low magnification plates are juxtaposed with higher magnifications to illustrate diagnostic features The largest section of the book is devoted to neoplasms as this is the area in which most diagnostic problems occur Renal glomerular disease is another important category in which ultrastructural study may be critical in diagnosis infectious diseases especially those of viral protozoan and unusual bacterial etiologies are a third area in which electron microscopy may be used to establish or substantiate a diagnosis All of these areas are comprehensively covered with concise readable text and more than 800 first quality images This book is the preeminent reference for pathologists needing current information on the role of ultrastructure in diagnostic pathology **Diagnostic Ultrastructural Pathology** Ann M. Dvorak, Rita A. Monahan-Earley, 1992-04-01 This problem based guide illustrates key reasoning processes that physicians use to resolve individual clinical problems through the use of electron microscopy Its format will facilitate learning the case approach for diagnostic ultrastructural pathology using clinical ultrastructural pathogenic correlation A total of 51 cases and a procedural guide for the ultrastructural pathology laboratory are included The cases were selected according to one of the following four principles 1 classic cases that were diagnosed readily by light

microscopy to facilitate the electron microscopic diagnosis of less classic cases 2 diagnostic cases those cases for which ultrastructural analysis was essential for the diagnosis 3 supportive cases which are those cases where either the light or the electron microscopic diagnosis is supportive and confirmatory to the other and 4 new facts cases which are those that establish new knowledge regarding the pathogenesis of disease using electron microscopy as the investigative modality The 51 cases are grouped anatomically in eight major categories Separate indices for presenting symptoms differential diagnostic groups ultrastructural pathology criteria and final diagnostic categories are provided as well This guide will be useful to physicians and students of medicine structure and disease It also makes an ideal operational guide and text for support staff training
