Ecological Restoration and Environmental Change Stuart K. Allison,2023-08-24 Ecological Restoration and Environmental Change presents an introduction to the practice of renewing and restoring degraded damaged or destroyed ecosystems and habitats in the environment The book addresses and challenges key issues which question the core values of the science and practice of restoration ecology The author explains that the process of restoration has always been defined by human choices and

examines the development of restoration practice to describe different models of restoration with respect to balancing ecological benefit and cultural value He develops ways to balance more actively these differing areas of concern while planning restorations This new edition has been fully revised and updated to reflect changes in the field and the new challenges posed to restoration ecology in the face of the rapid pace of climate change With strong coverage of North and South American Europe and Australia this new edition has been expanded to also address indigenous perspectives and restoration projects in Africa the Pacific Islands and Asia It places special emphasis on the need for restorationists to appreciate and understand the intricacies of planning and managing restorations in novel ecosystems Lastly it provides a critique of the new restoration standards published by the Society for Ecological Restoration in 2019 This book is essential reading for students on restoration ecology and conservation courses as well as professionals and practitioners working on restoration projects

Ecological Restoration Andre F. Clewell, James Aronson, 2012-07-26 The field of ecological restoration is a rapidly growing discipline that encompasses a wide range of activities and brings together practitioners and theoreticians from a variety of backgrounds and perspectives ranging from volunteer backyard restorationists to highly trained academic scientists and professional consultants Ecological Restoration offers for the first time a unified vision of ecological restoration as a field of study one that clearly states the discipline's precepts and emphasizes issues of importance to those involved at all levels In a lively personal fashion the authors discuss scientific and practical aspects of the field as well as the human needs and values that motivate practitioners The book identifies fundamental concepts upon which restoration is based considers the principles of restoration practice explores the diverse values that are fulfilled with the restoration of ecosystems reviews the structure of restoration practice including the various contexts for restoration work the professional development of its practitioners and the relationships of restoration with allied fields and activities A unique feature of the book is the inclusion of eight virtual field trips short photo essays of project sites around the world that illustrate various points made in the book and are led by those who were intimately involved with the project described Throughout ecological restoration is conceived as a holistic endeavor one that addresses issues of ecological degradation biodiversity loss and sustainability science simultaneously and draws upon cultural resources and local skills and knowledge in restoration work

Richardson, 2011-02-23 Invasion ecology is the study of the causes and consequences of the introduction of organisms to areas outside their native range Interest in this field has exploded in the past few decades Explaining why and how organisms are moved around the world how and why some become established and invade and how best to manage invasive species in the face of global change are all crucial issues that interest biogeographers ecologists and environmental managers in all parts of the world This book brings together the insights of more than 50 authors to examine the origins foundations current dimensions and potential trajectories of invasion ecology It revisits key tenets of the foundations of invasion ecology including contributions of pioneering naturalists of the 19th century including Charles Darwin and British ecologist Charles Elton whose 1958 monograph on invasive species is widely acknowledged as having focussed scientific attention on biological invasions **Handbook of Regenerative Landscape Design** Robert L. Hjerpe, Jesse Abrams, 2012-09-26 When it comes to implementing successful ecological restoration projects the social political economic and cultural dimensions are often as important as and sometimes more important than technical or biophysical knowledge Human Dimensions of Ecological Restoration takes an interdisciplinary look at the myriad human aspects of ecological restoration In twenty six chapters written by experts from around the world it provides practical and theoretical information analysis models and guidelines for optimizing human involvement in restoration projects Six categories of social activities are examined collaboration between land manager and stakeholders ecological economics volunteerism and community based restoration environmental education ecocultural and artistic practices policy and politics For each category the book offers an introductory theoretical chapter followed by multiple case studies each of which focuses on a particular aspect of the category and provides a perspective from within a unique social political cultural setting Human Dimensions of Ecological Restoration delves into the often neglected aspects of ecological restoration that ultimately make the difference between projects that are successfully executed and maintained with the support of informed engaged citizens and those that are unable to advance past the conceptual stage due to misunderstandings or apathy The lessons contained will be valuable to restoration veterans and greenhorns alike scholars and students in a range of fields and individuals who care about restoring their local lands and waters Dynamic Aquaria Walter H. Adey, Karen Loveland, 2011-08-29 In its third edition this praised book demonstrates how the living systems

modeling of aquatic ecosystems for ecological biological and physiological research and ecosystem restoration can produce answers to very complex ecological questions Dynamic Aquaria further offers an understanding developed in 25 years of living ecosystem modeling and discusses how this knowledge has produced methods of efficiently solving many environmental problems Public education through this methodology is the additional key to the broader ecosystem understanding necessary to allow human society to pass through the next evolutionary bottleneck of our species Living systems modeling as a wide spectrum educational tool can provide a primary vehicle for that essential step This third edition covers the many technological and biological developments in the eight plus years since the second edition providing updated technological advice and describing many new example aquarium environments Includes 16 page color insert with 57 color plates and 25% new photographs Offers 300 figures and 75 tables New chapter on Biogeography Over 50% new research in various chapters Significant updates in chapters include The understanding of coral reef function especially the relationship between photosynthesis and calcification The use of living system models to solve problems of biogeography and the geographic dispersal and interaction of species populations The development of new techniques for global scale restoration of water and atmosphere The development of new techniques for closed system sustainable aquaculture
