Taking one theme per chapter, the book examines the social and environmental influences that shape people's health: health inequalities, poverty and health, mental, emotional and spiritual health, sexual health, physical inactivity, diet, tobacco, alcohol, drugs, weight, cardiovascular disease, cancer, diabetes and dementia. The book takes a holistic approach, combining scientific and epidemiological evidence with the subjective experiences of those who undergo these health journeys. Each chapter explains the causes of poor health and the evidence behind the recommendations for good health and ends by demonstrating the health benefits of positive action. This is a core text for those studying health promotion or public health and a supplementary text for students of healthcare and social care. The book focusses on adults' health in the UK with examples from the four nations and provides some contextual international information where relevant. Priorities for Health Promotion and Public Health is an ideal companion for busy practitioners who work across the wider sectors that support people's health and wellbeing. It is also an essential textbook for students new to health promotion and public health.

**Health Promotion and Disease Prevention in Clinical Practice** Jessica Shank Coviello, 2019      **Handbook of Cultural Health Psychology** Shahe S. Kazarian, David R. Evans, 2001-08-24 The Handbook of Cultural Health Psychology discusses the influence of cultural beliefs, norms and values on illness, health and health care. The major health problems that are confronting the global village are discussed from a cultural perspective. These include heart disease, cancer, HIV/AIDS, pain and suicide. The cultural beliefs and practices of several cultural groups and the unique health issues confronting them are also presented. The cultural groups discussed include Latinos, Aboriginal peoples, people of African heritage and South Asians. The handbook contributes to increased personal awareness of the role of culture in health and illness behavior and to the delivery of culturally relevant health care services. Many societies are culturally diverse or becoming so; the cultural approach is a unique and necessary addition to the health psychology area. Satisfies the ever-increasing appetite of health psychologists for cultural issues in health and women's health issues. Major and global health concerns are covered, including heart disease, cancer, HIV/AIDS, pain, suicide and health promotion. The health beliefs and practices of Latinos, people of African heritage, Aboriginal peoples and South Asians are presented without stereotyping these cultural groups.
